Preface IX

- 1 Introduction 1
- 2 **A Pivotal Role of Secondary Oxide Scale During Hot Rolling and for Subsequent Product Quality 7**
  - 2.1 Friction 8
  - 2.2 Heat Transfer 12
  - 2.3 Thermal Evolution in Hot Rolling 17
  - 2.4 Secondary Scale-Related Defects 20
  - References 24
- 3 **Scale Growth and Formation of Subsurface Layers 29**
  - 3.1 High-Temperature Oxidation of Steel 32
  - 3.2 Short-Time Oxidation of Steel 36
  - 3.3 Scale Growth at Continuous Cooling 41
  - 3.4 Plastic Deformation of Oxide Scales 45
  - 3.5 Formation and Structure of the Subsurface Layer in Aluminum Rolling 57
  - References 62
- 4 **Methodology Applied for Numerical Characterization of Oxide Scale in Thermomechanical Processing 67**
  - 4.1 Combination of Experiments and Computer Modeling: A Key for Scale Characterization 67
  - 4.2 Prediction of Mild Steel Oxide Failure at Entry Into the Roll Gap as an Example of the Numerical Characterization of the Secondary Scale Behavior 68
    - 4.2.1 Evaluation of Strains Ahead of Entry into the Roll Gap 69
    - 4.2.2 The Tensile Failure of Oxide Scale Under Hot Rolling Conditions 73
    - 4.2.3 Prediction of Steel Oxide Failure During Tensile Testing 80
    - 4.2.4 Prediction of Scale Failure at Entry into the Roll Gap 89

<b>9</b>	<b>Oxide Scale and Through-Process Characterization of Frictional Conditions for the Hot Rolling of Steel: Industrial Input</b>	<b>271</b>
9.1	Background	271
9.2	Brief Summary of the Main Friction Laws Used in Industry	278
9.3	Industrial Conditions Including Descaling	286
9.3.1	Rolling	286
9.3.1.1	Influence of Roll Gap Shape Factor	286
9.3.1.2	Influence of Pass Geometry and Side Restraints	293
9.3.1.3	Influence of Friction and Tension on Neutral Zone	294
9.3.2	Influence of High-Pressure Water Descaling	299
9.3.3	Influence of Oxide Scale During Rolling	305
9.3.4	Comparison of Processing Conditions Between Flat and Long Products	307
9.3.5	Summary	308
9.4	Recent Developments in Friction Models	308
9.4.1	Mesoscopic Variable Friction Models Based on Microscopic Effects	308
9.4.2	Anisotropic Friction	319
9.4.3	Application to Wear	320
9.4.4	Sensitivity and Regime Maps	321
9.4.4.1	The Effect of Draft on the Coefficient of Friction	325
9.4.4.2	The Effect of Roll Velocity on the Coefficient of Friction	326
9.4.4.3	The Effect of Roll Velocity on the Coefficient of Friction Including the Effect of the Thickness of Secondary Scale, $h_{sc}$	326
9.4.4.4	The Effect of Interpass Time on the Coefficient of Friction for a Range of Secondary Oxide Scale Thickness	327
9.4.4.5	The Effect of Thickness of Secondary Oxide Scale on the Coefficient of Friction	328
9.4.4.6	The Effect of Roll Radius $R_r$ (Effectively Contact Time) on the Coefficient of Friction	329
9.4.4.7	The Effect of Roll Surface Roughness on the Coefficient of Friction with Consideration of the Interpass Time	329
9.4.4.8	The Influence of Roll Surface Roughness and Secondary Oxide Scale on the Coefficient of Friction	330
9.4.5	Macro- and Micromodels of Friction	332
9.4.6	Implementation in Finite Element Models	334
9.5	Application of Hot Lubrication	336
9.5.1	The Effect of Stock Surface Temperature on COF for Different Lubricant Flow Rates	339
9.5.2	The Effect of Lubricant Flow Rate on COF	340
9.5.3	The Effect of Interstand Time, for the Purpose of Secondary Scale Growth, on COF Under Lubrication	340
9.5.4	The Effect of Reduction on COF Under Lubrication	341
9.5.5	The Effect of Roll Speed on COF Under Lubrication	342
9.5.6	Summary of Effect of Hot Lubrication	342
9.6	Laboratory and Industrial Measurements and Validation	343

9.6.1	Typical Laboratory Experimental Procedure	343
9.6.1.1	The Effect of Contact Force and $L/h_m$ Ratio on COF	347
9.6.1.2	The Effect of Scale Thickness on Friction	347
9.6.1.3	The Effect of Lubrication on Friction	347
9.7	Industrial Validation and Measurements	354
9.7.1	Beam Rolling Example	354
9.7.2	Strip Rolling	355
9.7.3	Inverse Analysis Applied to the Evaluation of Friction	356
