Foreword to the Russian Edition	V
Foreword to the English Edition	VIII
Editor's Preface	XIII
Introduction	1

Part I The Statics of Critical Phenomena 7

1 Statics of Critical Phenomena in the Nearest Vicinity of the Critical Point: Experimental Manifestation	9
1.1 Short History of Critical Phenomena Research	9
1.2 Peculiarities of the Experiment in the Nearest Vicinity of the Critical Point	17
1.2.1 "Experimental" Critical Indices	17
1.2.2 Determination of Critical Parameters	19
1.2.3 Purity of Matter	20
1.2.4 Determination of Critical Density	21
1.2.5 Determination of Critical Temperature and Pressure	23
1.3 Experiments Near the Critical Point in the Presence of the Gravitational Field	24
1.3.1 The Gravitational Effect	25
1.3.2 The Coexistence Curve	26
1.3.3 Singularity of the Diameter of the Coexistence Curve	32
1.3.4 The Critical Isotherm	34
1.3.5 Isothermal Compressibility Along the Critical Isochore	38
1.3.6 $(p - T)$ -Dependence Along the Critical Isochore	42
2 Critical Indices and Amplitudes	45
2.1 Phenomenological Model of the Critical Behavior of Nonideal Systems	45
2.2 Critical Indices: External Field Effects	48
2.2.1 Critical Index β	48
2.2.1.1 The Gravitational Effect	49

x | Contents

2.2.1.2	The Influence of Surface Forces	50
2.2.1.3	The Influence of Fields: Comparison with Magnetic Materials	51
2.2.1.4	Comparison with Metals	53
2.2.2	Critical Index δ	55
2.2.2.1	The Influence of Gravitation	55
2.2.2.2	The Influence of Coulomb Forces	56
2.2.3	Critical Index γ	57
2.2.3.1	The Influence of Gravitation	57
2.2.4	Critical Index α	61
2.2.4.1	The Influence of Gravitation	61
2.2.5	Critical Index of the Correlation Radius ν	63
2.2.6	Micellar Systems	65
2.2.7	Influence of Boundaries: Finite-Size Effects	66
2.2.8	Results and Consequences	67
2.2.9	Some Unresolved Problems	69
2.3	Critical Indices and Amplitudes	76
2.3.1	Universal Relations Between Critical Indices	76
2.3.2	Universal Relations Between Critical Amplitudes	80
2.3.3	Correlation Between Critical Index and Critical Amplitude Values	82
3	Thermodynamics of the Metastable State	89
3.1	The “Pseudospinodal” Hypothesis	89
3.1.1	The History of the Occurrence of the “Pseudospinodal Hypthesis”	89
3.1.2	The Universal “Pseudospinodal”	90
3.2	The van der Waals Spinodal	91
3.2.1	First-Order Stability Conditions	92
3.2.2	Higher Order Stability Conditions	93
3.2.3	Approaching the Instability Points	94
3.2.4	The Instability Area	95
3.3	Thermodynamic Analysis of the “Pseudospinodal” Hypothesis	96
3.3.1	Physics and Geometry	96
3.3.2	Mathematical Foundation	97
3.3.3	Thermodynamic Consequences	98
3.4	Experimental Test of the “Pseudospinodal” Hypothesis	100
Part II	The Dynamics of Critical Phenomena	103
4	Foundations of Critical Dynamics	105
4.1	Introduction	105
4.2	Critical Fluctuations: Light Scattering Intensity	107
4.3	Kinetics of Critical Fluctuations: Light Scattering Spectrum	111

4.4	Dynamic Critical Indices and Universal Amplitude	115
4.5	Scattering of Higher Orders	118
5	Critical Opalescence: Modeling	121
5.1	Introduction	121
5.2	Techniques and Experimental Methods	122
5.2.1	Experimental Setup	123
5.2.1.1	General Characteristics	123
5.2.1.2	The Optical System	124
5.2.1.3	Correlator	125
5.2.1.4	Time Correlation Function for High Scattering Multiplicities	126
5.2.1.5	Cumulants of the Correlation Function	127
5.2.1.6	Afterpulses	130
5.3	Physical Modeling	132
5.3.1	Model Systems	132
5.3.2	Dependence of the Spectrum Half-width of Multiple Scattering on the Physical Characteristics of the System and on the Scattering Multiplicity	133
5.3.2.1	Dependence on the Viscosity of the Fluid	133
5.3.2.2	Dependence on the Optical Thickness of the Scattering Medium	136
5.3.2.3	Angular Dependence	136
5.3.2.4	Dependence on the Polarization Mode	138
5.3.2.5	Dependence on the Concentration of the Scatterer	140
5.3.2.6	Dependence on the Dimensions of the Scattering Media	144
5.4	Mathematical Modeling	146
5.4.1	The Simplest Diffusion Model Approach	147
5.4.1.1	The First Approach	147
5.4.1.2	The Second Approach	148
5.4.2	Mathematical Model of Multiple Scattering	153
5.4.2.1	Basic Concepts of Radiation-Transport Theory	153
5.4.2.2	Multiple Scattering Spectra Determined via the Radiation-Transport Theory	154
5.4.2.3	Transition to High Multiplicity Scattering	156
5.4.2.4	Effect of the Shape of the Sample on the Mean Scattering Multiplicity	159
5.5	On the Nature of the Constant Γ_0	162
5.5.1	The Relation of Γ_0 to the Size of the Scatterers	162
5.5.2	The Relation of Γ_0 to the Depth of the Diffusion Source	163
6	Critical Opalescence: Theory and Experiment	165
6.1	Introduction	165
6.2	Theory of Critical Opalescence Spectra	166
6.2.1	Analysis of the Behavior of Γ_m Close to the Critical Point	166

XII | Contents

6.2.1.1	Calculation of the Limiting Values of Key Quantities	169
6.2.1.2	Calculation of the Temperature Dependence	172
6.2.1.3	Analysis of the Obtained Results	173
6.3	Experiments Close to the Mixing Critical Point	177
6.3.1	Experimental Setup	177
6.3.2	Choice of the Object of Research	180
6.3.3	Binary Mixture Aniline–Cyclohexane	180
6.3.4	Experimental Results	183
6.4	Heating of the “Critical” Medium by Probe Radiation	184
7	Thermal Conductivity in the Vicinity of the Critical Point	191
7.1	Introduction	191
7.2	Thermal Conductivity of NH ₃ Near to the Critical Point	194
7.2.1	Experimental Setup for Determining Thermal Conductivity	195
7.2.2	Experimental Results: Background Thermal Conductivity	198
7.2.3	Extended Mode-Coupling (EMC) Theory	201
7.3	Static Light Scattering: The Extinction Coefficient	204
7.3.1	The Experimental Setup for Light Scattering	205
7.3.2	Results and Analysis of the Optical Experiment	206
7.3.3	Density Derivative of the Dielectric Constant	207
7.4	Determination of ν and ξ_0 Using Light Scattering	208
7.5	Critical Dynamics: Comparison of Theory and Experiment	212
7.5.1	Universal Dynamic Amplitude R	213
7.5.2	Thermal Conductivity Critical Index, φ	213
7.5.3	Checking the Feasibility of the Universal Relations Between the Critical Amplitudes for Ammonia	214
7.5.4	Thermal Conductivity of Ammonia in the Wide Neighborhood of the Critical Point	215
7.6	Conclusion	216
A	Some Applications of the Photon Correlation Technique	219
A.1	Diffusing-Wave Spectroscopy	219
A.2	Method of Determination of the Mean Dimension and Concentration of Suspended Particles	221
A.3	Monitoring of Particle Motion in Drying Films	224
A.4	Dynamics of Particle Formation and Growth	225
A.4.1	Supercritical Fluids	225
A.4.2	Opaque Systems	226
A.4.3	Sol–Gel Process	226
	References	229
	Index	249
