APPENDIX E. NUCLEAR MOMENTS

Table 1 contains the nuclear magnetic and quadrupole moments from the *Table of Isotopes*. Most of these moments are from the compilation of Raghavan[1] except for values which have since been updated in the *Nuclear Data Sheets*. The nuclear species for which moments are reported are identified in the first four columns of Table 1. The level energies (in keV), half-lives, and spin/parities are given in columns 5-7. Magnetic dipole moments (μ), in column 8, are given in units of nuclear magnetons, and are based on the uncorrected proton moment, 2.79277564 *6* nm.[2] magnetic moments are corrected for diamagnetic shielding wherever applicable. Electric quadrupole moments (Q), in column 9, are given in units of barns. Signs of magnetic and quadrupole moments are given as reported by the original authors, and absence of a sign indicates that it is undetermined. Tabulated uncertainties are printed in italics. In some instances two possible moment values values exist and these are separated by "or".
