	Preface	13
	Acknowledgments	15
1	Introduction and Overview	1
1.1	Introduction	1
1.2	Historical Development	2
1.2.1	Early Ion-Exchange Separations	2
1.2.2	Cation Separations	3
1.2.3	Separation of Anions	6
1.2.4	On-line Detection	8
1.2.5	The Birth of Modern Ion Chromatography	8
1.2.6	Non-Suppressed-Ion Chromatography	10
1.3	Principles of Ion Chromatographic Separation and Detection	13
1.3.1	Requirements for Separation	13
1.3.2	Experimental Setup	13
1.3.3	Performing a Separation	14
1.3.4	Migration of Sample Ions	15
1.3.5	Detection	17
1.3.6	Basis for Separation	17
2	Instrumentation	21
2.1	Components of an Ion Chromatograph (IC) Instrument	21
2.2	General Considerations	23
2.3	Eluent	24
2.4	Pump	26
2.4.1	Gradient Formation	29
2.5	Sample Injector	30
2.6	Columns	31
2.6.1	Column Hardware	31
2.6.2	Column Protection	32
2.6.3	Column Oven	33
2.6.4	Two-dimensional IC	33

2.7	Suppressor	33
2.8	Detector	34
2.9	Data Acquisition and Calculation of Results	35
3	Resins and Columns	37
3.1	Introduction	37
3.2	Polymeric Resins	38
3.2.1	Substrate and Cross Linking	38
3.2.2	Microporous Resins	39
3.2.3	Macroporous Resins	40
3.2.4	Chemical Functionalization	41
3.2.5	Resin Capacity	42
3.3	Resins and Columns for Ion Chromatography	43
3.3.1	Monolith Columns	43
3.4	Anion Exchangers	45
3.4.1	Porous Anion Exchangers	45
3.4.2	Effect of Functional Group on Selectivity	47
3.4.3	Effect of Spacer Arm Length	52
3.4.4	Latex Agglomerated Ion Exchangers	54
3.4.4.1	Effect of Latex Functional Group on Selectivity	56
3.5	Cation Exchangers	57
3.5.1	Sulfonated Resins	57
3.5.2	Weak-acid Cation Exchangers	61
3.5.3	Other Types	63
3.6	Other Resins	63
3.6.1	Chelating Ion-exchange Resins	63
3.6.2	Metal Oxides	64
3.6.3	Multi-purpose Resins	64
3.6.4	Ion-exchange Disks	65
4	Detectors	69
4.1	Introduction	69
4.2	Conductivity Detectors	70
4.2.1	Conductivity Definitions and Equations	73
4.2.2	Principles of Cell Operation	74
4.2.3	Conductance Measurement	75
4.2.4	Conductivity Hardware and Detector Operation	75
4.2.5	Contactless Conductivity Detection	76
4.3	Ultraviolet-Visible (UV-Vis) Detectors	77
4.3.1	UV-Vis measurement	77
4.3.2	Direct Spectrophotometric Measurement	78
4.3.3	Post-column Derivatization	81
4.3.4	UV-Vis Hardware and Detector Operation	82
4.4	Fluorescence Detector	83
4.5	Electrochemical Detectors	85

4.5.1	Potentiometric Detection	86
4.5.2	Conductometric Detectors	86
4.5.3	Amperometric/Coulometric Detection	87
4.5.4	Pulsed Electrochemical Detection (PED)	89
4.5.4.1	Pulsed Amperometric Detection (PAD)	91
4.5.4.2	Integrated Pulsed Amperometric Detection (IPAD)	93
4.5.4.3	IC-PED	94
4.5.5	Post-column Derivatization	95
4.5.6	Electrochemical Hardware and Detector Operation	95
4.6	Refractive Index Detector	97
4.7	Evaporative Light Scattering Detector (ELSD)	97
4.7.1	Nebulizer	98
4.7.2	Evaporation Chamber	99
4.7.3	Detection Cell	99
4.8	Other Detectors	100
5	Principles of Ion Chromatographic Separations	105
5.1	General Considerations	105
5.2	Chromatographic Terms	105
5.2.1	Retention Factor	106
5.3	Selectivity	109
5.3.1	Selectivity Coefficients	110
5.3.2	Other Ion-exchange Interactions	112
5.3.3	Selectivity of Sulfonated Cation-exchange Resin for Metal Cations	113
5.3.4	Factors Affecting Selectivity	120
5.3.4.1	Polymeric Matrix Effect	121
5.3.4.2	Resin Functional Group	122
5.3.4.3	Solvation Effects	123
5.4	Chromatographic Efficiency	124
6	Anion Chromatography	131
6.1	Scope and Conditions for Separation	131
6.1.1	Columns	132
6.1.2	Separation Conditions	135
6.2	Suppressed Anion Chromatography	138
6.2.1	Electrolytic Suppressors	140
6.2.2	Solid-Phase Reagents, 1990 [7]	141
6.2.3	Typical Separations	142
6.2.3.1	Isocratic and Gradient Elution	144
6.2.3.2	Influence of Organic Solvents	146
6.3	Nonsuppressed Ion Chromatography	147
6.3.1	Principles	147
6.3.2	Explanation of Chromatographic Peaks	150
6.3.3	Eluent	150
6.3.3.1	General Considerations	150

6.3.3.2	Salts of Carboxylic Acids	151
6.3.3.3	Basic Eluents	152
6.3.3.4	Carboxylic Acid Eluents	153
6.3.4	System Peaks	154
6.3.5	Scope of Anion Separations	155
6.3.6	Sensitivity	155
6.3.6.1	Conductance of a Sample Peak	158
6.4	Coated Columns	160
6.5	Optical Absorbance Detection	163
6.5.1	Introduction	163
6.5.2	Direct UV Absorption	163
6.5.3	Indirect Absorbance	164
6.6	Detection	166
6.7	Pulsed Amperometric Detector (PAD)	168
6.8	Evaporative Light Scattering Detector (ELSD)	170
6.9	Inductively Coupled Plasma Methods (ICP)	172
6.9.1	Atomic Emission Spectroscopy (AES)	172
6.9.2	Inductively Coupled Plasma Mass Spectrometry (ICP-MS)	173
7	Cation Chromatography	175
7.1	Introduction	175
7.2	Columns	176
7.2.1	Historical Development	178
7.2.2	Phosphonate Columns	179
7.2.3	Macrocycle Columns	181
7.2.4	Surfactant Columns	182
7.3	Separations	184
7.3.1	Suppressed-Conductivity Detection	184
7.3.2	Non-Suppressed-Conductivity Detection	187
7.3.3	Spectrophotometric Detection	188
7.4	Effect of Organic Solvents	191
7.4.1	Separation of Alkali Metal Ions	193
7.5	Separation of Metal Ions with a Complexing Eluent	195
7.5.1	Principles	195
7.5.2	Separations	196
7.5.3	Use of Sample Masking Reagents	197
7.5.4	Weak-Acid Ion Exchangers	198
7.6	Chelating Ion-Exchange Resins and Chelation Ion Chromatography	201
7.6.1	Fundamentals	201
7.6.2	Examples of Metal-Ion Separation	204
8	Ion-Exclusion Chromatography	207
8.1	Principles	207
8.1.1	Equipment	209

8.1.2	Eluents	209
8.1.3	Detectors	210
8.2	Separation of Organic Acids	211
8.2.1	Effect of Alcohol Modifiers	214
8.2.2	Separation of Carboxylic Acids on Unfunctionalized Columns	216
8.3	Simultaneous Determination of Anions and Cations	217
8.4	Conclusions	220
8.5	Determination of Carbon Dioxide and Bicarbonate	222
8.5.1	Enhancement Column Reactions	222
8.6	Separation of Bases	223
8.7	Determination of Water	226
8.7.1	Determination of Very Low Concentrations of Water by HPLC	229
8.8	Separation of Saccharides and Alcohols	230
8.8.1	Introduction	230
8.8.2	Separation Mechanism and Control of Selectivity	230
8.8.3	Detection	235
8.8.4	Contamination	235
9	Ion Pair Chromatography	239
9.1	Principles	239
9.2	Typical Separations	242
9.3	Mechanism	246
10	Zwitterion Stationary Phases	251
10.1	Introduction	251
10.2	Simultaneous Separation of Anions and Cations	253
10.3	Separation of Anions	255
10.4	Separation of Cations	256
10.5	Mechanism	259
11	Capillary Electrophoresis	263
11.1	Introduction	263
11.1.1	Steps in Analysis	264
11.1.1.1	Capillary Pretreatment	264
11.1.1.2	Sample Introduction	264
11.1.1.3	Sample Run	265
11.1.1.4	Detection	265
11.2	Principles	265
11.2.1	Terms and Relationships	265
11.2.2	Zone Broadening	267
11.2.3	Sample Injection	267
11.3	Electroosmotic Flow (EOF)	268
11.3.1	Effect of EOF on Separations	270
11.3.2	Control of EOF	271
11.4	Separation of Ions	274

11.4.1	Separation of Anions	274
11.4.1.1	Separation of Isotopes	276
11.4.2	Separation of Cations	278
11.4.3	Separations at Low pH	279
11.4.4	Capillary Electrophoresis at High Salt Concentration	280
11.5	Capillary Electrophoretic Ion Chromatography	283
11.5.1	Micellar Electrokinetic Chromatography (MEKC)	284
11.5.2	Partial Complexation	285
11.5.3	Effect of Ionic Polymers	287
11.5.4	Effect of Alkylammonium Salts	291
11.5.4.1	Separation Mechanism	294
11.6	Summary	294
12	DNA and RNA Chromatography	299
12.1	Introduction	299
12.1.1	Importance of DNA and RNA Chromatography	299
12.1.2	Organization of this Chapter	300
12.2	DNA and RNA Chemical Structure and Properties	301
12.3	DNA and RNA Chromatography	303
12.3.1	Development of DNA and RNA Chromatography	303
12.3.2	Column Properties	305
12.3.3	Ion-pairing Reagent and Eluent	306
12.4	Temperature Modes of DNA and RNA Chromatography	307
12.4.1	Nondenaturing Mode	307
12.4.2	Fully Denaturing Mode	308
12.4.3	Partially Denaturing Mode	309
12.5	Instrumentation	310
12.5.1	Effect of Metal Contamination	310
12.5.2	The Column Oven	313
12.5.3	UV and Fluorescence Detection	313
12.5.4	Fragment Collection	314
12.6	Applications of DNA Chromatography	314
12.6.1	DHPLC	314
12.6.2	Nucleic Acid Enzymology	315
12.6.2.1	Telomerase Assays	315
12.6.2.2	Polynucleotide Kinase Assays	316
12.6.2.3	Uracil DNA Glycosylase Assays	317
12.7	Applications of RNA Chromatography	317
12.7.1	Separation of Messenger RNA from Ribosomal RNA	318
12.7.2	Analysis of Transfer RNA	319
13	Sample Pretreatment	323
13.1	Dilute and Shoot or Pre-treat the Sample?	323
13.2	Particulate and Column-contaminating Matter	324
13.3	Preconcentration	325

- 13.3.1 Collection of Ions from Air 325
- 13.3.2 Preconcentration of Ions in Water 326
- 13.4 Sample Pretreatment 328
- 13.4.1 Anions in Acids 328
- 13.4.2 Neutralization of Strongly Acidic or Basic Samples 328
- 13.4.3 Dialysis Sample Preparation 329
- 13.4.3.1 Passive Dialysis 330
- 13.4.3.2 Donnan (Active) Dialysis 330
- 13.4.4 Isolation of Organic Ions 333

14 Method Development and Validation 335

- 14.1 Choosing a Method 335
- 14.1.1 Define the Problem Carefully 335
- 14.1.2 Experimental Considerations 336
- 14.1.3 Example of Method Development 338
- 14.2 Some Applications of Ion Chromatography 340
- 14.3 Statistical Evaluation of Data 341
- 14.3.1 Common Statistical Terms 341
- 14.3.2 Distribution of Means 344
- 14.3.3 Confidence Intervals 345
- 14.4 Validation of Analytical Procedures 347
- 14.4.1 Analytical Control 349

15 Chemical Speciation 353

- 15.1 Introduction 353
- 15.2 Detection 355
- 15.3 Chromatography 356
- 15.4 Valveless Injection IC 357
- 15.5 Speciation of some Elements 359
- 15.5.1 Chromium 359
- 15.5.2 Iron 360
- 15.5.3 Arsenic 361
- 15.5.4 Tellurium 362
- 15.5.5 Selenium 363
- 15.5.6 Vanadium 364
- 15.5.7 Tin 364
- 15.5.8 Mercury 365
- 15.5.9 Other Metals 365
