Preface XIII

List of Contributors XV

1	Introduction to Microarray-Based Detection Methods	1
	<i>Jacques Schrenzel, Tanja Kostic, Levente Bodrossy, and Patrice Francois</i>	
1.1	Introduction to Microarray Technology	1
1.2	Technical Aspects of Microarray Technology	2
1.2.1	Probes	2
1.2.1.1	Genome Fragments	3
1.2.1.2	PCR Products	3
1.2.1.3	Oligonucleotide Probes	3
1.2.2	Substrates for Printing	6
1.2.2.1	Slides with Poly-L-lysine Coating	9
1.2.2.2	Slides with Amino Silane Coating	9
1.2.2.3	Slides with Aldehyde Coating	9
1.2.2.4	Slides with Epoxy Coating	9
1.2.2.5	Proprietary Surface Chemistries	9
1.2.2.6	Probe Spacers	9
1.2.3	Targets for Microarray Analysis	10
1.2.3.1	Target Amplifications and Sensitivity Issues	10
1.2.3.2	Labeling of the Targets	11
1.2.3.3	Hybridization and Wash Conditions	11
1.2.4	Classical Commercially Available Microarray Formats	12
1.2.4.1	Spotting Approaches	12
1.2.4.2	<i>In Situ</i> Synthesis	12
1.2.5	Alternative Methods for Improving Microarray-Based Detection Sensitivity	14
1.2.5.1	Resonance-Light Scattering (RLS)	14
1.2.5.2	Planar-Waveguide Technology (PWT)	14

1.2.5.3	Liquid Arrays	15
1.2.5.4	Three-Dimensional Microarray Formats	15
1.2.6	Marker Genes Used on MDMs	16
1.3	Analysis and Quality Control Aspects	17
1.4	Applications of Microarray Technology in Microbial Diagnostics	18
1.4.1	Gene Expression Studies	18
1.4.2	Comparative Genomic Hybridization (CGH)	18
1.4.3	Generic or Universal Microarrays	19
1.4.4	Microarrays for Sequence Analysis	20
1.4.5	Microbial Diagnostic Microarrays (MDMs)	21
1.5	Further Developments and New Perspectives Regarding Array Sensitivity and Specificity	22
1.6	Conclusions	22
	References	22

Part I **Methods** 35

2 Long Oligonucleotide Microarray-Based Microbial Detection 37

Tanja Kostic and Levente Bodrossy

2.1	Introduction	37
2.2	Method	38
2.2.1	DNA Extraction	38
2.2.2	Φ 29 Amplification	38
2.2.3	Klenow Amplification/Labeling	39
2.2.4	Probe and Slide Preparation	40
2.2.5	Slide Processing Protocol (for Amino Surfaces)	41
2.2.6	Hybridization and Slide Washing	42
2.2.7	Comments	44
2.3	Our Test System and Results	44
2.4	Conclusions	44
	References	46

3 Sequence-Specific End-Labeling of Oligonucleotides 47

Tanja Kostic and Levente Bodrossy

3.1	Introduction	47
3.2	Probe Design	50
3.3	Slide Preparation (Spotting)	51
3.4	Slide Processing Protocol (for Aldehyde Surfaces)	52
3.5	DNA Extraction and PCR Amplification of the Targeted Gene	52
3.6	Shrimp Alkaline Phosphatase Treatment	53
3.7	Labeling	53
3.8	Hybridization and Slide Washing	54
3.9	Data Analysis	55
3.10	Costs	55
3.11	Microarray for Detection of Pathogenic Bacteria	55
	References	56

4	Non-Cognate Approaches for Pathogen Detection on Microarrays	59
	<i>Antoine Huyghe, Patrice Francois, Yvan Charbonnier, David Hernandez, Jonathan Hibbs, and Jacques Schrenzel</i>	
4.1	Introduction	59
4.2	Non-Cognate Hybridization System	60
4.2.1	Concept	60
4.2.2	Definition of the Optimal Probe Length	60
4.2.3	Virtual Assessment of Array Performances (<i>in Silico</i> Experiments)	61
4.2.4	Array Manufacturing and Hybridization (Wet-Lab Experiments)	63
4.2.5	Analysis	64
4.3	Perspectives	64
	References	64
5	Patterning Techniques for Array Platforms	67
	<i>Erhan Pişkin, Bora Garipcan, Gökhan Demirel, and Oğuzhan Çağlayan</i>	
5.1	Introduction	67
5.2	Soft Lithography	68
5.3	Photolithography	70
5.4	Robotic Printing	71
5.4.1	Micro-Spotting	71
5.4.2	Ink-Jet Printing	72
5.5	Lithography with AFM	74
5.5.1	Dip-Pen Lithography with AFM	75
5.5.2	cAFM Lithography	76
5.5.3	Nanoshaving and Nanografting	77
5.6	Conclusions	80
	References	81
6	Probe Immobilization Techniques in Array Technologies	85
	<i>Erhan Pişkin, Bora Garipcan, and Memed Duman</i>	
6.1	Introduction	85
6.2	Support Material	86
6.2.1	Glass	86
6.2.2	Silicon	90
6.2.3	Gold	90
6.2.4	Polymers	91
6.2.5	QDs	91
6.3	Immobilization	94
	References	99

Part II Identification 105

- 7 Low-Cost and Low-Density Microarrays – A Novel Technique for Identification and Typing of Microorganisms 107**
Dimitrios Frangoulidis, Volker Heiser, Olfert Landt, and Hermann Meyer
- 7.1 Introduction 107
- 7.2 Chip Design/Array Description 107
- 7.3 Protocol for a LCD Array Experiment 108
- 7.3.1 Amplification 108
- 7.3.2 Short Protocol for Hybridization and Labeling 109
- 7.4 Results and Discussion 111
- 7.5 Conclusions 111
- 8 DNA Microarray Technique for Detection and Identification of Viruses Causing Encephalitis and Hemorrhagic Fever 113**
Henrik Nordström, Kerstin I. Falk, Peter Nilsson, and Åke Lundkvist
- 8.1 Introduction 113
- 8.2 Principle of Applying Microarray Technology for Virus Detection and Identification 113
- 8.3 Viruses and the Importance of Rapid Diagnostics 115
- 8.4 Advantages and Drawbacks of Using the Microarray Technique 115
- 8.5 Key Factors for Development of a Microarray-Based Test 116
- 8.6 Hantavirus Microarray 117
- 8.7 Flavivirus Microarray 117
- 8.8 Hemorrhagic Fever Viruses 121
- 8.9 Conclusions 123
- References 123
- 9 Microarrays for Genotyping of Pathogens 125**
Jasper Kieboom, Ingrid Voskamp, and Martien P. Broekhuijsen
- 9.1 Aim and Approach 125
- 9.2 *Francisella* Genotyping 125
- 9.3 *Brucella* Genotyping 128
- 9.4 Conclusions 130
- References 131

Part III Typing 133

- 10 Single Nucleotide Polymorphisms as Targets for DNA-Based Identification and Typing of Biosafety Level 3 Bacteria 135**
Pierre Wattiau, Pieter Vos, and David Fretin
- 10.1 Introduction 135
- 10.1.1 Real-Time Polymerase Chain Reaction: More Than a Simple Polymerase Chain Reaction 135

10.2	Results of Different SNP Typing Methods	136
10.2.1	Locked Nucleic Acid-containing TaqMan probes as SNP Typing Tools	136
10.2.1.1	Use of TaqMan LNA Probes for the Typing of <i>Brucella suis</i> Subspecies	136
10.2.2	Typing SNPs with Molecular Beacons	139
10.2.2.1	Use of Molecular Beacons for Typing <i>Burkholderia pseudomallei</i> Subspecies	139
10.2.3	Typing Large Number of SNPs by Ligation Detection Reaction	139
10.2.3.1	Use of LDR Probes and Low-Density Microarrays for the Multiplex Diagnostic of BSL3 Bacteria	142
10.3	Conclusions	144
	References	145
11	Use of a Microchip to Detect Antibiotic Resistance Genes in <i>Bacillus anthracis</i>	147
	<i>Vincent Perreten and Joachim Frey</i>	
11.1	Introduction	147
11.2	Conjugal Transfer of Antibiotic Resistance Genes Between <i>Enterococcus</i> Species and Avirulent Strains of <i>B. anthracis</i>	148
11.3	Determination of the MICs of Different Antibiotics for the <i>B. anthracis</i> Transconjugants	148
11.4	Detection of Antibiotic Resistance Genes in <i>B. anthracis</i> by Microchip-Based Hybridization System (ArrayTube)	149
11.5	Conclusions	150
	References	151
Part IV	Quality Control	153
12	Progress Towards Development of Microarrays for Routine Diagnostic Use	155
	<i>Karen Kempself, Sonal Shah, Susanna Sherwin, Richard Vipond, and Nigel Silman</i>	
12.1	Introduction	155
12.2	Materials and Methods	157
12.2.1	Bacterial Strains, Culture and Nucleic Acid Purification	157
12.2.2	Design and Printing of Oligonucleotide Probes	157
12.2.3	Random Amplification and Cy3-labeling of Nucleic Acid	159
12.2.4	Hybridization of Labeled Targets and Data Processing	159
12.3	Results	160
12.3.1	Random Amplification and Hybridization of Cy3-labeled Pathogen DNA Targets	160
12.3.2	Quality Assessment of Intra- and Inter-Operator Variation	161

x | *Contents*

12.3.2.1	Sources of Intra-Operator Experimental Variation	162
12.3.2.2	Sources of Inter-Operator Experimental Variation	164
12.4	Discussion	165
	References	165
