

Index

a

accessory genes 19
 acrylamide gel layers 72
 aldehyde-coated slides 9
 aldehyde end-groups 96
 aliphatic aldehydes 88
 alkene silane-functionalized silicon 77
 – substrates 78
 alkyl chains 90
 amine silanated slides 40
 amino-modified probe molecules, *see* ODNs
 amino silane surface chemistry 9
 amplification methods 11
 – GenomiPhi 11
 – MessageAmp 11
 amplification sequences 20
 anthrax 59, 147, 158
 antibiotic resistance genes 149
 antigen-antibody interactions 1
 antitoxin antibodies 94
 ARB software package 49
 array platforms 67
 array technologies 80, 85
 atomic force microscopy (AFM) 74, 90
 – tip 75, 76
 avidin molecules 77
 – CdSe/ZnS QDs 94

b

Bacillus anthracis 21, 147
 bacterial genomes 60, 144
 bacterial identification system 62
 bacterial pathogens 2
 bacterial species 156, 157
 bead-based arrays 21
 biofunctional linker 96
 bioinformatics tools 60
 bioligands 85, 93

– antibodies 94
 – oligodeoxynucleotides 85
 biological interactions 93
 biological material 144
 biological weapons 125
 biomolecules 93
 – DNA 93
 – ODN 93
 bioterror weapons 59
 biotinylated ODNs 98

c

carboxylic acids 88
 CCD camera 15
 cDNA fragments 18
 cDNA microarray platforms 93
 CEL associates 40
 cell-cultured virus 118
 CGH approaches 19
 chip-based devices 90
 conductive atomic force microscopy 67,
 77, 79, 89
 Crimean-Congo hemorrhagic fever virus
 120
 custom-designed resequencing array 21

d

dendritic linkers 98
 dengue viruses 120
 dideoxynucleotides (ddNTPs) 53
 dinucleotide arrays 60
 – permutations 61
 dip-pen nanolithography 67, 80
 – schematic description 75
 DNA-based targets 10
 DNA-binding dyes 135
 DNA aptamers 94
 DNA arrays 70

DNA extraction kit/protocol 38, 52
 DNA fragments 9, 115
 DNA hybridization 74, 142
 DNA microarray 1, 5, 18, 107, 125, 129, 155
 – analysis 128, 130
 – microbial screening 10
 – platform 142
 – technology 107, 130
 DNA probes 15
 DNA sequence 20, 126, 135, 141
 – alignments 136
 double-stranded DNA complexes 118
 double-stranded ODN 97
 downward pin movement 72
 droplet properties 72
 – density 72
 – surface tension 72
 – viscosity 72

e

elastomeric stamp 69
 electrical discharge machining (EDM) 72
 electrochemical reaction 14
 electrophilic glass coatings 88
 – epoxysilane 88
 – phenylisothiocyanate 88
 electrophilic groups 88
 electrostatic interactions 9
 electrostatic physiosorption/supramolecular interactions 90
 environmental samples 113
 – bioterrorism-associated 113
 enzymatic amplification 22
 enzyme-assisted hybridization strategies 22
 epidemiological markers 2
 epoxy-coated substrates 9
Escherichia coli 69
 Eurasian species 117

f

F. tularensis strains 127
 – cladogram of 127
 false-positive signals 44, 47
 flavivirus microarray assay 117, 119, 120
 fluorescence-based methods 14
 fluorescence signals 139
 fluorochrome-labeled tyramides 22
 – horseradish peroxidase-mediated deposition 22
 fluorophore molecules 15

g

GA aqueous solution 96
 GA treatment 96
 gene expression 10, 153
 – analysis 3
 – profiling 107
 generic arrays 5, 19
 genetic markers 143
 genetic patterns 126
 genomic DNA 125
 – sequences 120
 Gibbs free energies 5
 Glass slide surfaces 89
 gold-catalyzed chemical vapor deposition method 79
 gold-coated glass slides 90
 gold-coated substrates 75
 gold nanoparticles 90

h

Hantavirus microarray 117, 118
 hemorrhagic fever viruses 121
 – first-generation microarray 122
 – symptoms 116, 120
 hetero-bifunctional cross-linker 96
 high-density microarrays 90
 – oligonucleotide-based whole-genome 107
 high-performance liquid chromatography purification 160
 high-throughput techniques 21, 67
 – approaches 21
 – DNA/protein microarrays 67
 – schematic description 69
 house-keeping genes 17
 – atpD 17
 – groEL 17
 – gyrB 17
 – recA 17
 – rpoB 17
 hybridization assay format 107
 hybridization buffer 42, 54
 – parameters 63
 hybridization technology 160
 hydrophobic barriers 13
 hydroxyl groups 89
 hydroxyl ions 76

i

immobilization technique 94
 immobilize tagged bioligands 98
in silico experiments 61
in situ oligonucleotide synthesis 13
 ink-jet nozzles 13

- ink-jet printing 71, 73
 - delivery mechanism 73
 - process 13
- inter-operator experimental variation 164
- intracellular symbionts 128

- j**
- Japanese strains 127

- l**
- large-scale/high-throughput
 - methodologies 67
- LCD array experiment 107, 108
- LCD-Chip method 112
- ligation detection reaction (LDR) 141
 - probes 142
- lithographic system 74
 - techniques 70
- locked nucleic acid (LNA) 136, 137
- long-chain alkanethiols 97
- long vs. short oligonucleotide probes 6
- low-cost and low-density (LCD) 107
- low-density surface coverage 94
- low-quality coatings 9

- m**
- Marburg virus 121
- marker gene 49
- MCH molecules 97
- metallic/organometallic precursors 93
 - cadmium 93
 - mercury 93
 - zinc 93
- micro-spotting 72
 - pins 74
 - robotic system 72
 - technology 71, 72
- micro-spotting/ink-jet printing 71
- microarray assay 22, 121
- microarray-based test 113, 116, 118
 - analysis 126
 - applications 15
 - design 20
 - detection sensitivity 14
