| Foreword | XXIX |
| Preface | XXXIII |
| List of Contributors | XXXVII |

Volume 1: Probing Matter

Part I: General

| | | |
|----------|---|----------|
| 1 | Principles of Lasers | 3 |
| | <i>Hans-Jochen Foth</i> | |
| 1.1 | Introduction | 3 |
| 1.2 | Physical Principles | 5 |
| 1.2.1 | Light | 5 |
| 1.2.2 | Amplification | 6 |
| 1.2.3 | Stimulated Emission | 6 |
| 1.2.4 | Population Inversion and Enhancement of the Light Field | 7 |
| 1.2.5 | Stimulated Emission Stronger than Absorption | 7 |
| 1.2.6 | Stimulated Emission Stronger than Spontaneous Emission | 8 |
| 1.2.7 | Laser Threshold | 8 |
| 1.2.8 | Resonator Modes | 10 |
| 1.2.9 | Homogenous and Inhomogeneous Broadening | 14 |
| 1.2.10 | Continuous and Pulsed Laser Operation | 14 |
| 1.3 | Technical Realization | 18 |
| 1.3.1 | Solid-State Lasers | 18 |
| 1.3.2 | Gas Lasers | 20 |
| 1.3.3 | Dye Lasers | 24 |
| 1.3.4 | Semiconductor Lasers | 24 |
| 1.3.5 | Free-Electron Laser | 27 |
| 1.3.6 | Optical Parametric Oscillator | 28 |
| 1.3.7 | Frequency Doubling and Generation of Higher Harmonics | 28 |
| 1.4 | Quality of Laser Light Compared to Light of a Conventional Light Source | 31 |

VI | Contents

| | |
|----------|---|
| 2 | Laser Safety 33 |
| | <i>Friedrich Röhrbacher</i> |
| 2.1 | Introduction 33 |
| 2.2 | Basic Information about Laser Radiation 34 |
| 2.2.1 | Special Properties of Laser Light 34 |
| 2.2.2 | Wavelength, Energy and Power 35 |
| 2.2.3 | Pulsed Lasers 36 |
| 2.2.4 | Divergence and Solid Angle 38 |
| 2.2.5 | Geometrical Aspects 39 |
| 2.2.6 | Optical Instruments 41 |
| 2.3 | Interaction between Radiation and Matter 41 |
| 2.3.1 | Wavelength Dependency 41 |
| 2.3.2 | The Human Eye 44 |
| 2.3.3 | The Human Skin 46 |
| 2.4 | Limits and Classifications 46 |
| 2.5 | Summary and Outlook 49 |

Part II: Lasers as Probes in Chemistry

| | |
|----------|--|
| 3 | Overview 53 |
| | <i>Maximilian Lackner</i> |
| 3.1 | Introduction 53 |
| 3.2 | Lasers for Sampling Purposes 54 |
| 3.3 | Lasers in Spectroscopic Techniques 55 |
| 3.4 | Properties that Can be Measured with Lasers 60 |
| 3.5 | Highlights of 'Lasers as Probes' from this Book Volume 60 |
| 3.5.1 | Chemical Sensors Based on Quantum Cascade Lasers 60 |
| 3.5.2 | Laser Diagnostics of Combustion Processes 62 |
| 3.5.3 | LIDAR for Ground- and Airborne Trace Gas Detection 62 |
| 3.5.4 | Nonlinear Spectroscopy 62 |
| 3.5.5 | Photoacoustic Spectroscopy (PAS) 63 |
| 3.5.6 | Tunable Diode Laser Absorption Spectroscopy (TDLAS) 63 |
| 3.5.7 | Applications of Tunable Diode Laser Absorption Spectroscopy in Process Industries 63 |
| 3.5.8 | Laser-induced Breakdown Spectroscopy (LIBS) 64 |
| 3.5.9 | Laser Doppler Anemometry (LDA) 64 |
| 3.5.10 | Cavity Ringdown Spectroscopy in Chemistry (CRDS) 64 |
| 3.5.11 | Laser Spectroscopy Applied to Catalysis Research 64 |
| 3.5.12 | Speciation Analysis Using Lasers 65 |
| 3.5.13 | Laser Enhanced Spectroscopy and Coherent Control 65 |
| 3.5.14 | Laser-induced Fluorescence Spectroscopy (LIF) 65 |
| 3.5.15 | Laser Applications in Combustion Engine R&D 66 |
| 3.5.16 | Raman Spectroscopy 66 |
| 3.5.17 | MALDI 66 |
| 3.5.18 | MALDI-MS of Industrial Chemicals and Polymers 67 |

| | | |
|----------|---|------------|
| 3.5.19 | Atmospheric-pressure Laser Ionization (APLI) | 67 |
| 3.5.20 | High-resolution Molecular Spectroscopy in Low-temperature Crystalline Matrices | 67 |
| 4 | Chemical Sensing Using Quantum Cascade Lasers | 77 |
| | <i>Christina Young, Seong-Soo Kim, and Boris Mizaikoff</i> | |
| 4.1 | Introduction | 77 |
| 4.2 | Quantum Cascade Laser Theory | 79 |
| 4.2.1 | Basic Operation Principles | 79 |
| 4.2.2 | QCL Active Region Structure | 81 |
| 4.2.3 | Lasing Cavity Structure and Wavelength Tuning | 83 |
| 4.3 | Quantum Cascade Laser-based Gas Phase Chemical Sensors | 87 |
| 4.3.1 | Direct Absorption | 87 |
| 4.3.2 | Multipass Gas Cells | 89 |
| 4.3.3 | Cavity-enhanced Sensing Strategies | 91 |
| 4.3.4 | Photoacoustic Spectroscopy | 93 |
| 4.3.5 | Hollow Waveguide Sensors | 95 |
| 4.4 | Quantum Cascade Laser-based Liquid Phase Chemical Sensors | 98 |
| 4.4.1 | Transmission Absorption-based Sensing | 98 |
| 4.4.2 | Evanescence Field-based Sensing | 100 |
| 4.5 | Outlook | 102 |
| 4.6 | Summary | 103 |
| 5 | Laser Diagnostics of Combustion Processes | 109 |
| | <i>Johan Hult</i> | |
| 5.1 | Introduction | 109 |
| 5.2 | Principles of Combustion Diagnostics | 111 |
| 5.2.1 | Techniques | 111 |
| 5.2.2 | Approaches | 112 |
| 5.3 | Combustion Applications | 115 |
| 5.3.1 | Fundamental Applications | 115 |
| 5.3.2 | Industrial Applications | 120 |
| 5.4 | Outlook | 124 |
| 5.5 | Summary | 125 |
| 6 | LIDAR for Ground- and Airborne Trace Gas Detection | 131 |
| | <i>Michal Střížík, Zdeněk Zelinger, Venkataraman Sivakumar, and Pavel Engst</i> | |
| 6.1 | LIDAR as a LASER Remote Sensing Tool for Atmospheric Measurements | 131 |
| 6.2 | LIDAR Principle | 132 |
| 6.2.1 | Light–Matter Interaction | 133 |
| 6.2.2 | Lidar Equation | 140 |
| 6.3 | Differential Absorption LIDAR (DIAL) | 141 |
| 6.3.1 | DIAL Equation | 142 |
| 6.3.2 | Accuracy and Detection Limits | 143 |

VIII | Contents

- 6.3.3 Laser Excitation Sources for DIALs 148
- 6.3.4 DIAL System Design 150
- 6.4 LIDAR Applications 155
 - 6.4.1 Trace Gas Monitoring 156
 - 6.4.2 Meteorological Measurements 162
 - 6.4.3 Environmental Applications 165

- 7 Nonlinear Spectroscopy and Coherent Multidimensional Spectroscopy 173**
John C. Wright
 - 7.1 Introduction 173
 - 7.2 Background 174
 - 7.2.1 Phenomenological Model of Nonlinear Spectroscopy 174
 - 7.2.2 Quantum Mechanical Model for Nonlinear Spectroscopy 176
 - 7.2.3 Free Induction Decay and Quantum Beating 179
 - 7.2.4 Rabi Oscillations, Optical Nutation and Dynamic Stark Effects 179
 - 7.2.5 Role of Vacuum Fluctuations in Spectroscopy 180
 - 7.2.6 Coherence Pathways in Different Nonlinear Spectroscopies 181
 - 7.2.7 Second Harmonic Generation (SHG), Sum Frequency Generation (SFG), Difference Frequency Generation (DFG) and Optical Rectification 181
 - 7.2.8 Coherent Raman Spectroscopies 183
 - 7.2.9 Stimulated Fluorescence, Stimulated Raman, Pump–Probe Spectroscopies and Time-resolved Pump–Probe Spectroscopies 186
 - 7.2.10 Photon Echo, Stimulated Photon Echo, Transient Grating, Reverse Photon Echo and Reverse Transient Grating Spectroscopies 188
 - 7.2.11 Incoherent Fluorescence and Raman Spectroscopies and Their Relationship to Coherent Spectroscopies 190
 - 7.2.12 Coherent Multidimensional Spectroscopies 190
 - 7.3 Representative Examples of Nonlinear Spectroscopies 192
 - 7.3.1 Coherent Raman Experiments 192
 - 7.3.2 Coherent Multidimensional Four-wave Mixing in the Frequency Domain 198
 - 7.3.3 Coherent Multidimensional Vibrational Four-wave Mixing in the Time-domain Two-dimensional Infrared (2D-IR) Spectroscopy 204
 - 7.3.4 Higher-order Nonlinear Spectroscopies 214
 - 7.4 Outlook 218
 - 7.5 Summary 219

- 8 Photoacoustic Spectroscopy 227**
Zdenek Zelinger and Michal Střížik
 - 8.1 List of Symbols 227
 - 8.2 Principles of Laser Photoacoustic Spectroscopy 229
 - 8.3 Trace Detection of Gases and Vapors 231
 - 8.4 Effects of Relaxation Processes 237

- 8.5 Photoacoustic Effect and Chemical Kinetics 238
- 8.6 Photoacoustic Raman Spectroscopy 242
- 8.7 Laser Photoacoustic Spectroscopy of Condensed Matter 243
- 8.8 Conclusion 248
- 9 Tunable Diode Laser Absorption Spectroscopy 255**
Peter Werle, Francesco D'Amato, and Silvia Viciani
- 9.1 Semiconductor Lasers 255
- 9.2 Principles of Diode Laser Spectroscopy 258
- 9.2.1 Line Parameters and Selection of Absorption Lines 258
- 9.2.2 Direct Absorption and Modulation Spectroscopy 259
- 9.3 System Design Criteria 260
- 9.3.1 Optical Design and Fringes 260
- 9.3.2 Calibration, Data Processing and System Performance 263
- 9.4 Field Laser Applications in Atmospheric Research 264
- 9.4.1 Trace Gas Flux Measurements 264
- 9.4.2 Airborne Atmospheric Measurements 266
- 9.5 Outlook 268
- 9.6 Summary 269
- 10 Applications of TDLAS in Process Industries 277**
Michael Markus
- 10.1 Introduction to Process Industry 277
- 10.2 The Role of Analytics in the Process Industry 278
- 10.2.1 General Aspects of Process Gas Analytics 278
- 10.2.2 The Impact of TDLAS to Process Gas Analytics 280
- 10.2.3 Aspects of the Industrialization of TDLAS 284
- 10.3 Selected Applications of TDLAS in Process Industries 289
- 10.3.1 TDLAS Applications in the Combustion Industry 289
- 10.3.2 TDL Applications in Flue Gas Cleaning and Emission Monitoring 295
- 10.3.3 Safety Surveillance and Asset Protection by TDLAS 302
- 10.3.4 Applications in Chemical and Petrochemical Industry 304
- 10.3.5 TDLAS Applications in Metallurgy 307
- 10.3.6 Further Process Applications 309
- 10.3.7 Outlook on Future Trends and Technologies in Laser-based Process Analytics 310
- 11 Laser-induced Breakdown Spectroscopy (LIBS) 313**
Michael J. Myers, John D. Myers, and Abbey G. Myers
- 11.1 Introduction 313
- 11.2 Basic Principles and History of Laser Plasma Spectroscopy 313
- 11.3 Laser Plasma Generation 317
- 11.3.1 Detector Timing and Multiple Pulse LIBS 317
- 11.3.2 Laser Material Interaction 318
- 11.3.3 Power Density, Pulse Width and Color Temperature 319

x | Contents

- 11.4 Qualitative Analysis 319
 - 11.4.1 Emission Line Analysis 319
 - 11.4.2 Host Influence on Emission Line Spectra and Detection Limits 321
- 11.5 Quantitative Analysis 322
 - 11.5.1 Software Calibration Techniques 322
 - 11.5.2 Neighbor Peak Ratio Comparison 324
- 11.6 Applications 324
- 11.7 Outlook and Summary 325

12 Laser Doppler Anemometry 331

Bodo Ruck

- 12.1 Introduction 331
- 12.2 Fundamental Principle 332
- 12.3 LDA Arrangements 338
- 12.4 Directional Sensitivity 339
- 12.5 Two-dimensional and Three-dimensional Measuring Systems 342
- 12.6 Signal Processing 343
 - 12.6.1 Counter Processors 344
 - 12.6.2 Autocorrelation-based Processors 344
 - 12.6.3 Processors Based on Fast Fourier Transform (FFT) 345
- 12.7 Particle Seeding 345
- 12.8 Signal Detection 348
- 12.9 Sources of Errors 350
 - 12.9.1 Biasing 350
 - 12.9.2 Velocity Gradient Broadening 351
 - 12.9.3 Finite Transit Time Broadening 351
 - 12.9.4 Nonparallel Interference Planes 351
 - 12.9.5 Perturbated Interference Planes 351
- 12.10 Application of Laser Doppler Anemometry 352
- 12.11 List of Symbols 353

13 Cavity Ring-down Spectroscopy in Chemistry 359

Lineke van der Sneppen, Cees Gooijer, Wim Ubachs, and Freek Ariese

- 13.1 Introduction 359
 - 13.1.1 Increasing the Sensitivity of Absorption Spectroscopy 360
 - 13.1.2 Cavity Ring-down Spectroscopy 362
- 13.2 CRDS in Gas-phase Measurements 364
 - 13.2.1 Pulsed Laser CRDS 364
 - 13.2.2 Continuous-wave CRDS 369
 - 13.2.3 Cavity-enhanced Techniques: CEAS or ICOS 372
 - 13.2.4 Special Applications of CRDS 373
- 13.3 Condensed-media CRDS 376
 - 13.3.1 Studying Solid-phase Samples with CRDS 377
 - 13.3.2 Studying Liquid-phase Samples with CRDS 378

- 13.3.3 Incoherent Broadband Cavity-enhanced Absorption Spectroscopy:
IBBCEAS 381
- 13.3.4 CRDS Absorption Detection in Liquid Chromatography 382
- 13.3.5 Fibers for CRDS Measurements 385
- 13.4 Evanescent-wave CRDS 388
- 13.4.1 Applications of EW-CRDS to the Gas Phase 389
- 13.4.2 Applications of EW-CRDS to Condensed Media 392
- 13.5 Future Trends and Perspectives 395

- 14 Laser Spectroscopy Applied to Catalysis Research 403**
Janusz Ryczkowski
- 14.1 Introduction 403
- 14.2 Instrumentation 405
- 14.3 Applications in Research 410
- 14.4 Applications in Industry 415
- 14.5 Outlook 416
- 14.6 Summary 416

- 15 Speciation Analysis Using Lasers 423**
Gerhard Geipel
- 15.1 Introduction 423
- 15.2 Methods 423
- 15.2.1 Laser-induced Photoacoustic Spectroscopy (LIPAS) 424
- 15.2.2 Laser-induced Thermal Lens Spectroscopy (TLS) 426
- 15.2.3 Time-resolved Laser-induced Fluorescence Spectroscopy
(TRLIFS) 426
- 15.3 Excitation and Emission of Fluorescent Lanthanides 429
- 15.4 Excitation and Emission of Fluorescent Actinides 430
- 15.4.1 Protactinium 430
- 15.4.2 Uranium 431
- 15.4.3 Americium(III) 431
- 15.4.4 Curium 432
- 15.4.5 Other Actinides 433
- 15.5 Detection Limits 433
- 15.6 Outlook 434

- 16 Laser-enhanced Spectroscopy and Coherent Control 439**
Debabrata Goswami
- 16.1 Introduction 439
- 16.2 Theoretical Developments 440
- 16.2.1 Ultrafast Pulse Shaping 440
- 16.2.2 Two-level Model 441
- 16.2.3 Multilevel IVR Model 443
- 16.3 Experimental Results 446

xii | Contents

- 16.3.1 Ultrafast Laser Phase Modulation 446
- 16.3.2 Ultrafast Pulse Characterization 449
- 16.3.3 Propagational Aspects of Ultrafast Shaped Pulses 451
- 16.4 Applications 453
- 16.5 Future Perspective 456
- 16.6 Summary 458

- 17 Laser-induced Fluorescence (LIF) Spectroscopy 463**
Prakash D. Naik, Awadhesh Kumar, Hari P. Upadhyaya, Parma Nand Bajaj, and Sisir K. Sarkar
- 17.1 Introduction 463
- 17.2 Basic Principles of LIF 465
- 17.3 General Experimental Aspects 471
- 17.3.1 2D- and 3D-LIF 474
- 17.4 Application of LIF 475
- 17.4.1 Photodissociation Dynamics 475
- 17.4.2 Kinetics of Atmospheric Reactions 491
- 17.4.3 Ultra Trace Analysis 493
- 17.5 Industrial and Future Applications of LIF 494
- 17.5.1 Diode Laser-based Two-line Atomic Fluorescence (TLAF) Thermometry 494
- 17.5.2 Application for Defense and Security 495
- 17.5.3 Medicinal Chemistry 496
- 17.5.4 LIF in Capillary Electrophoresis 496
- 17.6 Conclusions 497
- 17.7 List of Symbols 497
- 17.7.1 Greek Symbols 497
- 17.7.2 Symbols 498

- 18 Laser Applications in Combustion Engine Research and Development 503**
Ernst Winklhofer, Heribert Fuchs, and Alexander Morozov
- 18.1 Introduction –Degrees of Freedom in Engine R&D 503
- 18.2 Basic Engine Processes 503
- 18.2.1 Piston–Crankshaft Motion 503
- 18.2.2 Engine Strokes 504
- 18.2.3 The Four-stroke and Two-stroke Principle 505
- 18.2.4 Spark Ignition and Compression Ignition 505
- 18.2.5 Combustion 505
- 18.3 Areas of Interest in Engine R&D and Identification of Tasks for Laser Supported Diagnostics 506
- 18.3.1 Specific Topics in Engine Combustion Development 506
- 18.4 Laser Techniques for Combustion-related Engine Analysis 506
- 18.4.1 Lasers for Illumination 506
- 18.4.2 Application Packages 509

- 18.4.3 Optical Access into the Engine Combustion Chamber 511
- 18.5 Flow Velocity Measurement 515
- 18.5.1 Velocity Measurement Requirements in Combustion Engine Engineering 516
- 18.5.2 Flow Velocity Measurement Examples 517
- 18.6 Species Identification and Concentration Measurement 521
- 18.6.1 Laser-induced Fluorescence –(LIF) 521
- 18.6.2 Signal Intensity 522
- 18.6.3 LIF Techniques to Support DGI Engine Mixture Formation 522
- 18.7 Interferometry in High-Pressure Liquid Flow Research 527

- 19 Raman Spectroscopy 531**
Maurizio Musso and Karl-Ludwig Oehme
- 19.1 Introduction 531
- 19.2 Theory 532
- 19.2.1 The Raman Effect 532
- 19.2.2 Selection Rules 535
- 19.2.3 Vibrations of Polyatomic Molecules and Group Frequencies 537
- 19.2.4 Depolarization Ratios 538
- 19.2.5 Isotropic and Anisotropic Raman Scattering 541
- 19.3 Experiment 544
- 19.3.1 Multichannel and Multiplex Spectrometers 544
- 19.3.2 Lasers 545
- 19.3.3 Dispersive Raman Spectrometers 546
- 19.3.4 Fourier Transform Infrared Raman Spectrometers 550
- 19.3.5 Calibration and Spectra Processing 551
- 19.3.6 Enhancements of Raman Spectroscopy 553
- 19.4 Applications in Research 554
- 19.4.1 Band Shapes in Molecular Liquids 554
- 19.4.2 Raman Spectroscopic Studies of Biomaterials 568
- 19.5 Applications in Industry and in Applied Sciences 573
- 19.5.1 Process Applications and Pharmaceutical Applications 573
- 19.5.2 Biological and Biomedical Applications 574
- 19.5.3 Solid-State and Materials Science Applications 575
- 19.5.4 Forensic Science Applications, Art and Heritage Applications 577
- 19.6 Outlook 578
- 19.7 Summary 579

- 20 Matrix-assisted Laser Desorption/Ionization Mass Spectrometry: Principles and Applications in Life Sciences 593**
Sascha Sauer
- 20.1 Introduction 593
- 20.2 MALDI Analysis 595
- 20.3 Laser Systems for MALDI 599
- 20.4 Fragmentation Processes in MALDI 601

XIV Contents

- 20.5 Matrices 605
- 20.6 Preparation Procedures 606
- 20.7 Alternative Laser Desorption Ionization Mass Spectrometry Methods 608
- 20.8 Applications of MALDI 609
 - 20.8.1 Application I: MALDI Detection and Characterization of Peptides and Proteins 609
 - 20.8.2 Application II: MALDI Imaging 611
 - 20.8.3 Application III: MALDI Detection of Nucleic Acids 612
- 20.9 Final Note 613

21 MALDI-MS of Industrial Chemicals and Polymers 617

Joachim R. Wesener

- 21.1 Introduction 617
 - 21.1.1 Mass Spectrometry of Industrial Chemicals and Synthetic Polymers 618
 - 21.1.2 Lasers and Soft Ionization Molecular Mass Spectrometry 619
 - 21.2 Soft Laser Desorption and Ionization with MALDI 620
 - 21.2.1 Influence of Chemical Properties on Sample Preparation 621
 - 21.2.2 Laser Desorption versus Laser Ablation 621
 - 21.2.3 Matrix-assisted Ion Formation in the MALDI Plume 622
 - 21.3 Mass Analysis 623
 - 21.3.1 Resolution, Accuracy and Discrimination Effects 623
 - 21.3.2 Molecular Mass, Empirical Formula, Endgroups and Repeating Units 623
 - 21.3.3 MALDI Mass Spectrum Interpretation 624
 - 21.3.4 Chemical Noise, Matrix Related Signals and Fragmentation 625
 - 21.4 Characterization of Small Molecules and Oligomers 626
 - 21.4.1 Dyes and Pigments 626
 - 21.4.2 Photofading of Ballpoint Dyes on Paper 628
 - 21.4.3 Organometallics 628
 - 21.4.4 Fullerenes, Polycyclic Aromatic Hydrocarbons and Related Compounds 629
 - 21.4.5 Surfactants, Oleochemicals and Vegetable Oils 631
 - 21.5 Chemical Analyses of Industrial Polymers 631
 - 21.5.1 Polyethers, Polyesters and Industrial Polyols 632
 - 21.5.2 Polyamides, Polyisocyanates and Polyurethanes 632
 - 21.5.3 Polystyrenes and Polycarbonates 633
 - 21.5.4 Polymers Based on Silicon 633
 - 21.6 Hyphenated Techniques 634
 - 21.6.1 Combination of MALDI-MS with Chromatography 634
 - 21.6.2 Tandem Mass Spectrometry (MS/MS) 634
 - 21.7 Outlook 635
 - 21.8 Conclusions 635

| | | |
|-----------|---|-----|
| 22 | Atmospheric-pressure Laser Ionization | 639 |
| | <i>Oliver J. Schmitz and Thorsten Benter</i> | |
| 22.1 | Introduction | 639 |
| 22.2 | Theory | 641 |
| 22.2.1 | Laser Ionization: Principle | 641 |
| 22.2.2 | Atmospheric-pressure Laser Ionization: Principle | 642 |
| 22.2.3 | Spectroscopy of Aromatic Hydrocarbons | 644 |
| 22.3 | Applications in Research | 645 |
| 22.3.1 | APLI as an Ionization Source for HPLC-TOF(MS) | 645 |
| 22.3.2 | APLI as an Ionization Source for GC-(TOF)MS | 646 |
| 22.4 | Applications in Industry | 649 |
| 22.5 | Outlook | 650 |
| 22.6 | Summary | 651 |
| | | |
| 23 | High-Resolution Molecular Spectroscopy in Low-Temperature Crystalline Matrices | 655 |
| | <i>Joost S. de Klerk, Huiyong Wang, Andres D. Campiglia, Cees Gooijer, and Freek Ariese</i> | |
| 23.1 | Introduction | 655 |
| 23.2 | Theory: Achieving High-Resolution Spectra According to Shpol'skii | 657 |
| 23.3 | Experimental Parameters and Instrumentation | 661 |
| 23.3.1 | Sample Freezing Procedures | 661 |
| 23.3.2 | Instrumentation for Shpol'skii Fluorescence Measurements | 662 |
| 23.3.3 | Instrumentation for Shpol'skii Absorption Measurements | 664 |
| 23.4 | Research Applications | 668 |
| 23.4.1 | Analytical Method Development | 668 |
| 23.4.2 | Environmental and Bioanalytical Chemistry | 673 |
| 23.4.3 | Physical Chemistry | 682 |
| 23.5 | Conclusions and Future Perspectives | 691 |
| | | |
| | Volume 2: Influencing Matter | |
| | | |
| | Part III: Lasers to Start and Influence Chemical Reactions | |
| | | |
| 24 | Overview | 699 |
| | <i>Maximilian Lackner</i> | |
| 24.1 | Introduction | 699 |
| 24.2 | Highlights of 'Lasers to Start and Influence Chemical Reactions' From This Book Volume | 699 |
| 24.2.1 | Laser-based Formation of Nanoparticles | 700 |
| 24.2.2 | Laser Ablation | 701 |
| 24.2.3 | Laser-induced Photocatalysis and Its Applications | 701 |
| 24.2.4 | Laser Enrichment of Isotopes | 702 |

XVI | Contents

- 24.2.5 Reaction Mechanisms in the Gas Phase Studied by Laser Pyrolysis 702
- 24.2.6 Femtochemistry: Lasers to Investigate Ultrafast Reactions 702
- 24.2.7 Laser-plasma Chemistry: Chemical Reactions Initiated by Laser-produced Plasmas 703
- 24.2.8 Laser Micromachining 703
- 24.2.9 Laser CVD 703
- 24.2.10 Laser-induced Ignition for Combustion Engines 703
- 24.2.11 Lasers in the Photopolymer Area 704
- 24.2.12 Laser Control of Chemical Reactions 704
- 24.2.13 Control of Chemical Dynamics with Lasers 704
- 24.2.14 Nanosecond Laser Flash Photolysis 705
- 24.2.15 Lasers in Semiconductor Photochemistry 705
- 24.2.16 Lasers in Photodynamic Therapy (PDT) 706
- 24.2.17 Photoreactions induced by Two-photon Absorption (TPA) 706
- 24.2.18 Laser–Microwave in Chemistry 706
- 24.2.19 Lasers in Material Processing 706
- 24.2.20 Lasers in Biology 707

25 Laser-based Formation of Nanoparticles 713

G.A. Shafeev

- 25.1 Introduction 713
- 25.2 Experimental Technique 714
- 25.3 Interaction of NPs with the Laser Beam 716
- 25.3.1 Laser Ablation of an Ag Target in Liquid Environment 717
- 25.3.2 Laser Ablation of an Au Target in Liquid Environment 717
- 25.4 Interaction of Nanoparticles with Laser Beam 720
- 25.4.1 Fragmentation of NPs under Laser Exposure in Liquids 721
- 25.4.2 Shape-selective Fragmentation 721
- 25.4.3 Formation of the Au–Ag Alloy under Laser Irradiation of Nanoparticles 724
- 25.5 Nanoparticles of Cu, Brass and Bronze 726
- 25.5.1 Internal Segregation of Brass NPs 727
- 25.6 Self-influence of a Femtosecond Laser Beam 729
- 25.7 Influence of the Nature of the Liquid 730
- 25.7.1 Ablation of a Ti Target 730
- 25.7.2 Ablation of Sn 732
- 25.7.3 W and Mo NPs 733
- 25.8 Modeling of Distribution Function 734
- 25.9 Nanostructures on Solid Targets 735
- 25.10 Outlook 737
- 25.11 Applications 738

- 26 Laser Ablation in Background Gas and Its Application to the Synthesis of Nanostructured Materials 743**
Tatsuo Okada
- 26.1 Introduction 743
 - 26.2 Dynamics of Conventional Laser-ablation Plume 744
 - 26.2.1 Kinetics of Atomic and Molecular Species 744
 - 26.2.2 Kinetic Energy of the Ionic Species 745
 - 26.2.3 Angular Distribution 747
 - 26.2.4 Influence of the Laser Pulse Duration 748
 - 26.2.5 Dynamics in a Background Gas 749
 - 26.2.6 Chemical Reaction With a Background Gas 750
 - 26.3 Plume Dynamics During Formation of Nanoparticles 751
 - 26.3.1 Visualization of Nanoparticle Formation Process 752
 - 26.3.2 Clustering in the Plume 753
 - 26.3.3 Influence of the Background Gas 755
 - 26.3.4 Nanoparticle Formation by Femtosecond Laser Ablation 756
 - 26.4 Nanoparticle-assisted Pulsed-laser Deposition of Nanostructured ZnO Crystals 757
 - 26.4.1 Nanoparticle-assisted Pulsed-laser Deposition 757
 - 26.4.2 Synthesis of ZnO Nanowires by NAPLD 759
 - 26.5 Summary 760
- 27 Laser-induced Photocatalysis and Its Applications 763**
Mohammed Ashraf Gondal
- 27.1 Introduction 763
 - 27.1.1 Mechanism of Laser-induced Photocatalytic Process for Different Applications 764
 - 27.1.2 Problems with Conventional Setups and Advantages of Laser-induced Photocatalysis 765
 - 27.2 Laser-induced Photocatalysis Setup 766
 - 27.3 Applications of Laser-induced Photocatalysis 768
 - 27.3.1 Laser-induced Photocatalytic Method for Hydrogen Production 768
 - 27.3.2 Laser-induced Photocatalytic Synthesis of High-value Hydrocarbons from Low-value Feed Stocks 774
 - 27.3.3 Removal of Phenol and other Organic Matter from Water Using Laser-induced Photocatalysis 781
 - 27.3.4 Rapid Disinfection of Water Using Laser-induced Photocatalysis 789
 - 27.4 Future Directions and Prospectus 792
- 28 Laser Enrichment of Isotopes 801**
Venkatachari Parthasarathy, Sisir Kumar Sarkar, and Parma Nand Bajaj
- 28.1 Introduction 801
 - 28.1.1 Advantages of Laser Isotope Separation 803
 - 28.2 Atomic Laser Isotope Separation 804
 - 28.2.1 Atomic Vapor Laser Isotope Separation 806

XVIII | Contents

- 28.2.2 Photochemical Atomic Vapor Laser Isotope Separation (PCAVLIS) 812
- 28.3 Molecular Laser Isotope Separation 813
- 28.3.1 Photodissociation 815
- 28.3.2 Electronic Predissociation 815
- 28.3.3 Two-step Photodissociation 815
- 28.3.4 Infrared Multiple-photon Dissociation 817
- 28.3.5 Bimolecular Reactions: Photochemical Molecular Laser Isotope Separation 820
- 28.3.6 Kinetic Model for Selective Dissociation 821
- 28.4 Laser enrichment of Carbon-13 824
- 28.4.1 LIS Schemes for Carbon-13 824
- 28.5 Macroscopic-scale LIS Studies 826
- 28.5.1 Photochemical Reactor 827
- 28.5.2 Low-temperature Distillation System 829
- 28.5.3 Preparative Gas Chromatograph 829
- 28.5.4 Analysis Methodology 829
- 28.5.5 Photolysis Runs in the PCR 830
- 28.6 Laser Separation of Sulfur-33 Isotope by a Novel Two-stage Approach 832
- 28.7 Scaling of the LIS Technology 833
- 28.7.1 Scaling of the AVLIS Technology 833
- 28.7.2 Scaling of the MLIS Technology 834
- 28.7.3 Development of Industrial LIS Technology 834
- 28.8 Conclusion 835
-
- 29 Reaction Mechanisms in the Gas Phase Studied by Laser Pyrolysis 839**
Douglas K. Russell
- 29.1 Introduction 839
- 29.2 Historical Background 840
- 29.3 Experimental Considerations 842
- 29.3.1 The Pyrolysis Cell 842
- 29.3.2 Window Materials 844
- 29.3.3 Infrared Lasers 845
- 29.3.4 Monitoring of Reaction 846
- 29.3.5 Photosensitizers 846
- 29.4 Investigative and Validation Studies 847
- 29.5 *Ab initio* Calculations of Reaction Pathways 848
- 29.6 Three Case Studies 849
- 29.6.1 Case Study I – Metal Alkyls 849
- 29.6.2 Case Study II – β -Diketones 851
- 29.6.3 Case Study III – Organic Ring Systems 853
- 29.7 Outlook 855
- 29.8 Summary 856

- 30 Femtochemistry: Lasers to Investigate Ultrafast Reactions 861**
Yann A. Gauduel
- 30.1 Introduction 861
 - 30.2 Femtosecond Probing of Elementary Processes 863
 - 30.2.1 Background on Ultrafast Pump–Probe Spectroscopy 865
 - 30.2.2 Short-time Vibrational Dynamics in Hydrogen-bonded Systems 867
 - 30.2.3 Femtosecond Electron Dynamics in Molecular Liquids 868
 - 30.3 Molecular Environment Effect on Reaction Dynamics 873
 - 30.3.1 Ultrafast Energy Transfer and Solvent Effects 873
 - 30.3.2 Presolvation Charge Transfer Reactions: The Prethermal Chemistry 877
 - 30.3.3 The Specific Case of the Electron–Proton Reaction 880
 - 30.4 Laser Control of Prereactive Steps and Bond Dynamics 882
 - 30.4.1 Time-resolved Wave Packet Motion on Potential Energy Surface 882
 - 30.4.2 Real-time Observation of an S–S Bond Making 884
 - 30.5 Table-top Laser and High-energy Femtochemistry 886
 - 30.6 Prospective Conclusion 890
- 31 Laser-plasma Chemistry: Chemical Reactions Initiated by Laser-produced Plasmas 899**
Libor Juha and Svatopluk Civiš
- 31.1 Introduction 899
 - 31.2 Gases and Their Mixtures 900
 - 31.2.1 Inorganic, Organic and Organometallic Chemistry of Laser Sparks: Chemical Reactions Initiated by LIDB of Various Molecular Gases 900
 - 31.2.2 Cosmogeochemistry with Laser Sparks: Laboratory Simulation of High-energy-density Events in Planetary Atmospheres and Related Environments 903
 - 31.2.3 Physical Chemistry and Chemical Physics of Laser Sparks: What are the Processes Responsible for Laser-plasma-induced Chemical Reactions? 906
 - 31.3 Systems Containing Condensed Phases 910
 - 31.3.1 Laser Plasmas Formed from Solids in Gas and/or Vacuum 911
 - 31.3.2 Laser-induced Breakdown in Liquids 914
 - 31.3.3 Liquid–Solid and Liquid–Gas Interfaces Irradiated by a Focused Laser Beam 915
 - 31.4 Outline 915
 - 31.5 Summary 916
- 32 Laser Micromachining 923**
Gerhard Liedl
- 32.1 Introduction 923
 - 32.1.1 Laser Processing 923
 - 32.2 Laser Systems 924
 - 32.2.1 Excimer Lasers 924

xx | Contents

- 32.2.2 Solid-state Lasers 929
- 32.2.3 Optical Systems 931
- 32.2.4 Material Processing 937
- 32.3 Summary 940

- 33 Laser-induced Chemical Vapor Deposition (LCVD) 943**
Nikolai A. Kirichenko
- 33.1 Basics 943
- 33.2 Mathematical Model 944
- 33.3 Additional Factors (Gas Heating, Mass Transport and Thermal Diffusion) 950
- 33.3.1 Thermal Expansion of Gas 950
- 33.3.2 Temperature Dependence of Diffusion Coefficient and Heat Conductivity 952
- 33.4 Growth of Fibers 954
- 33.5 Influence of Homogeneous and Heterogeneous Reactions 958
- 33.6 Direct Writing of Stripes 959
- 33.7 Advanced: Instabilities 962
- 33.8 Conclusion 966

- 34 Laser-induced Ignition for Combustion Engines 969**
Heinrich Kofler, Johannes Tauer, and Ernst Wintner
- 34.1 Introduction 969
- 34.2 Basics 971
- 34.2.1 Plasma Formation 971
- 34.2.2 Combustion Fundamentals 976
- 34.3 Components of Laser Ignition 982
- 34.3.1 Laser Ignition System 982
- 34.3.2 Combustion Window 992
- 34.4 Summary, Conclusions and Outlook 995

- 35 Lasers in the Photopolymer Area 1001**
Xavier Allonas, Céline Crouxé-Barghorn, Jean-Pierre Fouassier, Jacques Lalevée, Jean-Pierre Malval, and Fabrice Morlet-Savary
- 35.1 Introduction 1001
- 35.2 Basic Principles 1002
- 35.2.1 Light-induced Changes in Photopolymers 1002
- 35.2.2 Lasers in Photopolymers 1003
- 35.3 Converting Light into Reactive Species 1005
- 35.3.1 Light Absorption in the UV–visible Spectrum 1005
- 35.3.2 Free Radical Photoinitiating Systems 1006
- 35.3.3 Photoacid and Photobase Generators 1007
- 35.4 Photosensitive Polymers 1008
- 35.4.1 Photopolymerization and Negative Type Photoresists 1008
- 35.4.2 Positive Type Photoresists 1012

- 35.5 Applications in Industry 1013
 - 35.5.1 Microelectronics 1013
 - 35.5.2 Laser Direct Imaging and Computer-to-plate Technologies 1014
 - 35.5.3 Stereolithography 1016
 - 35.5.4 Holography 1018
- 35.6 Outlook 1021
 - 35.6.1 Two-photon Induced Polymerization 1021
 - 35.6.2 Near-field Photopolymerization 1021
- 35.7 Summary 1022

- 36 Laser Control of Chemical Reactions 1029**
Leticia González
 - 36.1 Introduction 1029
 - 36.2 One-parameter Laser Control Schemes 1032
 - 36.2.1 Coherent Control 1032
 - 36.2.2 Pump–Dump Control 1033
 - 36.2.3 Adiabatic Control 1037
 - 36.2.4 Few-cycle Pulses Control 1038
 - 36.3 Many-parameter Laser Control Schemes 1040
 - 36.3.1 Optimal Control Theory 1040
 - 36.3.2 Adaptive Feedback Control Theory 1042
 - 36.3.3 Looking behind Optimal Pulses 1045
 - 36.4 Strong Field Control 1046
 - 36.5 Conclusions and Perspectives 1047

- 37 Coherent Control of Chemical Dynamics with Lasers 1057**
Debabrata Goswami and Warren S. Warren
 - 37.1 Introduction 1057
 - 37.2 Ultrafast Pulse Shaping 1059
 - 37.2.1 Time Domain Pulse Shaping 1059
 - 37.2.2 Frequency Domain Pulse Shaping 1060
 - 37.3 Feedback-Based Quantum Control 1062
 - 37.4 Applications 1066
 - 37.4.1 Biomedical 1066

- 38 Nanosecond Laser Flash Photolysis 1073**
Norman P. Schepp and Frances L. Cozens
 - 38.1 Introduction 1073
 - 38.2 System Design and Data Analysis 1074
 - 38.3 Design of LFP Experiments 1078
 - 38.3.1 Identification of Transients 1078
 - 38.3.2 Precursor Design 1080
 - 38.3.3 Kinetic Probes 1082
 - 38.4 Applications of LFP Studies 1084
 - 38.4.1 Dynamics of β -heterolysis of β -substituted Radicals 1084

- 38.4.2 Using LFP to Probe Environments 1088
- 38.5 Outlook 1089
- 38.6 Summary 1090
- 39 Lasers in Semiconductor Photochemistry 1093**
Peter K. J. Robertson and Soo-Keun Lee
- 39.1 Introduction 1093
- 39.2 Theory 1094
- 39.3 Applications of Lasers for Modification of Photocatalyst Materials 1096
- 39.4 Applications of Laser Semiconductor Photochemical Reactions 1104
- 39.5 Outlook 1107
- 39.6 Summary 1108
- 40 Lasers in Photodynamic Therapy 1111**
Michael R. Hamblin and Pawel Mroz
- 40.1 Introduction to PDT 1111
- 40.2 Photosensitizers and Photochemical Mechanisms 1112
- 40.2.1 Photosensitizers 1112
- 40.2.2 Photophysics 1114
- 40.2.3 Photochemistry 1116
- 40.2.4 Tissue Optics 1118
- 40.3 Why Should Lasers be Used in PDT? 1120
- 40.4 History of Lasers in PDT 1122
- 40.4.1 Ruby Laser 1122
- 40.4.2 The He–Ne Laser 1122
- 40.4.3 Gold Vapor Laser 1123
- 40.4.4 Dye Lasers 1123
- 40.4.5 The YAG-optical Parametric Oscillator (OPO) Laser 1124
- 40.4.6 Diode Lasers 1124
- 40.5 Clinical Applications of Lasers in PDT 1125
- 40.5.1 Brain Cancer 1125
- 40.5.2 Lung Cancer 1126
- 40.5.3 Barrett’s Esophagus and Cancer 1127
- 40.5.4 Head and Neck Cancer 1128
- 40.5.5 Cardiovascular PDT 1129
- 40.5.6 Dermatology 1130
- 40.6 Two-photon PDT 1132
- 40.7 Future Outlook 1133
- 41 Photo Reactions Induced by Two-photon Absorption 1141**
Jens Träger, Hee-Cheol Kim, Martin Schraub, and Norbert Hampp
- 41.1 Introduction 1141
- 41.2 Theory 1143
- 41.3 Applications 1146
- 41.3.1 Two-photon Microscopy 1147

- 41.3.2 Microfabrication 1149
- 41.3.3 Data Storage Applications 1150
- 41.3.4 Optical Power Limiting 1151
- 41.3.5 Medical Applications 1152
- 41.4 Summary and Outlook 1157
- 42 Laser-microwave in Chemistry 1165**
Khalid Bougrin and El Houssaine El Rhaleb
- 42.1 Introduction 1165
- 42.2 The Microwave Process in Chemistry 1166
- 42.2.1 Fundamentals of Microwaves and their Interaction with Matter 1167
- 42.2.2 Basic Concept of Microwave Heating 1170
- 42.2.3 Microwave Processing of Materials 1171
- 42.3 Combination of Microwave and Laser Radiations 1178
- 42.3.1 Heating Due to Laser Irradiation 1178
- 42.3.2 Laser Material Processing 1179
- 42.3.3 Applications of the Hybrid Laser-microwave in Research and Industry 1180
- 42.4 Summary 1184
- Part IV: Applications**
- 43 Lasers in Material Processing 1195**
Milton S.F. Lima
- 43.1 Introduction 1195
- 43.2 Laser–Matter Interactions 1196
- 43.3 Laser Surface Treatments 1198
- 43.4 Laser Beam Welding 1202
- 43.5 Laser Machining 1205
- 43.6 Rapid Prototyping 1207
- 43.7 Concluding Remarks 1209
- 44 Lasers in Biology 1213**
Heidi Abrahamse
- 44.1 Introduction 1213
- 44.2 Theory 1213
- 44.2.1 Laser Action and the Effect on Biological Tissue 1213
- 44.2.2 Laser–Tissue Interactions 1214
- 44.2.3 Bioeffects of Laser Irradiation 1215
- 44.2.4 Functional Capacities of Lasers in Biological Material 1216
- 44.2.5 Scattering Effect in Biological Tissue 1217
- 44.2.6 Biological Compounds Capable of Absorbing Laser Irradiation 1217
- 44.2.7 Biochemistry Associated with Laser Light Absorption 1218
- 44.3 Applications of Laser Technology in Biology 1220

XXIV | Contents

- 44.3.1 Principle of Molecular Fluorescence 1220
- 44.3.2 Analytical and Quantitative Techniques Based on Fluorescence Microscopy 1221
- 44.4 Applications in Research and Industry 1236
 - 44.4.1 Microscopy 1236
 - 44.4.2 Flow Cytometry 1237
 - 44.4.3 Mass Spectrometry 1238
 - 44.4.4 Raman Spectroscopy 1238
 - 44.4.5 Optical Coherence Tomography 1239
 - 44.4.6 Laser Capture Microdissection 1239
 - 44.4.7 DNA Microarray Technology 1240
 - 44.4.8 Biological Laser Printing 1240
