Preface XIII

List of Contributors XV

1	Spin-Polarized Scanning Tunneling Microscopy	1
	<i>Mathias Getzlaff</i>	
1.1	Introduction and Historical Background	1
1.2	Spin-Polarized Electron Tunneling: Considerations Regarding Planar Junctions	2
1.3	Spin-Polarized Electron Tunneling in Scanning Tunneling Microscopy (STM): Experimental Aspects	4
1.3.1	Probe Tips for Spin-Polarized Electron Tunneling	5
1.3.1.1	Ferromagnetic Probe Tips	5
1.3.1.2	Antiferromagnetic Probe Tips	8
1.3.1.3	Optically Pumped GaAs Probe Tips	10
1.3.1.4	Nonmagnetic Probe Tips	12
1.3.2	Modes of Operation	13
1.3.2.1	Constant Current Mode	13
1.3.2.2	Spectroscopy of the Differential Conductance	14
1.3.2.3	Local Tunneling Magnetoresistance	14
1.4	Magnetic Arrangement of Ferromagnets	15
1.4.1	Rare-Earth Metals: Gd/W(110)	15
1.4.2	Transition Metals: Co(0001)	17
1.5	Spin Structures of Antiferromagnets	18
1.5.1	Topological Anti-Ferromagnetism of Cr(001)	19
1.5.2	Magnetic Spin Structure of Mn with Atomic Resolution	23
1.6	Magnetic Properties of Nanoscaled Wires	26
1.7	Nanoscale Elements with Magnetic Vortex Structures	29
1.8	Individual Atoms on Magnetic Surfaces	31
1.9	Domain Walls	35
1.10	Chiral Magnetic Order	39
	References	42

2	Nanoscale Imaging and Force Analysis with Atomic Force Microscopy 49
	<i>Hendrik Hölscher, André Schirmeisen, and Harald Fuchs</i>
2.1	Principles of Atomic Force Microscopy 49
2.1.1	Basic Concept 49
2.1.2	Current Experimental Set-Ups 50
2.1.2.1	Sensors 50
2.1.2.2	Detection Methods 52
2.1.2.3	Scanning and Feedback System 53
2.1.3	Tip–Sample Forces in Atomic Force Microscopy 53
2.1.3.1	Van der Waals Forces 55
2.1.3.2	Capillary Forces 55
2.1.3.3	Pauli or Ionic Repulsion 55
2.1.3.4	Elastic Forces 56
2.1.3.5	Frictional Forces 57
2.1.3.6	Chemical Binding Forces 57
2.1.3.7	Magnetic and Electrostatic Forces 57
2.2	Modes of Operation 58
2.2.1	Static or Contact Mode 58
2.2.1.1	Force versus Distance Curves 59
2.2.2	Dynamic Modes 60
2.3	Amplitude Modulation (Tapping Mode) 61
2.3.1	Experimental Set-Up of AM-Atomic Force Microscopy 61
2.3.1.1	Theory of AM-AFM 63
2.3.1.2	Reconstruction of the Tip–Sample Interaction 69
2.3.2	Frequency-Modulation or Noncontact Mode in Vacuum 70
2.3.2.1	Set-Up of FM-AFM 72
2.3.2.2	Origin of the Frequency Shift 73
2.3.2.3	Theory of FM-AFM 75
2.3.2.4	Applications of FM-AFM 77
2.3.2.5	Dynamic Force Spectroscopy 78
2.4	Summary 81
	References 82
3	Probing Hydrodynamic Fluctuations with a Brownian Particle 89
	<i>Sylvia Jeney, Branimir Lukic, Camilo Guzman, and László Fórró</i>
3.1	Introduction 89
3.2	Theoretical Model of Brownian Motion in an Optical Trap 90
3.2.1	The General Langevin Equation for a Brownian Sphere in an Incompressible Fluid 90
3.2.1.1	The Random Thermal Force $F_{th}(t)$ 91
3.2.1.2	The Friction Force $F_{fr}(t)$ 91
3.2.1.3	The External Force $F_{ex}(t)$ 94
3.2.2	Solutions to the Different Langevin Equations for Cases Observable by OTI 94

3.2.2.1	Free Brownian Motion	94
3.2.2.2	Optically Confined Brownian Motion	97
3.2.3	Time Scales of Brownian Motion	99
3.3	Experimental Aspects of Optical Trapping Interferometry	100
3.3.1	Experimental Set-Up	100
3.3.1.1	Optical Trapping Interferometry and Microscopy Light Path	101
3.3.1.2	Sample Preparation	103
3.3.2	Position Signal Detection and Acquisition	103
3.3.3	Position Signal Processing	105
3.3.4	Temporal and Spatial Resolution of the Instrument	105
3.4	High-Resolution Analysis of Brownian Motion	108
3.4.1	Calibration of the Instrument	108
3.4.2	Influence of Different Parameters on Brownian Motion	109
3.4.2.1	Changing the Trap Stiffness	110
3.4.2.2	Changing the Fluid	111
3.4.2.3	Changing the Particle Density	113
3.4.3	Implications of the Existence of Long-time Tails in Nanoscale Experiments	113
3.4.3.1	Single Particle Tracking by OTI	114
3.4.3.2	Diffusion in OTI	114
3.4.3.3	Thermal Noise Statistics	116
3.5	Summary and Outlook	116
	References	118
4	Nanoscale Thermal and Mechanical Interactions Studies using Heatable Probes	121
	<i>Bernd Gotsmann, Mark A. Lantz, Armin Knoll, and Urs Dürig</i>	
4.1	Introduction	121
4.2	Heated Probes	122
4.3	Scanning Thermal Microscopy (SThM)	126
4.4	Heat-Transfer Mechanisms	129
4.4.1	Heat Transport Through the Cantilever Legs and Air	129
4.4.2	Heat Transfer Through Radiation	131
4.4.3	Thermal Resistance of a Water Meniscus	132
4.4.4	Heat Transfer Through a Silicon Tip	132
4.4.5	Thermal Spreading Resistance	138
4.4.6	Interface Thermal Resistance	139
4.4.7	Combined Heat Transport Through Tip, Interface and Sample	140
4.4.8	Heat-Transport Experiments Through a Tip–Surface Point Contact	141
4.5	Thermomechanical Nanoindentation	144
4.6	Application in Data Storage: The ‘Millipede’ Project	155
4.6.1	Writing	155
4.6.2	Reading	156
4.6.3	Erasing	156

4.6.4	Medium Endurance	158
4.6.5	Bit Retention	159
4.6.6	Tip Endurance	159
4.6.7	Data Rate	159
4.7	Nanotribology and Nanolithography Applications	161
4.7.1	Nanowear Testing	161
4.7.2	Nanolithography Applications	163
	References	166
5	Materials Integration by Dip-Pen Nanolithography	171
	<i>Steven Lenhart, Harald Fuchs, and Chad A. Mirkin</i>	
5.1	Introduction	171
5.2	Ink Transport	172
5.2.1	Theoretical Models for Ink Transport	173
5.2.2	Experimental Parameters Affecting Ink Transport	176
5.2.2.1	Driving Forces	176
5.2.2.2	Covalent Reaction with the Substrate	176
5.2.2.3	Noncovalent Driving Forces	177
5.2.2.4	Tip Geometry and Substrate Roughness	177
5.2.2.5	Humidity and Meniscus Formation	178
5.2.2.6	External Driving Forces	179
5.2.2.7	Thermal DPN	179
5.2.2.8	Electrochemical DPN	180
5.3	Parallel DPN	181
5.3.1	Passive Arrays	181
5.3.2	Active Arrays	181
5.4	Tip Coating	182
5.4.1	Methods for Inking Multiple Tips with the Same Ink	182
5.4.2	Ink Wells	183
5.4.3	Fountain Pens	184
5.4.4	Nanopipettes	184
5.5	Characterization	185
5.6	Applications Based on Materials Integration by DPN	187
5.6.1	Selective Deposition	187
5.6.2	Combinatorial Chemistry	189
5.6.3	Biological Arrays	190
5.7	Conclusions	193
	References	193
6	Scanning Ion Conductance Microscopy of Cellular and Artificial Membranes	197
	<i>Matthias Böcker, Harald Fuchs, and Tilman E. Schäffer</i>	
6.1	Introduction	197
6.1.1	Scanning Ion Conductance Microscopy	198
6.2	Methods	199

6.2.1	The Basic Set-Up	199
6.2.2	Nanopipettes	200
6.3	Description of Current–Distance Behavior	201
6.4	Imaging with SICM	202
6.4.1	Modulated Scan Technique	202
6.4.2	Cellular Membranes	203
6.4.3	Artificial Membranes	204
6.4.4	SICM with Shear Force Distance Control	206
6.5	Outlook	207
	References	209
7	Nanoanalysis by Atom Probe Tomography	213
	<i>Guido Schmitz</i>	
7.1	Introduction	213
7.2	Historical Development	215
7.3	The Physical Principles of the Method	216
7.3.1	Field Ionization and Evaporation	216
7.3.2	Ion Trajectories and Image Magnification	220
7.3.3	Tomographic Reconstruction	223
7.3.4	Accuracy of the Tomographic Reconstruction	226
7.4	Experimental Realization of Measurements	230
7.4.1	Position-Sensitive Ion Detector Systems	230
7.4.2	Instrumental Design of 3-D Atom Probes	233
7.4.3	Specimen Preparation	236
7.5	Exemplary Studies Using Atom Probe Tomography	238
7.5.1	Nucleation of the First Product Phase	239
7.5.2	Thermal Stability of Giant Magnetoresistance Sensor Layers	242
7.5.3	Influence of Grain Boundaries and Curved Interfaces	245
7.6	Approaching Nonconductive Materials: Pulsed Laser Atom Probe Tomography	248
7.6.1	The Limitations of High-Voltage Pulsing	248
7.6.2	The Mechanism of Pulsed Laser Evaporation	249
7.6.3	Application to Microelectronic Devices	252
	References	255
8	Cryoelectron Tomography: Visualizing the Molecular Architecture of Cells	259
	<i>Dennis R. Thomas and Wolfgang Baumeister</i>	
8.1	Introduction	259
8.2	Basic Principles and Challenges of Electron Tomography	260
8.3	Automated Cryoelectron Tomography	262
8.4	Resolution, Signal-to-Noise Ratio and Visualization of Tomograms	263
8.5	Merging High Resolution with Low: The Molecular Interpretation of Cryotomograms	265

8.5.1	Specific Labeling	266
8.5.2	Pattern Recognition	268
8.6	Creating Template Libraries	269
8.7	Outlook	270
	References	270
9	Time-Resolved Two-Photon Photoemission on Surfaces and Nanoparticles	273
	<i>Martin Aeschlimann and Helmut Zacharias</i>	
9.1	Introduction	273
9.2	Theoretical Background	274
9.2.1	Electron–Electron Interaction	275
9.2.2	Plasmonic Processes	276
9.2.3	Two-Temperature Model	277
9.2.4	Electron–Phonon Coupling	278
9.3	Experimental	280
9.4	Relaxation of Excited Carriers	285
9.5	Volume Excitation in Metallic Nanostructures Investigated by TR-PEEM	289
9.6	Long-Lived Resonances in Adsorbate/Substrate Systems	293
9.7	Outlook: Spatial and Temporal Control of Nano-Optical Fields	298
	References	300
10	Nanoplasmonics	307
	<i>Gerald Steiner</i>	
10.1	Introduction	307
10.2	Single Clusters	308
10.3	Nanoshells	312
10.4	Layer of Clusters	312
10.5	Surface-Enhanced Spectroscopy	316
10.5.1	Surface-Enhanced Raman Scattering	316
10.5.2	Surface-Enhanced Fluorescence	319
10.5.3	Surface-Enhanced Infrared Absorption Spectroscopy	320
10.6	Biosensing	321
	References	323
11	Impedance Analysis of Cell Junctions	325
	<i>Joachim Wegener</i>	
11.1	A Short Introduction to Cell Junctions of Animal Cells	325
11.1.1	Cell Junctions for Mechanical Stability of the Tissue	326
11.1.1.1	Adherens Junctions	327
11.1.1.2	Desmosomes	327
11.1.1.3	Focal Contacts	327
11.1.1.4	Hemi-Desmosomes	328
11.1.1.5	Less-Prominent Types of Mechanical Junctions	328

11.1.2	Cell Junctions Sealing Extracellular Pathways: Tight Junctions	328
11.1.3	Communicating Junctions: Gap Junctions and Synapses	329
11.1.3.1	Chemical Synapses	329
11.1.3.2	Gap Junctions	329
11.2	Established Physical Techniques to Study Cell Junctions	330
11.2.1	Cell–Matrix Junctions	330
11.2.1.1	Scanning Probe Techniques	330
11.2.1.2	Nonscanning Microscopic Techniques	331
11.2.1.3	Fluorescence Interference Contrast Microscopy	331
11.2.1.4	Total Internal Reflection (Aqueous) Fluorescence Microscopy	331
11.2.1.5	Quartz Crystal Microbalance	332
11.2.1.6	Other Techniques	332
11.2.2	Cell–Cell Junctions	333
11.2.2.1	Tight Junctions	333
11.2.2.2	Gap Junctions	334
11.3	Impedance Spectroscopy	335
11.3.1	Fundamental Relationships in Impedance Analysis	336
11.3.2	Data Representation and Analysis	337
11.4	Impedance Analysis of Cell Junctions	340
11.4.1	General Remarks about Experimental Issues	340
11.4.1.1	Two-Probe versus Four-Probe Measurement	340
11.4.1.2	Introducing Electrodes for Impedance Readings into an Animal Cell Culture	340
11.4.1.3	Experimental Set-Up	343
11.4.2	Time-Resolved Impedance Measurements at Designated Frequencies	344
11.4.2.1	<i>De novo</i> Formation of Cell–Matrix and Cell–Cell Junctions	347
11.4.2.2	Modulation of Established Cell Junctions	350
11.4.3	Modeling the Complex Impedance of Cell-Covered Electrodes	352
11.4.4	Spectroscopic Characterization of Cell–Cell and Cell–Matrix Junctions	354
	References	356
