Foreword *XXI*

Preface and Acknowledgements *XXIII*

List of Figures *XXV*

List of Tables *XXXV*

Abbreviations, Acronyms, and Cell Lines *XXXIX*

Volume 1

Part 1

General Aspects and Documentary Resources

1

Systems of Classification of Living Organisms: Great Steps in Chemical and Biological Evolution 3

Whittaker's five kingdoms system 3

Discovery of Archaea(Archaeobacteria): ternary model of living organisms 4

Characteristics of cell membranes 5

Some recent data on terpenes 7

Main stages of evolution 8

Exceptional resources of marine biodiversity 9

Selection of documentary resources 10

References 10

Websites 12

2

General Information on the Marine Environment 13

Physicochemical aspects 13

Chemical composition of seawater 13

Optical properties of seawater 15

Rapid absorption of light in relation to depth 15

Selective absorption of the wavelengths 15

Biological and ecological aspects 16

Primary and secondary metabolites 16

Ecomones: vectors of chemical communication 16

Phenomena of dependence 16

Dependence on light 16

Dependence on temperature 17

Dependence on salinity 17

Main types of interspecific relations 17

Commensalism 17

Symbiosis 17

Parasitism 17

The hierarchy of ecological levels and space distribution of marine organisms 18

Plant biodiversity: phylogeny of the algae 18

Animal biodiversity 21

Biochemical characteristics of sessile animals 23

Estimation of biomass 23

Selection of documentary resources 24

References 24

Websites 25

3

Chemistry of Marine Natural Substances: Originality, Diversity, Distribution 27

General introduction 27

Distribution of nitrogenous and non-nitrogenous secondary metabolites 27

Distribution of secondary metabolites by chemical class 28

Characteristics of the secondary metabolites of marine organisms 29

Incorporation of halogens 30

Incorporation of sulfur 31

Incorporation of silicon 32

VIII Contents

Rare chemical elements encountered in marine substances: As, B, Ni, V, Zn 32

- Arsenic 32
- Boron 32
- Nickel 33
- Vanadium 33
- Zinc 33

Selection of documentary resources 34

- References 34
- Websites 36

4

Basic Marine Pharmacology 37

The hopes of the past 37

The realities of the present 39

1. Ethnopharmacology 39
2. The triptych: biodiversity–chemodiversity–pharmacodiversity 40
3. Methods 44

Future directions 46

Selection of documentary resources 53

- References 53
- Websites 56

5

Documentary Resources 59

Short historical background 59

Printed documentation 60

- Chemical Abstracts, Biological Abstracts, Current Contents 60
- Basic works 60
- Reference works 61
- Articles published in volumes not entirely dedicated to marine organisms 61
- Scientific journals and the impact factor 62
- Scientific journals specializing in developments in natural marine products 62
- Articles about development published in scientific journals 65
- Proceedings of the major international symposia 66
- General articles on the synthesis of marine natural products 66

Electronic documentation 67

- “Static” databases 68
- “Dynamic” databases 68
- Searching for information on the Internet 68

Part 2 Archaea (Archebacteria) and Eubacteria

6

Archaea (Archeobacteria) 73

General introduction 73

Membrane lipids 74

Pranylquinones 79

Cyclic polysulfides 80

Bacteriorhodopsin of halophiles 81

Extremozymes 82

Appendix 1: Stereospecific numbering (*sn*) 83

Selection of documentary resources 83

- References 83
- Experimental documentation 85
- Websites 85
- Synthesis 86

7

Eubacteria – 1 87

Cell walls and Gram reaction 87

- Anaerobic and aerobic photosynthesis: bacteriochlorophylls 88

Brief overview of marine bacteria 90

Piezophile (barophile) and psychrophile bacteria from extreme environments 91

Examples of metabolites isolated from non-photosynthetic bacteria 91

Lipopolysaccharides and other characteristics of some Gram-negative bacteria 106

Anaerobic photosynthetic bacteria 107

Aerobic photosynthetic bacteria 107

Anammox bacteria and “ladderane lipids” 108

Appendix 2 110

Selection of documentary resources 111

- References 111
- Websites 116
- Synthesis 116

8

- Eubacteria – 2** 121
- Prochlorophyta 121
- Taxonomy of Prochlorophyta 121
- Unique characteristics of photosynthesis in *Prochlorococcus* 122
- Biochemical data on *Prochloron didemni* 123
- Biochemical data on *Prochlorothrix hollandica* 123
- Cyanobacteria 124
- Traditional classification of cyanobacteria 124
- Photosynthetic pigments 125
- Membrane lipids 128
- General characteristics of the secondary metabolites 129
- Malyngamides and other chlorinated derivatives 130
- Semiplenamides A–G and besarhanamides A–B 133
- Aplysiatoxin, oscillatoxin-A and other brominated derivatives 134
- Other non-peptidic nitrogenous derivatives 135
- Lipopeptides, peptides and depsipeptides 137
- Other toxins 147
- Sulfated compounds 148
- Polymethoxyalkenes and poly- β -hydroxybutyric acids (PHBAs) 150
- Other molecules 151
- Appendix 3 153
- Appendix 4 154
- Selection of documentary resources 155
- References 155
- Websites 162
- Synthesis 163

Part 3

Photosynthetic Eukaryotes

9

- Bacillariophyceae (Diatoms)** 173
- Frustules: fundamental characteristics of diatoms 173
- Bases of classification of diatoms 174
- Primary metabolites 174
- Photosynthetic pigments 174
- Membrane lipids 175
- Terpenic hydrocarbons 177
- Other terpenic derivatives: description of the two biosynthetic pathways 179
- Genera *Nitzschia* and *Pseudo-nitzschia*: domoic acid 180
- Other molecules 181
- Appendix 5 183
- Appendix 6 184
- Selection of documentary resources 185
- References 185
- Websites 187
- Synthesis 188

10

- Chrysophyceae, Raphidophyceae, Haptophyceae** 191
- Chrysophyceae** 191
- General presentation: simplified classification 191
- Photosynthetic pigments and storage polysaccharides 191
- Fatty acids 191
- Sterols 191
- Other derivatives 192
- Raphidophyceae** 193
- Haptophyceae** 193
- General presentation: simplified classification 193
- Photosynthetic pigments 194
- Sterols 194
- Fatty acids and other linear derivatives 195
- Prymnesins 196
- Particular characteristics of *Pavlova pinguis* and *Pleurochrysis carterae* 197

X Contents

Appendix 7 198

- Selection of documentary resources 199
- References 199
- Websites 200
- Synthesis 200

11

Dinophyceae (Dinoflagellates) 201

- General aspects 201
- Classification of dinoflagellates 202
- Photosynthetic pigments 202
- Sulfated exopolysaccharides 203
- Sterols 204
- Fatty acids 204
- Glycolipids 207
- Amphidinols and other polyhydroxylated polyenic derivatives 207
- Toxic proliferations: endo- and exotoxins 211
- Main types of dinoflagellate toxins 212
- Cyclic polyethers 212
- Okadaic acid and derivatives 220
- Toxic macrolides: amphidinolides, caribenolide, goniodomin A, hoffmanniolide 222
- Complexity of the biosynthesis of polyketides 225
- Saxitoxin and its derivatives 225
- Nitrogenous toxins with imine function 228
- Zooxanthellatoxins (ZTs) and other nitrogenous toxins 229
- Pfiesteria piscicida*: a particularly toxic dinoflagellate 232
- Sulfur-containing derivatives 232
- Phosphorus derivatives 233
- Selection of documentary resources 233
- References 233
- Websites 241
- Synthesis 242

12

Chlorophyceae (Green Algae) and Marine Spermatophyta 251

- General aspects 251
- Elements of classification of marine macroalgae 251
- Classification of Chlorophyceae 252
- Chlorophylls, carotenes and xanthophylls 252
- Storage polysaccharides: starches 254
- Cell-wall polysaccharides 255
- Matrix polysaccharides 255
- Membrane lipids: fatty acids and sterols 255
- Oxylipins 258
- Background on the secondary metabolites of Chlorophyceae 259
- Terpenes 259
- Meroterpenes of Dasycladales 262
- Aromatic derivatives 263
- Amino acids, amines, betaines 264
- Peptides and depsipeptides: kahalalides 264
- Other nitrogen-containing derivatives 265
- Sulfur-containing derivatives 267
- Marine Spermatophyta (phanerogams) 267
- Selection of documentary resources 268
- References 268
- Websites 272
- Synthesis 273

13

Rhodophyceae (Red Algae) 275

- Special features of red algae 275
- Classification of Rhodophyceae 275
- Photosynthetic pigments 277
- Storage monosaccharides and polysaccharides 278
- Skeleton polysaccharides 278
- Matrix polysaccharides: carrageenans and agars 278
- Carrageenophytes and agarophytes 281
- Gelling agents and thickeners 281

- Other types of matrix polysaccharides 282
- Phospholipids and fatty acids 282
- Oxylipins and prostaglandins 284
- Sterols and ecdysteroids 285
- General comments on the secondary metabolites 286
- Secondary metabolites of Cryptonemiales 287
- Secondary metabolites of Gelidiales 290
- Secondary metabolites of Rhodymeniales 290
- Polyhalogenated monoterpenes of Gigartinales 291
- Diterpenes of *Sphaerococcus coronopifolius* (Gigartinales, Sphaerococcaceae) 293
- Macrocyclic pyrones of *Phacelocarpus labillardieri* (Gigartinales, Sphaerococcaceae) 297
- Polycavernosides of *Polycavernosa tsudai* (Gigartinales, Gracilariaceae) 297
- Brominated meroditerpenes of *Callophycus serratus* (Gigartinales, Solieriaceae) 298
- Halogenated phloroglucinols of *Rhabdonia verticillata* (Gigartinales, Solieriaceae) 299
- Sulfated aromatic derivatives of *Tichocarpus crinitus* (Gigartinales, Tichocarpaceae) 299
- Nitrogen-containing derivatives of Gigartinales 299
- Halogenated compounds of Ceramiales: general comments 300
- Polyhalogenated monoterpenes of *Pantoneura plocamioides* (Ceramiales, Delesseriaceae) 301
- Sesquiterpenes of *Laurencia* (Ceramiales, Rhodomelaceae) 301
- Halogenated diterpenes of *Laurencia* 310
- Non-halogenated hydroperoxyditerpenes of *Laurencia* 319
- Squalenoids of *Laurencia* species and *Chondria armata* 319
- Cyclic halogenated C₁₅ ethers and polyethers of *Laurencia* and *Chondria* 322
- Bromo- and polybromophenols of Ceramiales 325
- Nitrogen-containing bromophenols of *Rhodomela confervoides* 328
- Other nitrogen-containing derivatives of Ceramiales 329
- Cyclic polysulfides of *Chondria californica* 332
- Arsenic-containing derivative of *Chondria crassicaulis* 332
- Some atypical derivatives of *Laurencia species* 333
- Halogenated derivatives of Nemaliales 333
- Acetylenic acids of *Liagora farinosa* 335
- Sulfated triterpene alcohols of *Tricleocarpa fragilis* 336
- Cyclic peptide from *Galaxaura filamentosa* 337
- Appendix 8 337
- Appendix 9 338
- Selection of documentary resources 338
- References 338
- Websites 352
- Synthesis 353
- 14**
- Phaeophyceae (Brown Algae) 361**
- General introduction; 361
- Classification of Phaeophyceae 361
- Photosynthetic pigments 363
- Laminarans and other storage osides 363
- Matrix polysaccharides: alginic acids and alginates 364
- Fucoidans (sulfated fucans) 365
- Lipids and fatty acids 367
- Oxylipins of Laminariales 367
- Epoxy lipids of *Notheia anomala* (Chordariales) 370
- Sterols 371
- Volatile hydrocarbons and sexual chemotaxy 372
- Background on the secondary metabolites 376
- Sesquiterpenes of Dictyotales 376
- Cyclic diterpenes of Dictyotales 377
- Linear diterpenes of Fucales and other derivatives 382
- Phenols and phlorotannins 385
- Other aromatic derivatives 388
- Meroterpenes: general comments 389
- Prenylated quinones and hydroquinones 389
- Meromonoterpenes of *Sporochnus bolleanus* 390

XII Contents

Merosesquiterpenes of <i>Dictyopteris</i> species	391
Meroditerpenes of the genera <i>Taonia</i> and <i>Styppodium</i>	392
Meroditerpenes of <i>Cystoseira</i> species: chemotaxonomy of Cystoseiraceae	396
Nahocols and isonahocols: rearranged linear meroditerpenes of <i>Sargassum autumnale</i>	401
Derivatives of nitrogen, phosphorus and arsenic	402
Sulfur-containing derivatives	404
Iodinated derivatives	405
Appendix I	406
Appendix II	407
Selection of documentary resources	407
References	407
Websites	417
Synthesis	418
15	
Major Uses of Macroalgae	423
Overview	423
Estimate of resources	423
Edible seaweeds	425
Dietary properties of marine algae	425
Physicochemical aspects of phycocolloids	426
Economic aspects of phycocolloids	428
Major producing countries of phycocolloids	428
Main applications of agars	428
Main applications of carrageenans and furcellarans	430
Main applications of alginic acid and alginates	430
Summary of research in the field of healthcare	431
Antiviral and immunostimulant sulfated polysaccharides of red, brown and green algae	431
Anticoagulant and antithrombotic properties of fucoidans	432
Antitumoural, immunomodulatory and antiviral properties of fucoidans	433
Other examples of biological activities of macroalgae	434

Uses of algae in cosmetics	434
Uses of algae in agriculture and livestock production	435
Selection of documentary resources	435
References	435
Proceedings of the latest International Seaweed Symposia	440
Websites	440

Part 4 Fungi and Other Eukaryotic Unicellular Non-photosynthetic Organisms

16	
Fungi	445
The Fungal Kingdom: the concept of marine fungi	445
Mastigomycetes and Eumycetes (true fungi)	446
Elements of classification of Eumycetes	446
Background information on the structure of chitin	446
Fatty acids	446
Sterols	446
Membrane peptides of fungi: peptaibols	448
General comments on secondary metabolites of marine fungi	449
Substances isolated from fungi collected from the surface of the sea	449
Substances isolated from fungi from sediments and other inert substrates	450
Substances isolated from fungi associated with cyanobacteria	454
Algicolous fungi: general remarks	454
Substances isolated from fungi associated with green algae and marine Spermatophyta	454
Substances isolated from fungi associated with red algae	458
Substances isolated from fungi associated with brown algae	459
Substances isolated from lignicolous fungi	461
Substances isolated from fungi associated with sponges	465

Substances isolated from fungi associated with cnidarians 473

Substances isolated from fungi associated with molluscs 474

Substances isolated from fungi associated with bryozoans 476

Substances isolated from fungi associated with echinoderms 476

Substances isolated from fungi associated with crustaceans 478

Substances isolated from fungi associated with tunicates (ascidians) 478

Substances isolated from fungi associated with fish 480

Websites 501

Synthesis 501

18

Introduction to Marine Biotechnology 503

Introduction 503

Recent developments in the culture of invertebrates 503

Lipids and pigments: examples of nutritional applications 504

New substances and biomaterials: examples of biomedical applications 506

Bioremediation and biofouling: examples of environmental applications 507

Dialkylphthalates in marine organisms 508

Another type of application: bioadhesives 508

Some examples of biotechnology in Prokaryotes 509

Selection of documentary resources 510

General references 510

References 510

Websites 516

Volume 2

Part 5

Porifera, Cnidaria, and Ctenophora

19

Porifera (Sponges) 521

Overview of the universe of sponges 521

Metabolites of *Calcarea* (calcareous sponges) 524

General characteristics of *Calcarea* 524

Fatty acids 524

Sterols 524

Non-nitrogenous derivatives of species of the genus *Leucetta* 525

Imidazole alkaloids and zinc complexes isolated from the genera *Leucetta*, *Leucosolenia* and *Clathrina* 526

α, ω -Bis long-chain aminoalcohols 528

Nitrogen-containing macrolides and cyclic peptides 529

Other nitrogen-containing compounds of *Calcarea* 529

Metabolites of *Hexactinellida* 530

Classification and membrane constituents of *Demospongiae* 531

Classification 531

- Some physical observations on demosponges 532
 Shape and size 532
 Consistency 532
 Colour and odour 532
 Diversity of membrane constituents:
 some examples 536
 Phospholipids and demospongiac acids 538
 Fatty acids with 5,9 dienic structure 541
 Other mono- and polyunsaturated fatty acids 543
 Branched fatty acids 544
 Isoprenic acids 547
 Cyclopropanic acids 548
 Brominated acids 550
 2-O substituted acids 551
 Sulfur derivatives of demospongiac acids 553
 Intracellular localization and biological activity
 of demospongiac acids 555
 Brief reminder about conventional sterols 555
 Unconventional sterols produced by changes
 in the tetracyclic system 556
 Unconventional sterols produced by polymethylation
 of the side chain 561
 Sterols with degraded side chains 564
 Sterols and stanols with cyclopropanic
 and cyclopropenic side chains 564
 Secosterols 566
 Polyhydroxylated steroids and derivatives,
 peroxysterols 569
 Sulfated sterols 571
 Chlorinated sterols and sterones 574
 Nitrogen-containing sterols 576
 Glycolipids 577
- Secondary metabolites of Homoscleromorpha** 582
 Fatty acids, polyketides and oxylipins
 of *Plakinastrella* and *Plakortis* 582
 Cyclic peroxides and peroxy lactones
 of *Plakinastrella* and *Plakortis* 584
 Glycosides 587
 Polyhydroxylated sterols of *Oscarella lobularis* 587
 Alkaloids and other original nitrogen derivatives
 of *Plakortis* and *Corticium* 587
- Secondary metabolites of Astrophorida** 590
 Acetylenic fatty acids of *Stelletta* 591
 Glycolipids: caminosides and pachymosides 591
 Triterpenes of malabaricane and isomalabaricane:
 sesterterpenes 591
 Triterpenic glycosides and steroidal glycosides 593
 Substituted tetramic acids and derived glycosides 596
 Erylusamines, erylusine and erylusidine 598
 Cyclic depsipeptides, peptolides
 and macrolactones 598
 Nitrogen-containing terpenes 602
- Bengazoles and bengamides 603
 Atypical nitrogenous derivatives 605
 Phosphorus-containing derivatives similar
 to calyculin A 607
 Aromatic sulfated derivatives 608
 Isotactic polymethoxydienes of *Myriastrra clavosa* 608
- Secondary metabolites of Hadromerida
 and Chondrosida** 609
 Perforating power of Clionaidae 609
 lyso-Phospholipids and sulfated sphingosines
 of *Spirastrella abata* 610
 Brominated acetylenic derivatives of *Diplastrella* 611
 Cyclic peroxides 612
 Terpenes 613
 Unconventional sterols 614
 Macrolactones: latrunculins and spongistatins 615
 Atypical glycosides of *Latrunculia corticata* 617
 Other nitrogen-free toxins 617
 Peptides and depsipeptides 618
 Pyrrole derivatives and other nitrogen-containing
 heterocycles 619
 Atypical nucleosides 621
- Secondary metabolites of Lithistida** 622
 Particular characteristics of lithistid sponges 622
 Nitrogen-containing sesquiterpenes of *Theonella* 623
 Specific glycolipids of *Theonella swinhoei*,
Discodermia calyx and *D. dissoluta* 623
 Long-chain polyacetylenic derivatives of *Theonella*
 sp. 624
 3 β -Methoxysterols of *Jereicopsis graphidiophora* 624
 4-Methylenesterols and sterones of *Theonella* 624
 Macrolides 626
 Examples of acetogenins: discodermolide,
 calyculins and onnamides 629
 Linear peptides 630
 Mono- and bicyclic peptides 632
 Symbiotic origin of some polypeptides 635
 Cyclic and linear depsipeptides 635
 Atypical nitrogenous derivatives 639
- Secondary metabolites of Spirophorida** 640
 Atypical sterols of *Cinachyra*, *Microscleroderma*,
 and *Scleritoderma* 640
 Cinachyrolide A 640
 Microsclerodermins and aciculitins 641
 Examples of atypical derivatives of some sponges
 of the Tetillidae 641
- Secondary metabolites of Agelasida** 642
 Sterols 642
 Diterpenes and carotenoids 642
 Merosesquiterpenes and nitrogen-containing
 meroditerpenes 643

- Galactosylceramides and glycolipids 644
- Oroidin and related C₁₁N₅ bromopyrrole alkaloids 646
- Agelastatin A series 649
- Other series 650
- Pyrrole-2-carboxylic acid derivatives 650
- Other examples of nitrogen-containing heterocycles 650
- Betaines 651
- Secondary metabolites of Halichondrida 652**
- A-*nor*-steroids and other non-conventional sterols 652
- Conventional terpenes 654
- Nitrogen-containing terpenes: isonitriles and related derivatives 659
- Other terpenes 666
- Long-chain linear polyamines and *α,ω*-bis-isothiocyanates 668
- Polyethers: halichondrins, okadaic and glycookadaic acids 668
- Various lipids 670
- Linear peptides of the genera *Auletta* and *Cymbastela* 672
- Depsipeptides and cyclic peptides 672
- Pyrrole, imidazole, pyridine, isoquinoline and indole derivatives 678
- Pyrrole derivatives 678
- Imidazole derivatives 678
- Pyridine and isoquinoline derivatives 679
- Indole derivatives 679
- Heterocycles related to the oroidin family 681
- Atypical halogenated and sulfur-containing derivatives 682
- Secondary metabolites of Haplosclerida 683**
- Acetylenic derivatives 685
- Atypical fatty acids 691
- Terpenes and meroterpenes 693
- Triterpenic glycosides 699
- Hopanoids, steroids and sterosides 701
- Macrolides, depsipeptides and cyclic peptides 704
- Amino alcohols and glycosphingolipids (cerebrosides) 705
- Manzamines and related derivatives 707
- Quinolizidine and 1-oxaquinolizidine derivatives 707
- Pyridine derivatives and 3-alkylpyridinium salts 714
- Pyridoacridine alkaloids 716
- Pyrroloquinones and other examples of nitrogen-containing heterocycles 717
- Quinones and sulfated hydroquinones 721
- Very long-chain linear sulfated derivatives 722
- Thiocyanatins: *α,ω*-dithiocyanates of *Oceanapia* sp. 722
- Some information on freshwater haplosclerid sponges 723
- Secondary metabolites of Poecilosclerida 724**
- Sterols, steroids and sterosides 725
- Terpenes and triterpenic glycosides 727
- Polybrominated acetogenins and oxylipins 732
- Long-chain acetylenic derivatives: raspailynes 732
- Glycolipids 733
- Brominated aromatic derivatives of *Hamigera tarangaensis* 733
- Macrolides 734
- Chondropsins: cyclic depsipeptides of *Chondropsis* sp. 736
- Eurypamides (*Microcionia eurypa*), microcionamides (*Clathria abietina*) and other cyclic peptides 737
- Linear amides 738
- Examples of some atypical sulfur-containing derivatives 739
- Pyrrole and indole derivatives 741
- Pyridines, quinolizines and pyridoacridines 742
- Guanidine derivatives 743
- Pyrroloiminoquinones and pyrroloquinones 747
- Azasugars 748
- Other examples of polycyclic alkaloids 748
- Phosphorus and arsenic-containing derivatives, betaines 750
- General information on the metabolites of sponges lacking mineral spicules 751**
- Secondary metabolites of Dendroceratida 753**
- Terpenes and meroterpenes 754
- Sterols 760
- Polybromophenols and polybromodiphenyl ethers of *Dysidea* 761
- Nitrogen compounds 763
- Secondary metabolites of Dictyoceratida 768**
- Terpenes and meroterpenes 768
- Sterols 788
- Glycolipids 789
- Polybromodiphenyl ethers and other halogenated aromatic derivatives 789
- Macrolides: laulimalide, altohyrtins, chondropsins and haterumalides 790
- Linear and cyclic peptides, depsipeptides 791
- Alkaloids and other nitrogen-containing compounds 793
- Phosphorus derivatives 795
- Atypical sulfur derivatives 796
- Secondary metabolites of Verongida 796**
- 3,5-Dibromotyrosine derivatives 797
- Other nitrogen-containing compounds 805
- Glycerol ethers and glycosphingolipids 807
- Sulfated aromatic compounds 807
- Metabolites specific to the family Ianthellidae 808

sesquiterpenes 959

Sesquiterpenes with original carbon skeletons 962

Examples of sesquiterpenes
with a classical carbon skeleton 968

General account of diterpenes 974

Linear and monocyclic diterpenes 975

General information on bicyclic diterpenes 991

Chlorinated diterpenes 995

Other examples of briarane derivatives 996

Nitrogen-containing diterpenes of cladiellane/
eunicellane: eleutherobin and analogues,
labiatamides 999

Other examples of cladiellane/eunicellane
diterpenes 1004

Diterpenes of serrulatane and other bicyclic carbon
skeletons 1005

Bicyclic C₅/C₁₁ diterpenes 1005

Bicyclic diterpenes containing a cyclopropane 1006

Some other examples of bicyclic diterpenes 1011

General account of tricyclic diterpenes 1014

Pseudopterins, other amphilectane derivatives
and analogues 1014

Other examples of tricyclic and tetracyclic
diterpenes 1019

Comments on the origin of terpenes 1023

Non-terpenic nitrogenous derivatives
of Octocorallia 1023

**Membrane constituents and secondary metabolites
of Hexacorallia (Anthozoa)** 1027

Fatty acids, oxylipins and acetylenic derivatives 1027

Sterols and ecdysteroids 1029

Terpenes 1031

Carotenoids of sea anemones 1033

Aromatic derivatives 1033

Ceramides 1033

Examples of nitrogenous pigments:
zoanthoxanthins and calliactin 1034

Palytoxins 1034

Mycosporines 1036

Betaines, phosphobetaines, purines
and other nitrogen-containing derivatives 1037

Zoanthamine alkaloids 1039

Cytolysins, neuropeptides and other venoms
of sea anemones 1042

Venoms and other metabolites of Medusozoa 1042

Some data on the Cubozoa and other jellyfish 1043

Bioluminescence of jellyfish and other Cnidaria 1044

Some results on the secondary metabolites
of other Hydrozoa 1045

Ctenophora 1049

Echinoderms 1283

General remarks and classification 1283

General comments on the chemistry of echinoderms 1284

Metabolites of crinoids

- (feather stars and sea lilies) 1287
- Quinonic pigments 1287
- Sterols, glycolipids and phosphoceramides 1288
- 3,5-Dibromotyrosine derivatives 1289

Metabolites of echinids (sea urchins) 1290

- Echinochrome A, spinochromes and carotenoids 1290
- Fatty acids, prostaglandins, glycosphingolipids and other lipids 1292
- Nitrogen- and sulfur-containing metabolites 1296
- Sulfated fucans and galactans 1297

Metabolites of ophiuroids

- (brittle stars and basket stars) 1297
- Lipids 1298
- Sulfated carotenoids 1299
- Sterols and sulfated sterols 1300
- Alkaloids 1301

Metabolites of asteroids (sea stars and starfish) 1304

- Sterols and sulfated sterols 1304
- Free and sulfated polyhydroxysterols 1309
- Nitrogen- and phosphorus-containing polyhydroxysterols 1313
- Steroidal glycosides and asterosaponins 1313
- Carotenoids 1328
- Fatty acids and oxylipins 1328
- Glycolipids, ceramides, cerebroside and gangliosides 1329
- Nitrogen-containing derivatives 1329

- Metabolites of holothuroids (sea cucumbers)** 1335
 Fatty acids 1336
 Sterols, 4 α -methylsterols and triterpenes 1336
 Holothurins 1336
 Carotenoids 1347
 Trepang 1348
 Cerebrosides and gangliosides 1348
 Atypical nitrogen-containing derivatives
 of *Cucumaria frondosa* 1351
 Oligosaccharides and sulfated polysaccharides 1352
- Selection of documentary resources** 1352
 References 1353
 Websites 1366
 Synthesis 1367
- 27**
- Worm-like Organisms: 2. Chaetognatha and Hemichordata (Enteropneusta and Pterobranchia)** 1369
- Short description of Chaetognatha 1369
 Short description of Hemichordata 1369
- Aromatic and heteroaromatic derivatives
 of enteropneusts 1370
- Cephalostatins of *Cephalodiscus gilchristi*
 (Pterobranchia) 1372

- Ascidians (Tunicates)** 1377
- Reminder about the concept of the chordate 1377
- Description of tunicates and classification
 of the Ascidiacea 1377
- General information on the chemistry
 of ascidians 1379
- Lipids: fatty acids, acyltuniclorins, polyketides
 and oxylipins 1380
- Amino alcohols, sphinganines, serinolipids,
 ceramides and cerebrosides 1382
- Sterols and steroids 1384
- Carotenoids 1386
- Sulfated polysaccharides of ascidian tunics 1386
- Nitrogenous biopolymers and lectins** 1387
- Metabolites of Didemnidae** 1388
 Didemnaketals and chlorinated diterpenes
 of *Lissoclinum* species 1388
 Aromatic polysulfanes and other atypical
 sulfur derivatives 1390
 Lamellarins and other pyrrole alkaloids 1392
 Derivatives of quinoline, pyridoacridine
 and pyrroloacridine 1394
 Derivatives of tyramine, tryptophan, indole
 and β -carboline 1396
 Cytotoxic linear amides: bistratene A
 and bistramides 1400
 Linear peptides and 1,4-diketopiperazines 1401
 Cyclic peptides 1402
 Macrolides: patellazoles 1408
 Cyclic depsipeptides: didemmins, Aplidin[®] (plitidepsin)
 and other derivatives 1409
 Purines, nucleosides and analogues 1413
- Metabolites of Polycitoridae** 1414
 Terpenes of *Cystodytes* sp.
 and Polycitor adriaticus 1414
 Aromatic polysulfanes of *Polycitor adriaticus* 1414
 Nitrogenous macrolides: iejimalides 1415
 Simple pyrrole and indole alkaloids 1415
 β -Carboline alkaloids: eudistomins
 and related derivatives 1416
 Decahydroquinoline alkaloids: lepadins 1418
 Quinolizidine and indolizine alkaloids 1420
 Perhydropyrrolo[2,1-*j*] and perhydropyrido[2,1-*j*]
 quinoline alkaloids: cylindricalines 1420
 Pyridoacridine alkaloids and related derivatives 1421
 Other types of alkaloids 1424
 Cyclic peptides 1426
- Metabolites of Polyclinidae** 1426
 Long-chain sulfated alkanes and terpenes
 of *Sidnyum turbinatum* 1427
 Terpenes and meroterpenes 1427
 Para- and metacyclophanes: longithorones
 and related derivatives 1427
 Simple aromatic derivatives 1430
 Nitrogenous and non-nitrogenous macrolides 1430
 Long-chain amines and amino alcohols,
 sphingosines 1432
 Piperidine alkaloids: pseudodistomins 1433
 Indole and β -carboline alkaloids 1434
 Quinoline and pyridoacridine alkaloids 1436
 Bis-steroidal alkaloids of *Ritterella tokioka*:
 ritterazines 1436
 Purines and nucleosides 1437

Miscellaneous nitrogenous derivatives 1439

Metabolites of Ascidiidae 1441

Vanadium, intracellular acidity of blood cells
and peptide ligands 1441

Metabolites of Cionidae 1445

Metabolites of Diazonidae 1446

Metabolites of Perophoridae 1447

Metabolites isolated from species
of the genus *Perophora* 1447
Tetrahydroisoquinoline alkaloids: ecteinascidins 1447

Metabolites of Molgulidae and Pyuridae 1449

Lipids and non-nitrogenous derivatives 1449
Nitrogenous derivatives, antimicrobial peptides
and proteins 1450

Metabolites of Styelidae 1453

Non-nitrogenous derivatives 1453
Phenylethylamine derivatives, various alkaloids 1453
Antibacterial purines and peptides 1456

Selection of documentary resources 1456
