

Contents

- Preface to the Second Edition** VII
- Preface to the First Edition** IX
- Source of Information** XI
- A** From Abbe's principle to Azbel'–Kaner cyclotron resonance 1
- B** From B92 protocol to Burstein–Moss shift 27
- C** From cage compound to cyclotron resonance 53
- D** From D'Alembert equation to Dzyaloshinskii–Moriya interaction 81
- E** From (e,2e) reaction to Eyring equation 109
- F** From Fabry–Pérot resonator to FWHM (full width at half maximum) 133
- G** From gain-guided lasers to gyromagnetic frequency 159
- H** From habit plane to hyperelastic scattering 175
- I** From ideality factor to isotropy (of matter) 199
- J** From Jahn–Teller effect to Joule's law of electric heating 207
- K** From Kane model to Kuhn–Thomas–Reiche sum rule 211
- L** From lab-on-a-chip to Lyman series 225
- M** From Mach–Zender interferometer to Murrell–Mottram potential 251
- N** From NAA (neutron activation analysis) to Nyquist–Shannon sampling theorem 285
- O** From octet rule to oxide 299
- P** From PALM (photoactivable localization microscopy) to pyrrole 307

Contents

- Q** From *Q*-control to qubit 341
- R** From Rabi flopping to Rydberg gas 363
- S** From Saha equation to synergetics 381
- T** From Talbot's law to type II superconductors 443
- U** From ultraviolet photoelectron spectroscopy (UPS) to Urbach rule 461
- V** From vacancy to von Neumann machine 465
- W** From Waidner–Burgess standard to Wyckoff notation 473
- X** From XMCD (X-ray magnetic circular dichroism) to XRD (X-ray diffraction) 483
- Y** From Yasukawa potential to Yukawa potential 487
- Z** From Zeeman effect to Zundel ion 489
- A list and a presentation of Scientific Journals which contain the stem *Nano* in their title 493**
- Abbreviations for the scientific journals which appear as sources in the text 507**
- Appendix – main properties of intrinsic (or lightly doped) semiconductors 513**
