

## Contents

**Preface** XIII

**List of Contributors** XV

### **Part I Basic Principles** 1

- 1 How Bacterial Pathogens were Constructed** 3  
*Ulrich Dobrindt and Jörg Hacker*
- 1.1 Introduction 3
- 1.2 Composition of the Flexible Gene Pool 4
- 1.3 Mechanisms Involved in Genome Dynamics 6
- 1.4 Bacterial Genome Optimization Using *Escherichia coli* as a Model 7
- 1.5 Genome Plasticity during Infection 9
- 1.6 Conclusions 10
- Acknowledgments 10
- References 11
- 2 Antimicrobial Mechanisms of Neutrophils** 17  
*Catherine Chaput and Arturo Zychlinsky*
- 2.1 Introduction 17
- 2.2 Recruitment to Infection Sites 18
- 2.3 Phagocytosis 21
- 2.4 Exocytosis of Secretory Vesicles and Degranulation 22
- 2.4.1 Granules and Secretory Vesicles 23
- 2.4.2 Mobilization and Fusion 24
- 2.5 NETs 25
- 2.6 Neutrophil Function Deficiencies 26
- 2.6.1 Disorders of Adhesion and Chemotaxis 26
- 2.6.2 Disorders of Ingestion and Degranulation 27
- 2.6.3 Disorders of Oxidative Metabolism 27
- 2.7 Conclusion 28
- References 28

<b>3</b>	<b><i>H. pylori</i> Infection—The Route from Inflammation to Cancer</b> 31 <i>Tsutomu Chiba, Hiroyuki Marusawa, Hiroshi Seno, and Norihiko Watanabe</i>
3.1	Introduction 31
3.2	Pathways leading to <i>H. pylori</i> -induced Gastric Carcinogenesis 31
3.2.1	Indirect Action of <i>H. pylori</i> on Gastric Epithelial Cells through Induction of Gastritis 31
3.2.2	Direct Action of <i>H. pylori</i> on Gastric Epithelial Cells 34
3.2.2.1	Roles of CagA in Gastric Carcinogenesis 34
3.2.2.2	Induction of Gene Mutations by <i>H. pylori</i> 35
3.2.2.3	Induction of Aberrant DNA Methylation by <i>H. pylori</i> 37
3.2.3	Relationship between Direct and Indirect Actions of <i>H. pylori</i> on Epithelial Cells in the Development of Gastric Cancer 37
	References 38
<b>Part II Models 43</b>	
<b>4</b>	<b>Host–Pathogen Relationship in Skin and Soft Tissue Infections caused by Group A streptococcus and <i>Staphylococcus aureus</i></b> 45 <i>Inbal Mishalian, Miriam Ravins, Moshe Baruch, Merav Persky, Ilia Belotserkovsky, and Emanuel Hanski</i>
4.1	Introduction 45
4.2	Restriction of GAS and SA Cutaneous Infections by Cationic Antimicrobial Peptides and Bacterial Resistance Mechanisms to these Compounds 46
4.3	Leukocytes and Cutaneous SA and GAS Infection 47
4.3.1	Polymorphonuclear Neutrophils (PMNs) 47
4.3.1.1	The Interactions of SA and GAS with Innate Immunity leading to PMN Response 48
4.3.1.2	Avoidance of SA and GAS Clearance by PMNs 50
4.3.2	Macrophages (M $\phi$ ) 58
4.4	Conclusions 59
	Acknowledgments 60
	References 60
<b>5</b>	<b>Mechanisms of Meningeal Invasion by Septicemic Extracellular Pathogens: The Examples of <i>Neisseria meningitidis</i>, <i>Streptococcus agalactiae</i> and <i>Escherichia coli</i></b> 69 <i>Olivier Join-Lambert, Etienne Carbonnelle, Fabrice Chrétien, Sandrine Bourdoulous, Stéphane Bonacorsi, Claire Poyart, and Xavier Nassif</i>
5.1	Introduction 69
5.2	Bacterial Translocation through the Central Nervous System Vasculature 70
5.2.1	Structural and Functional Heterogeneity of the Blood–CNS Interfaces 70

5.2.1.1	The Blood–Brain Barrier Sensu Stricto	71
5.2.1.2	The Blood-CSF Barriers	74
5.2.2	The Passage of Extracellular Bacterial Pathogens across the Blood–CSF Barrier	75
5.2.2.1	Where is the Blood–CSF Barrier Crossed?	75
5.2.2.2	How do Extracellular Bacteria Breach the Blood–CSF Barrier?	76
5.3	Neonatal Meningitis	79
5.3.1	<i>Escherichia coli</i> Meningitis	79
5.3.1.1	<i>E. coli</i> Strains Causing Neonatal Meningitis (ECNM) Are Oligoclonal	79
5.3.1.2	The Specific Virulence Determinants of ECNM Strains	80
5.3.2	Meningitis Due to Group B <i>Streptococcus</i> (GBS)	82
5.3.2.1	GBS Strains Responsible for Neonatal Meningitis Are Oligoclonal	82
5.3.2.2	The Specific Virulence Determinants of GBS Strains Responsible for Meningitis	83
5.4	Cerebrospinal Meningitis	84
5.4.1	Meningococcal Attributes that Allow Blood-borne Bacteria to Interact with Endothelial Cells	86
5.4.2	Signaling Triggered by <i>N. meningitidis</i> that Leads to the Extravasation of Bacteria through the Brain Vessels	88
	References	91
<b>6</b>	<b>Two Important Bacterial Pathogens causing Community Acquired Pneumonia: <i>Streptococcus pneumoniae</i> and <i>Legionella pneumophila</i></b>	<b>103</b>
	<i>Birgitta Henriques-Normark and Carmen Buchrieser</i>	
6.1	General Background	103
6.2	<i>Streptococcus pneumoniae</i> , a Devastating Pathogen, but also a Common Colonizer of the Upper Respiratory Tract	106
6.2.1	Epidemiology of Pneumococcal Disease and Carriage	106
6.2.2	<i>In vivo</i> Studies of Pneumococcal Infections	108
6.2.3	Pneumococci are Naturally Competent Bacteria	109
6.2.4	Pneumococcal Colonization of the Respiratory Tract	110
6.2.5	Synergism between Influenza Virus and Pneumococci	111
6.2.6	Some Important Bacterial Virulence Factors and their Interactions with the Host	112
6.2.7	Host Defenses against Invading Microbes	117
6.2.8	Pneumococcal Genomes	119
6.3	<i>Legionella pneumophila</i> , an Environmental Bacterium but also a Cause of Severe Sporadic and Epidemic Pneumonia	119
6.3.1	Epidemiology of Legionnaires' Disease and Environmental Reservoir	119
6.3.2	The Dot/Icm Type-IV Secretion System Central to Pathogenesis of <i>Legionella</i>	121

6.3.3	Molecular Mimicry: the Main Virulence Strategy of <i>L. pneumophila</i>	124
6.3.4	Implication of Eukaryotic-like Proteins in Virulence and Host Cell Modulation	125
6.3.4.1	Entry into and Blockade of Phagosomal–Lysosomal Fusion	125
6.3.4.2	Establishment of an ER-derived Replication Vacuole	126
6.3.4.3	Replication in the LCV and Egress from the Host	127
6.3.5	Evolution of the Eukaryotic-like Proteins	127
6.3.6	<i>Legionella</i> Genomes	128
6.3.7	Host response to <i>Legionella</i> infection	129
6.3.7.1	The MyD88 Response is Important for the Control of <i>L. pneumophila</i> Infection	129
6.3.7.2	Naip-5-Dependent Immune Response to Cytosolic Flagellin	130
6.3.7.3	Dictyostelium Transcriptional Host Cell Response upon Infection	130
6.4	Conclusions	131
	Acknowledgment	131
	References	132
<b>7</b>	<b>The <i>Salmonella</i>–Mouse Interaction: A Versatile Model to Study Bacterial Infection</b>	<b>139</b>
	<i>Jessica A. Thompson, Sophie Helaine, and David W. Holden</i>	
7.1	Introduction	139
7.2	Identification of Virulence Genes	141
7.2.1	<i>In vitro</i> Cell Models	141
7.2.2	<i>In vivo</i> Screens for Virulence Genes	142
7.3	Analyzing Gene Function <i>in vivo</i>	146
7.3.1	Measuring the Contribution of Bacterial Genes to Virulence	146
7.3.2	Investigating Interactions between Bacterial Virulence Genes	147
7.3.3	Investigating Interactions between Host and Pathogen Factors	148
7.4	In-depth Analysis of Cell Interactions within Host Tissues	153
7.4.1	Distribution of <i>Salmonella</i>	153
7.4.2	Population Dynamics of Bacteria in the Murine Host	156
7.5	Perspectives	157
	References	158
<b>8</b>	<b><i>Chlamydia</i>: from Molecular Insight to Therapeutic Discovery</b>	<b>165</b>
	<i>Lesley A. Ogilvie, Dagmar Heuer, and Thomas F. Meyer</i>	
8.1	Introduction	165
8.2	<i>Chlamydia</i> : a Model Intracellular Pathogen–Host Relationship	167
8.2.1	The Cycle of Development– <i>C. trachomatis</i>	168
8.2.2	Genetic Determinants of Infection and Disease	172
8.2.2.1	Chlamydial Factors	172
8.2.2.2	Host Factors	173
8.3	A Global Approach to Investigating the Role of Host Cell Factors during Infection	174

- 8.3.1 RNAi: a New Paradigm to Study Pathogenesis 174
- 8.3.2 RNAi and the *Chlamydia*–Host Interaction 178
- 8.4 What can we Expect from the Global RNAi Approach? 179
- 8.4.1 Basic Insights into Cellular Function and Host Susceptibility to Infection 179
- 8.4.2 A New Therapeutic Concept 179
- 8.5 Outlook 181
- Acknowledgments 181
- References 182

### **Part III Global Approaches of Bacterial Virulence 193**

- 9 The Gut Microbiota and its Contribution to Homeostasis 195**  
*Pamela Schnupf and Philippe J. Sansonetti*
- 9.1 Introduction 195
- 9.2 Characteristics of the Gastrointestinal Microbiota 196
- 9.2.1 Methods to Assess Microbial Diversity 196
- 9.2.2 Diversity of the Gastrointestinal Microbiota 199
- 9.2.3 Acquisition of the Gastrointestinal Microbiota 201
- 9.2.4 Competition within the Intestinal Bacterial Community 202
- 9.3 The Symbiosis of the Gut Microbiota and the Host 203
- 9.3.1 Metabolic Functions of the Microbiota 204
- 9.3.2 Development of the Gut Epithelium Architecture 205
- 9.3.3 Maturation of Lymphoid Tissue 206
- 9.3.4 Gut Microbiota Protects against Infection and Transmission of Pathogens 207
- 9.3.5 Gut Microbiota induces Immune Tolerance against Itself, the Host, and Environmental Antigens 207
- 9.3.6 Enteropathogens Exploit Inflammation for their Own Benefit 209
- 9.4 Conclusion 210
- Abbreviations 211
- References 211
- 10 Anatomy of the Gut Barrier and Establishment of Intestinal Homeostasis 215**  
*Gernot Sellge, Pamela Schnupf, and Philippe J. Sansonetti*
- 10.1 Introduction 215
- 10.2 Anatomical, Physiological and Immunological Properties of the Gut Barrier 216
- 10.2.1 The Intestinal Lumen and the Oxygen Availability at the Tips of the Villi 218
- 10.2.2 Goblet Cells and the Mucus Layer 218
- 10.2.3 The Mucosal Epithelium: Physical Barrier and Immune Function 220
- 10.2.4 Intestinal Crypts, Paneth Cells and Antimicrobials 222
- 10.2.5 Innate Immune Cells of the Lamina Propria 224

10.2.6	Antigen Sampling in the Gut	226
10.2.7	The Protective IgA Response	228
10.2.8	The Balance between Regulatory and Effector T Cells in the Gut	230
10.3	Sensing, Signaling and Responding to the Microbiota to Establish a Symbiotic Relationship and Gut Homeostasis	232
10.3.1	Controlling Pro-inflammatory Antigens	233
10.3.2	Sensing the Presence of Microbes from Afar	235
10.3.3	Sensing the Presence of Microbes at the Cell Surface	236
10.3.4	Sensing the Presence of Microbes Intracellularly	237
10.3.5	The Master Regulator of Intestinal Inflammation and Homeostasis: The NF- $\kappa$ B Signaling Pathway	238
10.4	Conclusion	241
	Abbreviations	243
	References	243

**11 Dynamic Imaging Technologies to Explore Infectious Processes at the Cellular, Tissue and Organ Level 251**

*Jost Enninga, Regis Tournebize, Keira Melican, and Agneta Richter-Dahlfors*

11.1	Introduction to Imaging of Host–Pathogen Interactions	251
11.2	Imaging of Infections	253
11.2.1	Airway and Lung Infections	254
11.2.2	Infections of the Gastrointestinal Tract	256
11.2.3	Urinary Tract Infections	262
11.2.4	Meningitis	267
11.3	Clinical Implications	268
11.4	Future Technological Developments	270
	References	271

**12 The Issue of Species Specificity of Bacterial Infection, How to Address It Experimentally 279**

*Olivier Disson, Pascale Cossart, and Marc Lecuit*

12.1	Introduction	279
12.2	Molecular Aspects of Species Specificity	280
12.3	Modelization of Bacterial Invasion Using Human Tissues	
	<i>Ex Vivo</i>	281
12.3.1	<i>Ex Vivo</i> Infection of Blood and Body Fluids	281
12.3.2	<i>Ex Vivo</i> Infection of Solid Tissues	281
12.4	<i>In Vivo</i> Modeling and the Quest for Relevant Animal Models	282
12.4.1	Non-human Primates	282
12.4.2	Non-primate Mammals	282
12.5	<i>In Vivo</i> Modeling with a Focus on the Pathogen rather than the Host	283
12.5.1	Studying a Closely-related Pathogen	283
12.5.2	Modifying the Bacterium	284

12.6	<i>In Vivo</i> Modeling: use of Human Xenografts to generate ‘Humanized’ Animal Models	284
12.7	Genetic Engineering to Circumvent Species-specificity and Generate ‘Humanized’ Animal Models for Human Infectious Diseases	286
12.7.1	Transgenesis	286
12.7.2	Knock-in	287
12.8	<i>Listeria</i> as a Model of Intestinal and Materno-Fetal Infections	287
12.8.1	InlA and InlB are Involved in <i>Lm</i> Invasion of Non-phagocytic Cells <i>In Vitro</i> in a Species-Specific Manner	288
12.8.2	Gastroenteritis	290
12.8.3	Materno-Fetal Infections	292
12.9	<i>Streptococcus pyogenes</i> Infections: from Colonization of Host Epithelial Barriers to Systemic Infection	296
12.9.1	<i>Streptococcus pyogenes</i> (GAS) as a Model of Pharyngitis and Skin Infections	296
12.9.2	Skin Infections	296
12.9.3	Models of Pharyngitis	299
12.9.3.1	<i>Ex Vivo</i>	299
12.9.3.2	<i>In Vivo</i>	299
12.9.4	CbpA, the Adhesin of <i>Streptococcus pneumoniae</i> Involved in Species Specificity for Humans	300
12.10	<i>Neisseria meningitidis</i> and Cerebrospinal Meningitis	301
12.10.1	<i>Neisseria meningitidis</i>	301
12.10.2	CD46 and Meningitis	301
12.10.3	Other Molecular Interactions at the Blood–Brain Barrier Level	303
12.10.4	Other Host-specific Interactions which occur during Meningococcal Infection	303
12.11	Concluding Remarks	303
	References	305
