Preface IX

1	Basic Concepts	1
1.1	Introduction	1
1.2	Modeling Physical Phenomena	3
1.3	Number Representation on the Computer	11
1.4	Elementary Operations	15
1.5	Error Sources	15
1.5.1	Model Error	15
1.5.2	Approximation Error	16
1.5.3	Round-Off Error	16
1.5.4	Local and Propagation Errors	18
1.6	Error Propagation	19
1.6.1	First Device	21
1.6.2	Second Device	23
1.6.3	Third Device	24
1.7	Decision-Making for an Optimal Program	24
1.7.1	Check of the Physical Phenomenon	24
1.7.2	Mathematical Formulation	25
1.7.3	Selection of the Best Algorithm	27
1.8	Selection of Programming Languages: Why C++?	36
2	Some Utilities in the BzzMath Library	39
2.1	Introduction	39
2.2	Messages and Printing	39
2.3	Save and Load	40
2.4	Integer Algebra	42
2.4.1	BzzVectorInt Class	44
2.4.2	BzzMatrixInt	51
2.5	BzzVectorIntArray and BzzVectorArray	55
2.6	BzzMatrixCoefficientsExistence	57

2.7	BzzMatrixExistence	60
2.8	BzzSymmetricMatrixCoefficientsExistence	62
2.9	Complex Numbers	64
2.10	Miscellaneous Utilities	65
2.11	BzzPlot.exe and BzzPlotSparse.exe	66
3	Linear Algebra	69
3.1	Introduction	69
3.2	Classes for Linear Algebra	72
3.3	BzzVector Class	73
3.4	BzzMatrix Class	79
3.5	Vector and Matrix Norms	84
3.6	Structured Matrices	91
3.7	Sparse Unstructured Matrices	100
3.8	Symmetric Matrices	107
3.9	Linear Algebra Operations	109
4	Square Linear Systems	115
4.1	Introduction	115
4.1.1	Cramer's Method	122
4.1.2	Use of Inverse Matrices	123
4.2	Gauss Elimination	124
4.3	Gauss Transformation	127
4.4	Classical Gauss Factorization	129
4.5	Alternative Methods	133
4.6	Conditioning of Linear Systems	137
4.7	Best Pivot Selection	149
4.8	Solution Features	154
4.9	Class for Linear System Solution	158
4.10	Condition Number Computation	165
4.11	Determinant Evaluation	166
4.12	Inverse Matrix	167
4.13	Sparse Matrices	170
4.14	Classes for Linear System Solution with Sparse Unstructured Matrices	175
5	Structured Linear Systems	181
5.1	Introduction	181
5.2	Symmetric Matrices	181
5.2.1	Classes to Factorize Symmetric Matrices	185
5.2.2	Factorization Updating	188
5.3	Symmetric Sparse Matrices	190
5.4	Band Matrices	194
5.5	Diagonal Block Matrices	196
5.6	Iterative Methods	198

5.6.1	Richardson Method	199
5.6.2	Jacobi Method	199
5.6.3	Forward Gauss–Seidel Method	199
5.6.4	Backward Gauss–Seidel Method	200
5.6.5	Forward and Backward Gauss–Seidel Method	201
5.6.6	Variants	201
5.7	Systems Generated by Special Physical Problems	201
5.7.1	Direct Methods	202
5.7.2	Mixed Direct and Iterative (Hybrid) Methods	217
6	Overdimensioned Linear Systems	225
6.1	Introduction	225
6.2	Orthogonal Matrices	226
6.3	Problem Conditioning	227
6.4	Method of Least Squares	230
6.5	Orthogonal Transformation	234
6.5.1	Givens Transformation Matrices	237
6.5.2	Householder Transformation Matrices	238
6.6	QR Factorization	241
6.6.1	Givens Factorization	241
6.6.2	Householder Factorization	242
6.6.3	Square Systems	243
6.6.4	Hessenberg Matrix Transformation	244
6.6.5	Upgrading of the QR Factorization	245
6.7	Classes for QR Factorization	247
6.8	SVD Factorization	253
6.9	Class for SVD Factorization	255
6.10	Advantages of SVD Factorization	258
6.10.1	Matrices with Maximum Rank $r=n$	258
6.10.2	Matrices with Rank $r<n$	260
6.10.3	Null Space and Range Space	264
6.10.4	Data Compression	267
7	Underdimensioned Linear Systems	269
7.1	Introduction	269
7.2	LQ Factorization	270
7.3	Classes for LQ Factorization	272
7.4	Null Space	276
7.5	Minimization with Linear Constraints	281
7.6	Minimizing a Sum of Squares Subject to Linear Constraints	288
7.7	Special Problems Solved by LQ Factorization	290
7.7.1	Problem No. 1	290
7.7.2	Problem No. 2	291
7.7.3	Problem No. 3	292

7.7.4	Problem No. 4	293
7.7.5	Problem No. 5	293
7.7.6	Problem No. 6	294
7.7.7	Problem No. 7	295
7.7.8	Problem No. 8	296
7.7.9	Problem No. 9	297
7.7.10	Problem No. 10	298
7.7.11	Problem No. 11	299

8 Eigenvalues and Eigenvectors for Symmetric Matrices 305

8.1	Introduction	305
8.2	Eigenvalues of Symmetric Matrices	307
8.3	Power Method	309
8.4	Inverse Power Method	312
8.5	Inverse-Translate Power Method	314
8.6	Jacobi Method	315
8.7	QR Algorithm	316
8.8	Eigenvalues of Rank-2 Matrices	319

9 Iterative Processes 323

9.1	Introduction	323
9.2	Convergence of an Iterative Algorithm	324
9.3	Convergence Speed	325
9.4	Convergence Accelerators	326
9.5	Extrapolation	328
9.5.1	Error Estimation	331
9.5.2	Solution Improvement	333
9.6	Extrapolation Methods	334
9.6.1	Aitken Method	334
9.6.2	Richardson Method	335
9.6.3	Polynomial Extrapolation	336
9.6.4	Extrapolation with Rational Functions	337
9.7	Class for Numerical Derivation	337
