Preface XIII

List of Contributors XV

1	Biomolecular Solvation in Theory and Experiment	1
	<i>Michael Feig</i>	
1.1	Introduction	1
1.2	Theoretical Views of Solvation	2
1.2.1	Equilibrium Thermodynamics of Solvation	2
1.2.2	Radial Distribution Functions	3
1.2.3	Integral Equation Formalisms	4
1.2.4	Kirkwood–Buff Theory	5
1.2.5	Kinetic Effects of Solvation	5
1.3	Computer Simulation Methods in the Study of Solvation	6
1.3.1	Molecular Dynamics and Monte Carlo Simulations	6
1.3.2	Water Models	7
1.3.3	Solvent Structure and Dynamics from Simulations	8
1.3.4	Free Energy Simulations	10
1.4	Experimental Methods in the Study of Solvation	11
1.4.1	X-Ray/Neutron Diffraction and Scattering	11
1.4.2	Nuclear Magnetic Relaxation	12
1.4.3	Optical Spectroscopy	13
1.4.4	Dielectric Dispersion	13
1.5	Hydration of Proteins	13
1.5.1	Protein Folding and Peptide Conformations in Aqueous Solvent	14
1.5.2	Molecular Properties of Water Near Protein Surfaces	14
1.5.3	Water Molecules at Protein–Ligand and Protein–Protein Interfaces	16
1.6	Hydration of Nucleic acids	16
1.7	Non-Aqueous Solvation	18
1.7.1	Alcohols	18
1.7.2	Urea	18
1.7.3	Glycerol	19
1.8	Summary	19
	References	20

- 2 Model-Free “Solvent Modeling” in Chemistry and Biochemistry Based on the Statistical Mechanics of Liquids 31**
Norio Yoshida, Yasuomi Kiyota, Yasuhiro Ikuta, Takashi Imai, and Fumio Hirata
- 2.1 Introduction 31
- 2.2 Outline of the RISM and 3D-RISM theories 33
- 2.3 Partial Molar Volume of Proteins 38
- 2.4 Detecting Water Molecules Trapped Inside Protein 39
- 2.5 Selective Ion Binding by Protein 42
- 2.6 Water Molecules Identified as a Substrate for Enzymatic Hydrolysis of Cellulose 45
- 2.7 CO Escape Pathway in Myoglobin 47
- 2.7.1 Effect of Protein Structure on the Distribution of Xe 47
- 2.7.2 Partial Molar Volume Change Through the CO Escape Pathway of Myoglobin 49
- 2.8 Perspective 51
- References 52
- 3 Developing Force Fields From the Microscopic Structure of Solutions: The Kirkwood–Buff Approach 55**
Samantha Weerasinghe, Moon Bae Gee, Myungshim Kang, Nikolaos Bentenitis, and Paul E. Smith
- 3.1 Introduction 55
- 3.2 Biomolecular Force Fields 56
- 3.3 Examples of Problems with Current Force Fields 58
- 3.4 Kirkwood–Buff Theory 59
- 3.5 Applications of Kirkwood–Buff Theory 60
- 3.6 The General KBFF Approach 62
- 3.7 Technical Aspects of the KBFF Approach 64
- 3.8 Results for Urea and Water Binary Solutions 65
- 3.9 Preferential Interactions of Urea 68
- 3.10 Conclusions and Future Directions 71
- Acknowledgments 72
- References 73
- 4 Osmolyte Influence on Protein Stability: Perspectives of Theory and Experiment 77**
Char Hu, Jörg Rösgen, and B. Montgomery Pettitt
- 4.1 Introduction 77
- 4.2 Denaturing Osmolytes 78
- 4.2.1 Does Urea Weaken Water Structure? 78
- 4.2.2 Effect of Urea on Hydrophobic Interactions 80
- 4.2.3 Direct Interaction of Urea with Proteins 82
- 4.3 Protecting Osmolytes 83

4.3.1	Do Protecting Osmolytes Increase Water Structure?	83
4.3.2	Effect of Protecting Osmolytes on Hydrophobic Interactions	86
4.4	Mixed Osmolytes	87
4.5	Conclusions	88
	Acknowledgments	88
	References	88

5 Modeling Aqueous Solvent Effects through Local Properties of Water 93

Sergio A. Hassan and Ernest L. Mehler

5.1	The Role of Water and Cosolutes on Macromolecular Thermodynamics	93
5.2	Forces Induced by Water in Aqueous Solutions	95
5.2.1	Interactions in Water-Accessible Regions of Proteins	96
5.2.2	Insight from Atomistic Dynamic Simulations	96
5.2.3	Bulk and Non-Bulk Contributions of the Water Forces	99
5.2.4	Effects of Salts on the Intermolecular Interactions	103
5.3	Continuum Representation of Water	107
5.3.1	Dielectric and Structural Response of Water	108
5.3.2	Electrostatic and Liquid-Structure Forces on Solutes and Cosolutes	111
5.4	Modeling Water Effects on Proteins and Nucleic Acids	112
5.4.1	Calculation of Water Forces in Solutions of Arbitrary Compositions	113
5.4.1.1	Electrostatic Forces	114
5.4.1.2	Liquid-Structure Forces	116
5.4.2	Calculation of pK_a in Proteins	119
	Acknowledgments	122
	References	123

6 Continuum Electrostatics Solvent Modeling with the Generalized Born Model 127

Alexey Onufriev

6.1	Introduction: the Implicit Solvent Framework	127
6.1.1	Key Approximations of the Implicit Solvent Framework	128
6.1.2	The Poisson–Boltzmann model	129
6.2	The Generalized Born Model	131
6.2.1	Theoretical Foundation of the GB Model	131
6.2.2	Computing the Effective Born Radii	135
6.2.2.1	The Integral Approaches	135
6.2.2.2	Representations of the Dielectric Boundary	138
6.2.3	Accounting for Salt Effects	141
6.2.4	The Non-Polar Contribution	142
6.2.5	GB for Non-Aqueous Solvents	143

6.3	Applications of the GB Model	145
6.3.1	Protein Folding and Design	145
6.3.2	“Large-Scale” Motions in Macromolecules	145
6.3.3	Peptides and Proteins in the Membrane Environment	146
6.3.4	pK Prediction and Constant pH Simulations	146
6.3.5	Other Uses	147
6.4	Some Practical Considerations	147
6.4.1	The Accuracy/Speed Tradeoffs	147
6.4.2	GB Computational Time Relative to Explicit Solvent	148
6.4.3	Enhancement of Conformational Sampling	152
6.5	Limitations of the GB Model	154
6.6	Conclusions and Outlook	157
	Acknowledgments	159
	References	159
7	Implicit Solvent Force-Field Optimization	167
	<i>Jianhan Chen, Wonpil Im, and Charles L. Brooks III</i>	
7.1	Introduction	167
7.2	Theoretical Foundations of Implicit Solvent	169
7.2.1	General Principles of Implicit Solvent	169
7.2.2	Continuum Electrostatics	169
7.2.3	Treatment of Non-Polar Solvation	171
7.3	Optimization of Implicit Solvent Force Fields	171
7.3.1	Solvation Free Energies of Small Molecules	172
7.3.2	Potentials of Mean Force of Pairwise Interactions	173
7.3.3	Conformational Equilibria of Model Peptides	175
7.3.4	Folding Simulations of Small Proteins	179
7.3.5	Optimization Based on Other Experimental Measurables	182
7.4	Concluding Remarks and Outlook	182
	Acknowledgments	184
	References	184
8	Modeling Protein Solubility in Implicit Solvent	191
	<i>Hariato Tjong and Huan-Xiang Zhou</i>	
8.1	Introduction	191
8.2	The Models	192
8.2.1	Transfer Free Energy	192
8.2.2	Electrostatic Free Energy	193
8.3	Applications	193
8.3.1	Transfer Free Energy from Octanol to Water	193
8.3.2	Crystalline Phase as a Dielectric Medium	195
8.3.3	Protein Solubility: pH Dependence	197
8.3.4	Protein Solubility: Effects of Mutations	201
8.4	Summary and Outlook	203
	References	204

9	Fast Analytical Continuum Treatments of Solvation	209
	<i>François Marchand and Amedeo Caflisch</i>	
9.1	Introduction	209
9.2	The SASA Implicit Solvent Model: A Fast Surface Area Model	210
9.2.1	Description of the Model	211
9.2.2	Applications of the SASA Implicit Solvent Model	213
9.2.2.1	Reversible Folding of Structured Peptides	213
9.2.2.2	Peptide Aggregation	213
9.2.2.3	Other Applications	215
9.2.3	Limitations of the SASA Implicit Solvent Model	216
9.3	The FACTS Implicit Solvent Model: A Fast Generalized Born Approach	217
9.3.1	Description of the Model	219
9.3.1.1	Atomic (or Self) Electrostatic Solvation Energy	219
9.3.1.2	Total Electrostatic Solvation Energy	221
9.3.1.3	Atomic Solvent-Accessible Surface Area	223
9.3.1.4	Total Solvation Free Energy in the FACTS Model	223
9.3.2	Parameterization of FACTS	223
9.3.3	Validation and Applications of FACTS	224
9.3.3.1	Potential of Mean Forces of Side-Chain Dimers	224
9.3.3.2	Atomic Fluctuations	224
9.3.3.3	Peptide Aggregation	226
9.3.3.4	Scalar and Parallel Performance	226
9.4	Conclusions	227
	Acknowledgments	228
	References	228
10	On the Development of State-Specific Coarse-Grained Potentials of Water	233
	<i>Hyung Min Cho and Jhih-Wei Chu</i>	
10.1	Introduction	233
10.2	Methods of Computing Coarse-Grained Potentials of Liquid Water	235
10.2.1	Multi-Scale Coarse Graining (MS-CG) Method with Force Matching (FM)	235
10.2.2	The Iterative-YBG Method	236
10.2.3	Numerical Issues of the Iterative-YBG Method	237
10.3	Structural Properties and the “Representability” Problem of Coarse-Grained Liquid Water Models	238
10.3.1	Coarse-Grained Water Model Computed from All-Atom Water Potentials	239
10.3.2	Anisotropic Structural Property of Liquid Water	242
10.3.3	Properties of CG Water by Using a Self-Consistent Force Matching Force Field and Pressure Constraint	244

10.4	Conclusions	247
	Acknowledgment	248
	References	248
11	Molecular Dynamics Simulations of Biomolecules in a Polarizable Coarse-Grained Solvent	251
	<i>Tap Ha-Duong, Nathalie Basdevant, and Daniel Borgis</i>	
11.1	Introduction	251
11.2	Theory	253
11.2.1	A Non-Local Formulation of the Dielectric Continuum Theory in Terms of Polarization Density	253
11.2.2	A Local Polarization Density Free-Energy Functional	254
11.2.3	Particular Case of Solutes with Uniform Dielectric Constant	256
11.2.4	Electrostatics on Particles	257
11.2.5	A Phenomenological Dipolar Saturation	258
11.3	Applications: Solvation of All-Atom Models of Biomolecules	259
11.3.1	Parameters and Simulation Conditions	259
11.3.2	Stability of Small Proteins in the PPP Solvent	260
11.3.3	Hydration Properties of Nucleic Acids	264
11.4	Conclusion and Prospects	266
	References	268
12	Modeling Electrostatic Polarization in Biological Solvents	273
	<i>Sandeep Patel</i>	
12.1	Introduction	273
12.2	Current Approaches for Modeling Electrostatic Polarization in Classical Force Fields	275
12.2.1	Charge Equilibration Models: Electronic Polarization and Charge Dynamics	276
12.3	Parameterization of Charge Equilibration Models	278
12.3.1	Establishing Atomic Hardness and Electronegativity Parameters	278
12.3.2	Polarizability	279
12.3.3	Fitting and Force-Field Refinement	281
12.4	Applications of Charge Equilibration Models for Biological Solvents	281
12.4.1	Water	281
12.4.2	Non-Aqueous Solvents: Charge Equilibration Models of Alkanes	283
12.4.2.1	Bulk Liquid Properties	286
12.4.2.2	Local Chain Dynamics	288
12.5	Toward Modeling of Membrane Ion Channel Systems: Molecular Dynamics Simulations of DMPC–Water and DPPC–Water Bilayer Systems	289
12.5.1	Fully Polarizable DMPC Bilayers in TIP4P-FQ Solvent: Application of Charge Equilibration Models for Molecular Dynamics Simulations	290

12.5.2	Component Atomic and Electron Density Profiles	294
12.5.3	Lipid Chain Dynamics	296
12.5.4	Charge Distributions	296
12.5.5	Dipole Moment Variation	299
12.5.6	Dielectric Permittivity Profiles	300
12.6	Conclusions and Future Directions	302
	Acknowledgments	303
	References	303
	Subject Index	309
