Preface XI

List of Contributors XV

- 1 Basic Problems of Chemical Reaction Engineering and Potential of Membrane Reactors** 1
Sascha Thomas, Christof Hamel, and Andreas Seidel-Morgenstern
- 1.1 Challenges in Chemical Reaction Engineering 1
- 1.2 Concepts of Membrane Reactors 3
- 1.3 Available Membranes 6
- 1.4 Illustration of the Selectivity Problem 8
- 1.5 Reaction Rate, Conversion, Selectivity and Yield 9
- 1.5.1 Reaction Rates 9
- 1.5.2 Conversion 10
- 1.5.3 Mass Balance of a Plug Flow Tubular Reactor 10
- 1.5.4 Selectivity and Yield 12
- 1.6 Distributed Dosing in Packed-Bed and Membrane Reactors 13
- 1.6.1 Adjusting Local Concentrations to Enhance Selectivities 15
- 1.6.2 Optimization of Dosing Profiles 16
- 1.7 Kinetic Compatibility in Membrane Reactors 21
- 1.8 Current Status of Membrane Reactors of the Distributor Type 22
- Notation used in this Chapter 23
- Greek Symbols 23
- Superscripts and Subscripts 23
- Abbreviations 24
- References 24
- 2 Modeling of Membrane Reactors** 29
Michael Mangold, Jürgen Schmidt, Lutz Tobiska, and Evangelos Tsotsas
- 2.1 Introduction 29
- 2.2 Momentum, Mass and Heat Balances 29
- 2.3 Transport Kinetics 35
- 2.3.1 Fluid-Filled Regions 35

2.3.1.1	Molecular Transport of Momentum	35
2.3.1.2	Heat Conduction	35
2.3.1.3	Molecular Diffusion	36
2.3.2	Porous Domains	38
2.3.2.1	Molecular Diffusion	39
2.3.2.2	Knudsen Diffusion	39
2.3.2.3	Viscous Flow	40
2.3.2.4	Models for Description of Gas Phase Transport in Porous Media	40
2.4	Reduced Models	42
2.5	Solvability, Discretization Methods and Fast Solution	44
2.6	Implementation in FLUENT, MooNMD, COMSOL and ProMoT	49
2.6.1	Application of FLUENT	49
2.6.2	Application of MooNMD	50
2.6.3	Application of ProMoT	51
2.7	Conclusion	56
	Notation used in this Chapter	56
	Latin Notation	56
	Greek Notation	57
	Super- and Subscripts	58
	References	59
3	Catalysis and Reaction Kinetics of a Model Reaction	63
	<i>Frank Klose, Milind Joshi, Tanya Wolff, Henning Haida, Andreas Seidel-Morgenstern, Yuri Suchorski, and H. Weijß</i>	
3.1	Introduction	63
3.2	The Reaction Network of the Oxidative Dehydrogenation of Ethane	65
3.3	Catalysts and Structure–Activity Relations	66
3.3.1	Catalyst Preparation and Characterization	69
3.3.2	Mechanistic Aspects: Correlation Between Structure and Activity	71
3.4	Derivation of a Kinetic Model	73
3.4.1	Experimental	74
3.4.1.1	Catalyst	74
3.4.1.2	Set-Up	74
3.4.1.3	Procedures	75
3.4.2	Qualitative Trends	76
3.4.2.1	Overall Catalyst Performance	76
3.4.2.2	Evaluation of Intraparticle Mass Transfer Limitations	77
3.4.3	Quantitative Evaluation	78
3.4.3.1	Simplified Reactor Model and Data Analysis	78
3.4.3.2	Kinetic Models	78
3.4.3.3	Parameter Estimation	79
3.4.4	Suggested Simplified Model	79
	Special Notation not Mentioned in Chapter 2	82
	Latin Notation	82
	Greek Notation	82
	References	82

4	Transport Phenomena in Porous Membranes and Membrane Reactors	85
	<i>Katya Georgieva-Angelova, Velislava Edreva, Arshad Hussain, Piotr Skrzypacz, Lutz Tobiska, Andreas Seidel-Morgenstern, Evangelos Tsotsas, and Jürgen Schmidt</i>	
4.1	Introduction	85
4.2	Aspects of Discretizing Convection-Diffusion Equations	87
4.3	Velocity Fields in Membrane Reactors	89
4.4	Determination of Transport Coefficients and Validation of Models	97
4.4.1	Mass Transport Parameters of Multilayer Ceramic Membranes—Precursors Available	97
4.4.1.1	Task and Tools	97
4.4.1.2	Identification by Single Gas Permeation	100
4.4.1.3	Validation by Isobaric Diffusion and by Transient Diffusion	105
4.4.2	Mass Transport Parameters of Metallic Membranes—Precursors not Available	107
4.4.2.1	Diagnosis	107
4.4.2.2	Identification	110
4.4.2.3	Validation	111
4.4.3	Mass Transport in 2-D Models	114
4.5	Analysis of Convective and Diffusive Transport Phenomena in a CMR	115
4.6	Parametric Study of a CMR	120
4.6.1	Influence of Characteristic Geometrical Parameters	123
4.6.2	Influence of the Morphological Membrane Parameters in the Catalyst Layer	124
4.6.3	Influence of the Operating Conditions	127
4.7	Conclusion	130
	References	130
5	Packed-Bed Membrane Reactors	133
	<i>Christof Hamel, Ákos Tóta, Frank Klose, Evangelos Tsotsas, and Andreas Seidel-Morgenstern</i>	
5.1	Introduction	133
5.2	Principles and Modeling	134
5.2.1	Reactant Dosing in a Packed-Bed Membrane Reactor Cascade	134
5.2.2	Modeling Single-Stage and Multi-Stage Membrane Reactors	136
5.2.2.1	Simplified 1-D Model	136
5.2.2.2	More Detailed 1+1-D Model	137
5.2.2.3	Detailed 2-D Modeling of a Single-Stage PBMR	139
5.3	Model-Based Analysis of a Distributed Dosing via Membranes	140
5.3.1	Model Reactions	140
5.3.2	Simulation Study for ODH of Ethane Using the 1-D Model	141
5.4	Experimental	145
5.4.1	Catalyst and Used Membrane Materials	145
5.4.2	Single-Stage Packed-Bed Membrane Reactor in a Pilot-Scale	145

5.4.3	Reference Concept – Conventional Fixed-Bed Reactor	147
5.4.4	Multi-Stage Membrane Reactor Cascade	147
5.4.5	Analytics	147
5.4.6	Experimental Conditions	148
5.5	Results for the Oxidative Dehydrogenation of Ethane to Ethylene	148
5.5.1	Comparison Between PBR and PBMR Using Ceramic Membranes in a Single-Stage Operation Mode	148
5.5.2	2-D Simulation Results – Comparison Between PBR and PBMR	152
5.5.3	Application of Sintered Metal Membranes for the ODH of Ethane	153
5.5.4	Investigation of a Membrane Reactor Cascade – Impact of Dosing Profiles	155
5.5.5	Quantitative Comparison of the Investigated Reactor Configurations	157
5.6	Results for the Oxidative Dehydrogenation of Propane	158
5.6.1	Comparison Between PBR and a Single-Stage PBMR Using Ceramic Membranes	158
5.6.2	Investigation of a Three-Stage Membrane Reactor Cascade	159
5.7	Summary and Conclusions	160
	Special Notation not Mentioned in Chapter 2	161
	Latin Notation	161
	Greek Notation	162
	References	162
6	Fluidized-Bed Membrane Reactors	167
	<i>Desislava Tóta, Ákos Tóta, Stefan Heinrich, and Lothar Mörl</i>	
6.1	Introduction	167
6.2	Modeling of the Distributed Reactant Dosage in Fluidized Beds	170
6.2.1	Theory	170
6.2.2	Parametric Sensitivity of the Model	173
6.2.2.1	Bubble Size	173
6.2.2.2	Secondary Gas Distribution	175
6.2.3	Comparison Between Co-Feed and Distributed Oxygen Dosage	176
6.3	Experimental	178
6.3.1	Experimental Set-Up	178
6.3.2	Experimental Procedure	180
6.3.3	Results and Discussions	181
6.3.4	Influence of the Oxygen Concentration	181
6.3.5	Influence of the Temperature	183
6.3.6	Influence of the Superficial Gas Velocity	184
6.3.7	Influence of the Secondary to Primary Gas Flow Ratio	185
6.3.8	Influence of Distributed Reactant Dosing with Oxygen in the Primary Gas Flow	187
6.4	Conclusions	188
	Special Notation not Mentioned in Chapter 2	189

	Latin Notation	189
	Greek Notation	190
	Subscripts and Superscripts	190
	References	190
7	Solid Electrolyte Membrane Reactors	193
	<i>Liisa Rihko-Struckmann, Barbara Munder, Ljubomir Chalakov, and Kai Sundmacher</i>	
7.1	Introduction	193
7.2	Operational and Material Aspects in Solid Electrolyte Membrane Reactors	194
7.2.1	Classification of Membranes	194
7.2.2	Ion Conductivity of Selected Materials	195
7.2.3	Membrane–Electrode–Interface Design in Solid Electrolyte Membrane Reactor	196
7.2.4	Operating Modi of Solid Electrolyte Membrane Reactors	198
7.2.5	Cell Voltage Analysis	199
7.2.6	Non-Faradaic Effects	200
7.3	Modeling of Solid Electrolyte Membrane Reactors	201
7.3.1	Reactor Model for Systems Containing Solid Electrolyte Membranes	202
7.3.2	Kinetic Equations for Charge Transfer Reactions	206
7.3.3	Parameters for Charge Transfer and Solid Electrolyte Conductivity	206
7.3.4	Analysis of Maleic Anhydride Synthesis in Solid Electrolyte Membrane Reactor	209
7.3.5	Analysis of Oxidative Dehydrogenation of Ethane in a Solid Electrolyte Packed-Bed Membrane Reactor	212
7.4	Membrane Reactors Applying Ion-Conducting Materials	216
7.4.1	High-Temperature Oxygen Ion Conductors	216
7.4.1.1	Solid Oxide Fuel Cell for Electrical Energy Production	216
7.4.1.2	Oxidative Coupling of Methane to C ₂ and Syngas from Methane	217
7.4.1.3	Dry Reforming of Methane	218
7.4.2	High-Temperature Proton Conductors	219
7.4.2.1	Hydrogen Sensors and Pumps	220
7.4.2.2	Fuel Cells	221
7.4.2.3	Electrocatalytic Membrane Reactors	221
7.4.3	Low-Temperature Proton Conductors	222
7.4.3.1	PEM Fuel Cells	223
7.4.3.2	Proton Exchange Membrane Reactors	224
7.5	Conclusions	228
	Special Notation not Mentioned in Chapter 2	228
	Latin Notation	228
	Greek Notation	229
	Characteristic Dimensionless Numbers	229

Superscripts 230

8 Nonlinear Dynamics of Membrane Reactors 235

Michael Mangold, Fan Zhang, Malte Kaspereit, and Achim Kienle

8.1 Introduction 235

8.2 Limit of Chemical Equilibrium 235

8.2.1 Reference Model 235

8.2.2 Isothermal Operation 237

8.2.2.1 Nonreactive Membrane Separation 237

8.2.2.2 Membrane Reactor 240

8.2.3 Nonisothermal Operation 245

8.2.3.1 Formation of Traveling Waves 245

8.2.3.2 Formation of Discontinuous Patterns 246

8.3 Pattern Formation 248

8.3.1 Analysis of a Simple Membrane Reactor Model 249

8.3.1.1 Analysis of Steady-State Reactor Behavior for Vanishing Heat Dispersion 252

8.3.1.2 Influence of Heat Dispersion 254

8.3.2 Detailed Membrane Reactor Model 255

8.3.2.1 Main Model Assumptions 256

8.3.2.2 Model Equations of the Membrane 257

8.3.2.3 Simulation Results 259

8.4 Conclusions 259

References 261

9 Comparison of Different Membrane Reactors 263

Frank Klose, Christof Hamel, and Andreas Seidel-Morgenstern

9.1 General Aspects Regarding Membrane Reactors of the Distributor Type 263

9.2 Oxidative Dehydrogenation of Ethane in Different Types of Membrane Reactors 264

9.2.1 Packed-Bed Membrane Reactor 265

9.2.2 Fluidized-Bed Membrane Reactor 265

9.2.3 Electrochemical Packed-Bed Membrane Reactor 266

9.3 General Conclusions 266
