**Preface** XIII

**List of Contributors** XIX

### **Part I Preparation of New Materials and Nanomaterials** 1

<b>1</b>	<b>Self-Assembling Cyclic Peptide-Based Nanomaterials</b>	<b>3</b>
	<i>Roberto J. Brea</i>	
1.1	Introduction	3
1.2	Types of Self-Assembling Cyclic Peptide Nanotubes	4
1.2.1	Nanotubular Assemblies from Cyclic D,L- $\alpha$ -Peptides	4
1.2.1.1	Solid-State Ensembles: Microcrystalline Cyclic Peptide Nanotubes	4
1.2.1.2	Solution Phase Studies of Dimerization	5
1.2.2	Nanotubular Assemblies from Cyclic $\beta$ -Peptides	6
1.2.3	Nanotubular Assemblies from Other Cyclic Peptides	7
1.3	Applications of Cyclic Peptide Nanotubes	8
1.3.1	Antimicrobials	8
1.3.2	Biosensors	9
1.3.3	Biomaterials	10
1.3.4	Electronic Devices	11
1.3.5	Photoswitchable Materials	11
1.3.6	Transmembrane Transport Channels	12
1.4	Nanotubular Assemblies from Cyclic $\alpha$ , $\gamma$ -Peptides	13
1.4.1	Design	14
1.4.2	Homodimers Formation	14
1.4.3	Heterodimers Formation	16
1.4.4	Applications	17
1.4.4.1	Artificial Photosystems	17
1.4.4.2	Multicomponent Networks: New Biosensors	17
1.4.4.3	Other Applications	19

1.5	Summary and Outlook	19
	References	19
<b>2</b>	<b>Designer Nanomaterials for the Production of Energy and High Value-Added Chemicals</b>	<b>23</b>
	<i>Rafael Luque</i>	
2.1	Introduction	23
2.2	State of the Art in the Preparation of Designer Nanomaterials for the Production of Energy and Chemicals	27
2.2.1	Preparation of Nanomaterials	27
2.2.1.1	Physical Routes	27
2.2.1.2	Chemical Routes	30
2.2.1.3	Physicochemical Routes	33
2.2.2	Production of Energy and Chemicals: the Biorefinery Concept	34
2.2.2.1	Energy	34
2.2.2.2	Catalysis	38
2.2.2.3	Other Applications	41
2.3	Highlights of Own Research	41
2.3.1	Sustainable Preparation of SMNP and Catalytic Activities in the Production of Fine Chemicals	41
2.3.1.1	Supported Metallic Nanoparticles: Preparation and Catalytic Activities	41
2.3.1.2	Supported Metal Oxide Nanoparticles: Preparation and Catalytic Activities	44
2.3.1.3	Other Related Nanomaterials	46
2.3.2	Preparation of Designer Nanomaterials for the Production of Energy	49
2.3.2.1	Biodiesel Preparation Using Metal Oxide Nanoparticles	49
2.3.2.2	Fuels Prepared via Thermochemical Processes	50
2.4	Future Prospects	53
2.4.1	Future of the Preparation of SMNPs	53
2.4.2	Applications of SMNPs for the Future	54
2.4.2.1	Fuel Cells	54
2.4.2.2	Catalysis of Platform Molecules	54
2.4.2.3	Environmental Remediation	56
2.4.2.4	Advanced NMR Applications	56
2.5	Conclusions	57
	Acknowledgments	57
	References	58
<b>3</b>	<b>Supramolecular Receptors for Fullerenes</b>	<b>65</b>
	<i>Gustavo Fernández, Luis Sánchez, and Nazario Martín</i>	
3.1	Introduction	65
3.2	Classic Receptors for Fullerenes Based on Curved Recognizing Units	66

3.3	Receptors for Fullerenes Based on Planar Recognizing Units	71
3.4	Concave Receptors for Fullerenes	75
3.5	Concave Electroactive Receptors for Fullerenes	79
3.6	Conclusions and Future Perspectives	86
	Acknowledgments	87
	References	88
<b>4</b>	<b>Click Chemistry: A Quote for Function</b>	<b>93</b>
	<i>David DíazDíaz</i>	
4.1	Introduction	93
4.2	New Applications in Materials Synthesis	95
4.2.1	Metal Adhesives	95
4.2.2	Synthesis and Stabilization of Gels	102
4.2.2.1	Strength Enhancement of Nanostructured Organogels	102
4.2.2.2	Synthesis of Polymer Thermoreversible Gels	106
4.2.2.3	Synthesis of Degradable Model Networks	107
4.2.3	Functionalization of SWNTs with Phthalocyanines	107
4.3	Perspective	110
	Acknowledgments	111
	References	111
<b>5</b>	<b>Supramolecular Interactions and Smart Materials: C–X . . . X'–M Halogen Bonds and Gas Sorption in Molecular Solids</b>	<b>115</b>
	<i>Guillermo Mínguez Espallargas</i>	
5.1	Introduction	115
5.2	Interactions Involving Halogens: Nucleophiles versus Electrophiles	116
5.2.1	Halogens as Nucleophiles	117
5.2.2	Halogens as Electrophiles	118
5.3	Combining Complementary Environments: C–X . . . X'–M Halogen Bonds	120
5.4	Smart Materials for Gas Sorption	124
5.4.1	Physisorption of Gases (Type I)	124
5.4.2	Chemisorption of Gases (Type II)	126
5.4.3	Chemisorption of Gases with Incorporation into the Framework (Type III)	127
5.4.4	Combined Physisorption and Chemisorption of Gases with Incorporation into the Framework (Type IV)	128
5.4.5	Double Chemisorption of Gases with Incorporation into the Framework (Type V)	128
5.5	Conclusions	132
	Acknowledgments	133
	References	133

**Part II Innovative Characterization Methods 139**

- 6 Application of Advanced Solid-State NMR Techniques to the Characterization of Nanomaterials: A Focus on Interfaces and Structure 141**  
*Niki Baccile*
- 6.1 Introduction 141
  - 6.2 Solid-State NMR Tools 141
  - 6.3 Nanocarbons 147
    - 6.3.1 Fullerenes 147
    - 6.3.2 Nanotubes 148
  - 6.4 Nanoparticles 151
  - 6.5 Quantum Dots 154
  - 6.6 Self-Assembly 157
  - 6.7 Mesostructured Materials 159
    - 6.7.1 Structure 160
    - 6.7.2 Interaction at Interfaces 162
    - 6.7.3 Confinement of Organic Molecules within Nanopores 163
    - 6.7.4 Surface and Bulk Functionalization 165
  - 6.8 Study of Interfaces and Structure by Solid State NMR 165
    - 6.8.1 Double Cross-Polarization Experiments to Probe the Silica/CTAB Interface 166
    - 6.8.2 Heteronuclear Correlation Experiments to Probe the Phenyl Functionalization in Silica/CTAB Interface 168
    - 6.8.3 Structural Study of Mesoporous Silica/Calcium Phosphate Composite Materials for Bone Regeneration via TRAPDOR Experiments 169
    - 6.8.4 Structural Resolution of Amorphous Carbon Microspheres via  $2D^{13}C-^{13}C$  Double Quantum NMR Experiments 170
  - 6.9 Conclusion 172
    - Acknowledgments 172
    - References 173
- 7 New Tools for Structure Elucidation in the Gas Phase: IR Spectroscopy of Bare and Doped Silicon Nanoparticles 183**  
*Philipp Gruene, Jonathan T. Lyon, Gerard Meijer, Peter Lievens, and André Fielicke*
- 7.1 Introduction 183
  - 7.2 Methods for Structural Investigation of Silicon Clusters 185
    - 7.2.1 Ion Mobility Measurements 185
    - 7.2.2 Anion Photoelectron Spectroscopy 186
    - 7.2.3 Matrix Isolation Vibrational Spectroscopy 187
  - 7.3 Infrared Multiple Photon Dissociation Spectroscopy 188
    - 7.3.1 Gas Phase Spectroscopy Using Free-Electron Lasers 188
    - 7.3.2 Working Principles of an FEL 188
    - 7.3.3 Infrared Multiple Photon Excitation 189

7.3.4	Dissociation Spectroscopy with the Messenger Technique	190
7.3.5	Experimental Realization	191
7.4	IR-Spectroscopy on Bare Silicon Cluster Cations	193
7.4.1	Introduction	193
7.4.2	Results and Discussion	194
7.5	Chemical Probe Method for Endo- and Exohedrally Doped Silicon Clusters	196
7.5.1	Introduction	196
7.5.2	Results and Discussion	197
7.6	IR-Spectroscopy on Exohedrally Doped Silicon Cluster Cations	199
7.6.1	Introduction	199
7.6.2	Results and Discussion	199
7.7	Summary and Outlook	201
	References	202
<b>8</b>	<b>Direct Observation of Dynamic Solid-State Processes with X-ray Diffraction</b>	<b>207</b>
	<i>Panče Naumov</i>	
8.1	Introduction	207
8.2	The Basics: Principles, Applications, Advantages and Drawbacks of the X-ray Photodiffraction Method	209
8.3	Steady-State X-ray Photodiffraction: Examples	213
8.3.1	Transfer of Chemical Groups or Atoms, and Electrocyclization/Ring Opening	213
8.3.2	Bond Isomerizations and Photolytic Reactions	215
8.3.3	Structures of Species in Excited States, Electron Transfer, and Spin Crossover	218
8.4	Time-Resolved X-ray Photodiffraction: Representative Examples	221
8.5	Conclusions and Future Outlook	223
	Acknowledgments	224
