Volume I

1	An Introduction to Cosmology	1
1.1	Unity of Physical Laws	1
1.2	The Cosmological Hypothesis	4
1.3	Thermal Radiation in an Expanding Universe	6
1.4	The Discovery and Properties of CMB	10
1.5	Thermodynamic Equations for Matter	18
1.6	Universe in Transition	20
1.7	The Role of Gravity	24
1.8	The Friedmann–Lemaître Equations ($\Lambda = 0$)	27
1.9	Cartan’s Formulation of Newtonian Gravity	31
1.9.1	* Newtonian Cosmology	34
1.10	Thermal History of the Early Universe	35
1.10.1	Particle Distribution Functions	38
1.10.2	Neutrino Decoupling and the Radiation Era	42
1.11	Primordial Nucleosynthesis	47
1.11.1	Neutron-to-proton Ratio in an Expanding Universe	53
1.11.2	Element Synthesis in the Early Universe	59
1.11.3	Measurements of Primordial Abundances	63
1.12	Decoupling of Matter and Radiation	69
1.13	The First Stars and the Re-ionization Epoch	77
1.14	Gravitational Instability in the Friedmann–Lemaître Model	82
1.15	Acoustic (Sound) Horizon at Recombination	93
1.16	Dark Matter and Structure Formation	96
1.16.1	Nature and Properties of Dark Matter	102
1.16.2	Structure Formation in Models with Cold Dark Matter	103
1.17	Statistics of Density Fluctuations	106
1.17.1	Galaxy Redshift Surveys	115
1.17.2	Biasing, Nonlinear Evolution and Peculiar Motions	118
1.18	Temperature Anisotropies in the CMB	127

1.18.1	Primary Anisotropies	127
1.18.2	Secondary Anisotropies	131
1.19	Multipole Analysis of the Cosmic Microwave Background	135
1.19.1	The CMB Dipole Component	139
1.19.2	Cosmological Parameters from CMB Anisotropies	142
1.20	* CMB Observational Techniques	146
1.20.1	Microwave Telescopes	150
1.20.2	Interferometry	154
1.21	Galaxies and Clusters	159
1.21.1	Our Galaxy, the Milky Way	160
1.21.2	The Local Universe	165
1.21.3	Classification of Galaxies	168
1.21.4	Active Galactic Nuclei	171
1.21.5	* Accretion in Galactic Nuclei	177
1.21.6	The Origin and Morphological Evolution of Galaxies	187
1.22	A Brief History of the Universe	192
1.23	The Ultimate Fate of the Universe	196
	Bibliography	199
2	Special and General Relativity	203
2.1	Précis of Special Relativity	203
2.1.1	The First and Second Postulates of SRT	203
2.1.2	Relativistic Kinematics	208
2.1.3	Mass, Momentum and Energy	217
2.1.4	The Doppler Effect	221
2.1.5	Stellar Aberration and the Penrose–Terrell Effect	223
2.1.6	The Speed of Light in a Moving Medium	228
2.1.7	Accelerations and Forces in Special Relativity	230
2.1.8	Thomas Precession and the Anomalous Magnetic Moment	233
2.1.9	The Metric Tensor	238
2.2	The Equivalence Principle and Spacetime Curvature	247
2.2.1	The Gravitational Redshift	249
2.2.2	The Gravitational Time Dilation	251
2.2.3	The Bending of Light	253
2.3	Geodesics	254
2.4	A Metric with Spherical Symmetry	255
2.4.1	Kepler’s Third Law	259
2.4.2	Time Intervals in Curved Spacetime	260
2.4.3	The Gravitational Redshift Revisited	261
2.5	Hamilton’s Principle and Euler–Lagrange Equations	264
2.6	Action Integral in Flat and Curved Spacetimes	271
2.7	The Geodesic Equation	274

2.8	The Metric Tensor and Christoffel Symbols	278
2.9	Locally Inertial Frames (LIF)	279
2.10	The Equation of Geodesic Deviation	284
2.11	Tensors and Tensor Densities	287
2.12	Covariant Differentiation of Tensors	295
2.13	Parallel Transport and Geodesics	301
2.14	Electrodynamics in Curved Spacetime	305
2.15	Riemann and Ricci Tensors	307
2.16	Bianchi Identities	312
2.17	Einstein's Law of Gravitation	315
2.18	The Energy–Momentum Tensor	321
2.19	Einstein's Equations from a Variational Principle	324
2.20	Spacetime as a Differentiable Manifold	329
2.20.1	Curved Manifolds, Tangent Vectors and One-forms	331
2.20.2	Tensors as Multilinear Maps	337
2.20.3	Metric as a Mapping of Vectors into One-forms	338
2.20.4	Isomorphism of Vectors and One-forms	341
2.21	* Differential Forms and Electromagnetism	342
2.21.1	The Hodge Star Operator	346
2.21.2	The Exterior Derivative	349
2.21.3	Maxwell's Equations and Gauge Invariance	351
2.21.4	The Co-derivative Operator	354
2.21.5	Generalized Stokes' Theorem	355
2.21.6	Maxwell's Equations from a Variational Principle	357
2.21.7	The Inner (Scalar) Product	358
2.21.8	Some Useful Formulae	359
2.22	* Curvature Forms on Differentiable Manifolds	361
2.22.1	The Lie Derivative	361
2.22.2	The Koszul Connection	365
2.22.3	Curvature and Torsion	369
2.22.4	Geodesics and Geodesic Deviation	372
2.22.5	Ricci and Bianchi Identities	373
2.22.6	General (Anholonomic) Bases	375
2.22.7	Cartan's Structural Equations	377
2.22.8	The Schwarzschild Metric in an Orthonormal Basis	379
	Bibliography	382
3	The Friedmann–Lemaître Universe	385
3.1	The Robertson–Walker Metric	385
3.2	The Friedmann–Lemaître Universe ($\Lambda = 0$)	395
3.3	Acceleration of Cosmic Expansion	398
3.4	Derivation of the Friedmann–Lemaître Equations	402

3.4.1	* Curvature Two-form for the Robertson–Walker Metric	407
3.5	General Dynamics of the Expansion ($\Lambda \neq 0$)	409
3.6	Distances in a Homogeneous Universe	412
3.7	Some Basic Concepts in Photometry	413
3.8	The Extragalactic Distance Scale	419
3.8.1	Trigonometric Parallax	421
3.8.2	Main-sequence Fitting	424
3.8.3	Cepheid Variable Stars	425
3.8.4	Type Ia Supernovae (SNe Ia)	427
3.8.5	Surface-brightness Fluctuations (SBFs)	428
3.8.6	The Tully–Fisher Relation (TFR) for Spirals	430
3.8.7	The Fundamental Plane for Ellipticals	432
3.8.8	Type II Supernovae (SNe II)	434
3.8.9	Water Masers as Absolute Distance Indicators	435
3.8.10	The Thermal Sunyaev–Zeldovich Effect	436
3.8.11	The HST Key Project to Measure H_0	437
3.9	High-redshift Supernovae Ia	438
3.10	Gravitational Lensing	443
3.10.1	The Lens Equation and the Einstein Radius	449
3.10.2	Galactic Microlensing	452
3.10.3	The Lens Equation in Cosmology	458
3.10.4	Convergence, Shear and Critical Curves	463
3.10.5	Cosmic Shear as a Probe of Large-scale Structure	468
3.10.6	Light Propagation in an Inhomogeneous Universe	471
3.11	CMB Polarization Anisotropies	478
3.11.1	Stokes Parameters	481
3.11.2	Statistics of Polarization Anisotropies	485
3.12	* Relativistic Theory of Cosmological Fluctuations	489
3.12.1	Scalar Perturbations and Gauge Transformation	491
3.12.2	The Einstein Equations for Scalar Perturbations	495
3.12.3	Adiabatic Scalar Perturbations	499
3.12.4	The Boltzmann Equation for Photons	504
3.12.5	Acoustic Dynamics	509
3.13	* Inflationary Cosmology	514
	Bibliography	521

Volume II

4	Stellar Structure and Evolution	539
4.1	Stars and Star Clusters	539
4.1.1	General Properties of Main-sequence Stars	539
4.1.2	Stellar Atmospheres and Spectra	549
4.1.3	The Hertzsprung–Russell Diagram	552
4.1.4	Star Clusters	554
4.2	Thermonuclear Fusion in Stars	557
4.2.1	The Physics of Nuclear Fusion	559
4.2.2	Cross-section and Reaction Rate	562
4.2.3	Barrier Penetration	565
4.2.4	Thermonuclear Fusion Rates	567
4.2.5	Hydrogen Burning	570
4.2.6	Solar Neutrinos	576
4.2.7	Helium Burning	587
4.2.8	Advanced Burning Stages	591
4.2.9	Neutrino Emission by Hot Stars	595
4.3	Heat Transfer in Stars	597
4.3.1	Heat Transfer by Random Motion	597
4.3.2	Sources of Radiative Opacity	601
4.3.3	Heat Transfer by Convection	603
4.4	Stellar Structure	606
4.4.1	The Clayton Model	606
4.4.2	The Polytropic Model	610
4.4.3	White Dwarfs	616
4.4.4	Cooling of White Dwarfs	621
4.5	Stellar Evolution Beyond the Main Sequence	624
4.5.1	Evolution of $1M_{\odot}$ Stars	625
4.5.2	Evolution of $5M_{\odot}$ Stars	628
4.5.3	Evolution of $25M_{\odot}$ Stars	631
4.5.4	Core Collapse and Supernova Explosion	633
4.5.5	Supernova 1987A	638
4.5.6	Neutron Stars	643
	Bibliography	653
5	Astrophysical Implications of General Relativity	655
5.1	Experimental Tests of General Relativity	655
5.2	The Schwarzschild Metric	661
5.2.1	Birkhoff's Theorem	665
5.2.2	The Schwarzschild Solution	666
5.3	Perihelion Advance	667

5.4	Deflection of Light in Weak Fields	673
5.5	Radar Echo Delay	675
5.6	The Eötvös Experiment	677
5.7	Spin Precession in a Gravitational Field	681
5.7.1	*Fermi–Walker Transport	684
5.7.2	*Geodetic Precession	685
5.8	Field Equations for Stellar Structure	689
5.8.1	Buchdahl’s Theorem	692
5.9	Black Holes and Gravitational Collapse	694
5.9.1	Evolution of the Black Hole Idea	694
5.9.2	Schwarzschild Black Holes	696
5.9.3	Eddington–Finkelstein Coordinates	699
5.9.4	Gravitational Collapse	702
5.9.5	Geodesic Motion and Black Hole Accretion	703
5.9.6	Rotating (Kerr) Black Holes	706
5.9.7	Kerr Horizons and Ergosphere	709
5.9.8	Dragging of Inertial Frames	711
5.9.9	Thermodynamics of Black Holes	714
5.9.10	Hawking Radiation	718
5.9.11	Observational Evidence for Black Holes	720
5.9.12	Cygnus X-1	724
5.9.13	Supermassive Black Holes in Galactic Nuclei	727
5.10	Gravitational Radiation	731
5.10.1	The Linearized Theory of Gravity	735
5.10.2	Gauge Freedom in General Relativity	740
5.10.3	Plane-wave Solutions	742
5.10.4	The Effect of Gravitational Waves on Free Particles	747
5.10.5	The Energy–Momentum Pseudotensor	751
5.10.6	Emission of Gravitational Radiation	756
5.10.7	Radiation from a Binary Star System	762
5.10.8	The Binary Pulsar PSR 1913+16	769
5.10.9	Gravitational Waves from Collisions	779
5.10.10	Gravitational Waves from Spinning Masses	782
5.10.11	Sources and Detectors of Gravitational Waves	784
5.11	The Post-Newtonian Approximation	800
5.11.1	Field Equations in the PN Approximation	801
5.11.2	Gauge Conditions and Conservation Laws	809
5.11.3	Particles and Photons in a Post-Newtonian Field	810
5.11.4	Asymptotic Fields	812
5.11.5	Gravitomagnetism	815
5.11.6	* Orbiting Gyroscope in the PN Approximation	819
5.11.7	The Geodetic and Lense–Thirring Effects	822

5.12	* Symmetries (Isometries) of a Metric	825
5.12.1	Killing Vectors and the Lie Derivative	826
5.12.2	Stationary and Static Metrics	832
5.12.3	Maximally Symmetric Spaces	835
5.12.4	Gaussian Curvature and Theorema Egregium	839
5.13	* The Weyl Conformal Tensor	842
	Bibliography	846

4.1.1	General Properties of Main-sequence Stars	539
4.1.2	Stellar Atmospheres and Spectra	549
4.1.3	The Hertzsprung–Russell Diagram	552
4.1.4	Star Clusters	554
4.2	Thermonuclear Fusion in Stars	557
4.2.1	The Physics of Nuclear Fusion	559
4.2.2	Cross-section and Reaction Rate	562
4.2.3	Barrier Penetration	565
4.2.4	Thermonuclear Fusion Rates	567
4.2.5	Hydrogen Burning	570
4.2.6	Solar Neutrinos	576
4.2.7	Helium Burning	587
4.2.8	Advanced Burning Stages	591
4.2.9	Neutrino Emission by Hot Stars	595
4.3	Heat Transfer in Stars	597
4.3.1	Heat Transfer by Random Motion	597
4.3.2	Sources of Radiative Opacity	601
4.3.3	Heat Transfer by Convection	603
4.4	Stellar Structure	606
4.4.1	The Clayton Model	606
4.4.2	The Polytropic Model	610
4.4.3	White Dwarfs	616
4.4.4	Cooling of White Dwarfs	621
4.5	Stellar Evolution Beyond the Main Sequence	624
4.5.1	Evolution of $1M_{\odot}$ Stars	625
4.5.2	Evolution of $5M_{\odot}$ Stars	628
4.5.3	Evolution of $25M_{\odot}$ Stars	631
4.5.4	Core Collapse and Supernova Explosion	633
4.5.5	Supernova 1987A	638
4.5.6	Neutron Stars	643
	Bibliography	653
5	Astrophysical Implications of General Relativity	655
5.1	Experimental Tests of General Relativity	655
5.2	The Schwarzschild Metric	661
5.2.1	Birkhoff's Theorem	665
5.2.2	The Schwarzschild Solution	666
5.3	Perihelion Advance	667

5.4	Deflection of Light in Weak Fields	673
5.5	Radar Echo Delay	675
5.6	The Eötvös Experiment	677
5.7	Spin Precession in a Gravitational Field	681
5.7.1	*Fermi–Walker Transport	684
5.7.2	*Geodetic Precession	685
5.8	Field Equations for Stellar Structure	689
5.8.1	Buchdahl’s Theorem	692
5.9	Black Holes and Gravitational Collapse	694
5.9.1	Evolution of the Black Hole Idea	694
5.9.2	Schwarzschild Black Holes	696
5.9.3	Eddington–Finkelstein Coordinates	699
5.9.4	Gravitational Collapse	702
5.9.5	Geodesic Motion and Black Hole Accretion	703
5.9.6	Rotating (Kerr) Black Holes	706
5.9.7	Kerr Horizons and Ergosphere	709
5.9.8	Dragging of Inertial Frames	711
5.9.9	Thermodynamics of Black Holes	714
5.9.10	Hawking Radiation	718
5.9.11	Observational Evidence for Black Holes	720
5.9.12	Cygnus X-1	724
5.9.13	Supermassive Black Holes in Galactic Nuclei	727
5.10	Gravitational Radiation	731
5.10.1	The Linearized Theory of Gravity	735
5.10.2	Gauge Freedom in General Relativity	740
5.10.3	Plane-wave Solutions	742
5.10.4	The Effect of Gravitational Waves on Free Particles	747
5.10.5	The Energy–Momentum Pseudotensor	751
5.10.6	Emission of Gravitational Radiation	756
5.10.7	Radiation from a Binary Star System	762
5.10.8	The Binary Pulsar PSR 1913+16	769
5.10.9	Gravitational Waves from Collisions	779
5.10.10	Gravitational Waves from Spinning Masses	782
5.10.11	Sources and Detectors of Gravitational Waves	784
5.11	The Post-Newtonian Approximation	800
5.11.1	Field Equations in the PN Approximation	801
5.11.2	Gauge Conditions and Conservation Laws	809
5.11.3	Particles and Photons in a Post-Newtonian Field	810
5.11.4	Asymptotic Fields	812
5.11.5	Gravitomagnetism	815
5.11.6	* Orbiting Gyroscope in the PN Approximation	819
5.11.7	The Geodetic and Lense–Thirring Effects	822

5.12	* Symmetries (Isometries) of a Metric	825
5.12.1	Killing Vectors and the Lie Derivative	826
5.12.2	Stationary and Static Metrics	832
5.12.3	Maximally Symmetric Spaces	835
5.12.4	Gaussian Curvature and Theorema Egregium	839
5.13	* The Weyl Conformal Tensor	842
