Preface *XI*

List of Contributors *XVII*

Part I Innovative Processes in Organic Chemistry 1

1	<i>N</i>-Hydroxy Derivatives: Key Organocatalysts for the Selective Free Radical Aerobic Oxidation of Organic Compounds 3
	<i>Carlo Punta and Cristian Gambarotti</i>
1.1	Introduction 3
1.2	General Reactivity of <i>N</i> -Hydroxy Derivatives 3
1.3	Aerobic Oxidation Catalyzed by <i>N</i> -Hydroxy Amines 6
1.3.1	Aerobic Oxidation of Alcohols to Aldehydes and Ketones 6
1.4	Aerobic Oxidation Catalyzed by <i>N</i> -Hydroxy Amides 9
1.4.1	Peroxidation of Polyunsaturated Fatty Acids 9
1.5	Aerobic Oxidation Catalyzed by <i>N</i> -Hydroxy Imides 10
1.5.1	Oxidation of Benzylalcohols to Aldehydes 10
1.5.2	Oxidation of Silanes 12
1.5.3	Oxidation of <i>N</i> -Alkylamides 12
1.5.4	Oxidation of Tertiary Benzylamines to Aldehydes 13
1.5.5	Oxidative Functionalization of Alkylaromatics 14
1.5.6	Oxidative Acylation of <i>N</i> -Heteroaromatic Bases 15
1.5.7	Aerobic Synthesis of <i>p</i> -Hydroxybenzoic Acids and Diphenols 16
1.5.8	Selective Halogenation of Alkanes 16
1.5.9	Aerobic Oxidation of Cycloalkanes to Diacids 17
1.5.10	Epoxidation of Olefins 18
1.5.11	Oxidation of Alkylaromatics 19
1.6	Conclusions 20
	Acknowledgments 20
	References 21

2	Gold-Catalyzed Intra- and Intermolecular Cycloadditions of Push–Pull Dienynes	25
	<i>Manuel A. Fernández-Rodríguez</i>	
2.1	Introduction	25
2.2	Gold-Catalyzed Enyne Cycloisomerizations	26
2.2.1	General Remarks	26
2.2.2	Influence of the Electronic Nature of the Alkyne Substituent	26
2.2.3	Gold-Catalyzed Cycloaromatization of Push–Pull Dienyne Acids: Synthesis of 2,3-Disubstituted Phenols	29
2.3	Gold-Catalyzed Intermolecular Cycloadditions	34
2.3.1	Cycloadditions of Enynes, Propargyl Acetylenes, and Alkynyl Cyclopropanes	34
2.3.2	Gold-Catalyzed Intermolecular Hetero-Dehydro-Diels–Alder Cycloaddition of Push–Pull Dienynes with Nonactivated Nitriles: Regioselective Synthesis of Pyridines	35
2.4	Conclusions and Future Perspectives	40
	Acknowledgments	40
	References	41
3	N-Heterocyclic Carbenes in Copper-Catalyzed Reactions	43
	<i>silvia Díez-González</i>	
3.1	Introduction	43
3.2	Preparation of NHC-Containing Copper Complexes	43
3.3	Main Applications of [(NHC)Cu] Complexes in Catalysis	46
3.4	Copper Hydride-Mediated Reactions	49
3.4.1	Hydrosilylation of Carbonyl Compounds	49
3.4.2	Mechanistic Considerations	51
3.4.3	Related Transformations	52
3.5	[3 + 2] Cycloaddition of Azides and Alkynes	53
3.5.1	Click Chemistry	53
3.5.2	Use of Internal Alkynes: Mechanistic Implications	55
3.6	Concluding Remarks	57
	Acknowledgments	58
	References	58
4	Supported Organocatalysts as a Powerful Tool in Organic Synthesis	67
	<i>Francesco Giacalone, Michelangelo Gruttadauria, and Renato Noto</i>	
4.1	Introduction	67
4.2	L-Proline and its Derivatives on Ionic Liquid-Modified Silica Gels	69
4.3	Polystyrene-Supported Proline as a Versatile and Recyclable Organocatalyst	73
4.3.1	Nonasymmetric Reactions	75
4.3.1.1	α -Selenenylation of Aldehydes	75
4.3.1.2	Baylis–Hillman Reaction	77
4.3.2	Asymmetric Reactions	79

4.3.2.1	Aldol Reaction	79
4.4	Prolinamide-Supported Polystyrenes as Highly Stereoselective and Recyclable Organocatalysts for the Aldol Reaction	82
4.5	Outlook and Future Perspectives	84
	References	85
5	The Complex-Induced Proximity Effect in Organolithium Chemistry and Its Importance in the Lithiation of Tertiary Amines	95
	<i>Viktoria H. Gessner</i>	
5.1	Introduction	95
5.2	State of the Art	96
5.2.1	Structure Formation Patterns of Organolithium Compounds	96
5.2.2	The Complex-Induced Proximity Effect (CIPE)	97
5.2.3	Synthesis of α -Lithiated Tertiary Amines	99
5.3	Latest Developments	101
5.3.1	Precoordination as Key to Direct Deprotonation of Tertiary Amines	101
5.3.2	Regioselective α -Lithiation	104
5.3.3	α -Lithiation versus β -Lithiation	108
5.4	Conclusions and Outlook	110
	Acknowledgments	111
	References	111
	Part II Predictive Tools in Organic Chemical Reactions	115
6	Double Hydrogen Bonding in Asymmetric Organocatalysis: A Mechanistic Perspective	117
	<i>Tommaso Marcelli</i>	
6.1	Introduction	117
6.2	Diols and Amidoalcohols	119
6.2.1	Single-Point versus Two-Point Activation	119
6.2.2	The Impact of Acidity on Enantioselectivity	120
6.3	(Thio)ureas	122
6.3.1	Mechanistic Duality in Aminothiurea Catalysis	122
6.3.2	Mono- versus Bidentate Coordination	125
6.3.3	Catalyst Self-Association	126
6.3.4	Halide Binding	127
6.4	Phosphoric Acids	129
6.4.1	Bifunctionality	130
6.4.2	Competent Substrates	133
6.5	Other Catalysts	134
6.5.1	Guanidiniums	134
6.5.2	Squaramides	135
6.5.3	Quinolinium Thioamides	136

6.6	Conclusions and Outlook	137
	References	138
7	Dynamic Covalent Capture: A Sensitive Tool for Detecting Molecular Interactions	143
	<i>Leonard Prins</i>	
7.1	Introduction	143
7.2	Hydrogen Bond–Driven Self-Assembly in Aqueous Solution	144
7.3	Measuring Stability and Order in Biological Structures	146
7.3.1	Peptides	146
7.3.2	Bilayer Membranes	149
7.4	Drug Discovery	150
7.5	Catalyst Discovery	152
7.6	The Analysis of Complex Chemical Systems	156
7.6.1	^1H - ^{13}C HSQC NMR Spectroscopy	156
7.6.2	UV/Vis Spectroscopy	158
7.7	Perspective	160
	Acknowledgments	162
	References	162
	Part III Chemical Reactions, Sustainable Processes, and Environment	165
8	Furfural and Furfural-Based Industrial Chemicals	167
	<i>Ana S. Dias, Sérgio Lima, Martyn Pillinger, and Anabela A. Valente</i>	
8.1	Carbohydrates for Life	167
8.2	Furfural–Evolution over Nearly Two Centuries	169
8.3	Applications of Furfural	169
8.4	Mechanistic Considerations on the Conversion of Pentosans into Furfural	170
8.5	Production of Furfural	172
8.5.1	Crystalline Microporous Silicates	173
8.5.2	Functionalized Mesoporous Silicas	174
8.5.3	Transition Metal Oxide Nanosheets	179
8.6	Conclusion and Future Perspectives	180
	Acknowledgments	182
	References	182
9	Multiple Bond-Forming Transformations: the Key Concept Toward Eco-Compatible Synthetic Organic Chemistry	187
	<i>Yoann Coquerel, Thomas Boddaert, Marc Presset, Damien Mailhol, and Jean Rodriguez</i>	
9.1	The Science of Synthesis	187
9.2	Multiple Bond-Forming Transformations (MBFTs)	190
9.2.1	Consecutive Reactions	190

9.2.2	Domino Reactions	190
9.2.3	Multicomponent Reactions	191
9.2.4	One-Pot Reactions	191
9.3	An Account of Our Recent Contributions	192
9.3.1	MBFTs Involving a Wolff Rearrangement	192
9.3.2	MBFTs Involving Metals	194
9.3.3	MBFTs Involving Anions	196
9.4	Conclusion	200
	References	200
10	Modeling of Indirect Phototransformation Reactions in Surface Waters	203
	<i>Davide Vione, Radharani Das, Francesca Rubertelli, Valte Maurino, and Claudio Minero</i>	
10.1	Introduction	203
10.2	Indirect Photolysis Processes in Surface Waters	205
10.2.1	Reactions Induced by $\bullet\text{OH}$	206
10.2.2	Reactions Induced by $\text{CO}_3^{\bullet-}$	209
10.2.3	Reactions Induced by ${}^3\text{CDOM}^*$	211
10.2.4	Other Reactions	212
10.3	Modeling the Photochemistry of Surface Waters	214
10.3.1	Modeling the Absorption Spectrum of Lake Water	214
10.3.2	Mass versus Concentration Approach in Photochemistry Models	216
10.3.3	Radiation Absorption by Photoactive Water Components	217
10.3.4	Generation and Reactivity of $\bullet\text{OH}$ upon Irradiation of CDOM, Nitrate, and Nitrite	218
10.3.5	Formation and Reactivity of $\text{CO}_3^{\bullet-}$ in Surface Waters	223
10.3.5.1	Oxidation of $\text{HCO}_3^{\bullet-}$ and CO_3^{2-} by $\bullet\text{OH}$	224
10.3.5.2	Oxidation of CO_3^{2-} by ${}^3\text{CDOM}^*$	224
10.3.5.3	Reactivity of $\text{CO}_3^{\bullet-}$ in Surface Waters	225
10.3.6	Formation and Reactivity of ${}^3\text{CDOM}^*$ in Surface Waters	226
10.4	Conclusions and Perspectives	230
	Acknowledgment	231
	References	231
	Part IV Organic Synthesis and Materials	235
11	Bottom-Up Approaches to Nanographenes through Organic Synthesis	237
	<i>Diego Peña</i>	
11.1	Introduction	237
11.2	Alternant Polyarenes with 10 Fused Benzene Rings	239
11.3	Alternant Polyarenes with 11 Fused Benzene Rings	244
11.4	Alternant Polyarenes with 12 Fused Benzene Rings	248
11.5	Alternant Polyarenes with 13 Fused Benzene Rings	249

11.6	Alternant Polyarenes with 14 Fused Benzene Rings	252
11.7	Alternant Polyarenes with More than 15 Fused Benzene Rings	252
11.8	Conclusions and Outlook	256
	Acknowledgments	257
	References	257
12	Differentiated Ligands for the Sequential Construction of Crystalline Heterometallic Assemblies	263
	<i>Stéphane A. Baudron</i>	
12.1	Introduction	263
12.2	Dithiolate Ligands	268
12.2.1	Metallatectons	268
12.2.2	Infinite Chains	270
12.2.3	Discrete Assemblies	271
12.3	Dipyrrin Ligands	273
12.3.1	Metallatectons	274
12.3.2	Heterometallic Architectures Built with the Assistance of an Ag- π Interaction	274
12.4	Conclusion and Outlook	277
	Acknowledgments	278
	References	278
13	Water-Soluble Perylene Dyes	283
	<i>Cordula D. Schmidt and Andreas Hirsch</i>	
13.1	History and Functionalization of Perylene Dyes	283
13.2	Derivatization of Perylene Dyes	284
13.3	Properties and Applications of Perylene Dyes	286
13.4	Advantages and Applications of Water-Soluble Perylene Derivatives	286
13.5	Symmetric Water-Soluble PDIs	289
13.6	Unsymmetric PDIs	292
13.6.1	Noncovalent Functionalization of Carbon Nanotubes	293
13.6.2	PDIs as Reporter Electrolytes for Implantation Technology	296
13.7	Chiral Water-Soluble PDIs	297
13.8	Conclusion and Outlook	300
	Acknowledgments	301
	References	301
