

## Contents

**Preface** *XI*

**List of Contributors** *XIII*

- 1 Exoplanet Observations** *1*  
*Jacob L. Bean*
- 1.1 Introduction *1*
  - 1.2 Orbital Properties *1*
    - 1.2.1 Orbital Periods and Eccentricities *2*
    - 1.2.2 Multiplanet Systems *6*
    - 1.2.3 Planets in Multiple Star Systems *8*
    - 1.2.4 Spin–Orbit Alignment *9*
  - 1.3 Physical Properties *11*
    - 1.3.1 Mass Distribution *11*
    - 1.3.2 Masses and Radii of Transiting Planets *13*
  - 1.4 Host Star Properties *15*
    - 1.4.1 Planet–Stellar Composition Correlation *16*
    - 1.4.2 Planet–Stellar Mass Correlation *19*
  - 1.5 Conclusion *21*
    - References *21*
    - Further Reading *25*
- 2 Pinpointing Planets in Circumstellar Disks** *27*  
*Alice C. Quillen*
- 2.1 Introduction *27*
  - 2.2 Signatures of Extrasolar Planets Imprinted on Dusty Disks *28*
  - 2.3 Morphological Features of Circumstellar Disks *29*
    - 2.3.1 Clearings *30*
    - 2.3.2 Spiral Arms *31*
    - 2.3.3 Clumps *31*
    - 2.3.4 Important Timescales *32*
  - 2.4 The Role of Mean Motion Resonances *34*

2.4.1	General Theory for First-Order Mean Motion Resonances	35
2.5	When are Spiral Density Waves Important?	38
2.5.1	The Chaotic Zone Boundary	38
2.6	Minimum Gap Opening Planet Masses	39
2.7	Fomalhaut	40
2.8	Summary	43
	References	43
<b>3</b>	<b>Planet–Planet Interactions</b>	<b>49</b>
	<i>Rory Barnes</i>	
3.1	Introduction	49
3.2	Review of Orbital Theory	49
3.2.1	Analytic Methods	50
3.2.1.1	Secular Theory	50
3.2.1.2	Resonant Interactions	53
3.2.2	<i>N</i> -Body Integrations	54
3.2.3	Dynamical Stability and Chaos	55
3.3	Distributions of Dynamical Properties	57
3.3.1	Types of Interactions	58
3.3.2	Frequency of Mean Motion Resonances	58
3.3.3	Apsidal Motion	59
3.3.4	Proximity to Dynamical Instability	60
3.4	Conclusions	64
	References	64
	Further Reading	70
<b>4</b>	<b>Formation via Disk Instability</b>	<b>71</b>
	<i>Lucio Mayer</i>	
4.1	Introduction–Basic Notions of Disk Instability	71
4.2	Simulations of Disk Instability	74
4.3	Disk Thermodynamics and Fragmentation	77
4.4	Beyond the Fragmentation Stage	80
4.4.1	Masses, Numbers, and Evolution of Clumps Produced by Fragmentation	80
4.4.2	Orbits and Orbital Evolution	85
4.5	Comparison with Solar and Extrasolar Giant Planets	86
4.5.1	From Gas Giants to Ice Giants and Super-Earths	86
4.5.2	Fragmentation around Different Stellar Types	87
4.5.3	The Correlation between Metallicity of Host Star and Planet Frequency	87
4.6	The Solid Content of Planets Formed by Disk Instability	89
4.7	Disk Formation and Disk Masses—a Key Issue	91
4.8	The Role of Stellar Companions and Interactions	93

4.9	Looking into the Future	94
	References	95
	Further Reading	98
<b>5</b>	<b>Core-accretion Model</b>	<b>101</b>
	<i>Olenka Hubickyj</i>	
5.1	Introduction	101
5.2	Historical Background of the Development of the Core Accretion Model	101
5.3	Observational Constraints	103
5.4	General Description of the Core-accretion Model	104
5.5	The Model and the Computer Code	105
5.5.1	The Code Components	106
5.5.2	The Code Boundary Conditions	108
5.5.3	The Code Assumptions	109
5.6	Results	110
5.6.1	Opacity	112
5.6.2	Core Mass	113
5.6.3	MMSN or not MMSN	115
5.7	Discussion	115
5.7.1	Migration	116
5.7.2	Metallicity	117
5.7.3	Observational Predictions for New Planets	118
	References	118
	Further Reading	122
<b>6</b>	<b>Formation of Terrestrial Planets</b>	<b>123</b>
	<i>Sean N. Raymond</i>	
6.1	Introduction	123
6.2	Setting the Stage: Protoplanetary Disks	124
6.3	Stages of Terrestrial Planet Growth	125
6.3.1	From Dust to Planetesimals	126
6.3.2	From Planetesimals to Planetary Embryos	127
6.3.3	From Planetary Embryos to Terrestrial Planets	132
6.4	Planetary Compositions and Habitability	134
6.4.1	Compositions of Terrestrial Planets	134
6.4.2	Prospects for Terrestrial and Habitable Planets in Exoplanet Systems	135
6.5	Conclusions	137
	Acknowledgments	138
	References	139
	Further Reading	143

<b>7</b>	<b>Brown Dwarfs</b>	145
	<i>Kevin L. Luhman</i>	
7.1	Introduction	145
7.2	Defining Brown Dwarfs and Giant Planets	145
7.3	Distinguishing between Brown Dwarfs and Giant Planets	146
7.4	Protoplanetary Disks around Brown Dwarfs	147
7.4.1	The Least Massive Objects with Disks	147
7.4.2	Disk Fractions and Lifetimes	148
7.4.3	Disk Compositions	150
7.4.4	Transitional Disks	151
7.4.5	Disk Radii and Masses	152
7.4.6	Implications of Disk Properties for Planet Formation	153
7.5	Searches for Planets around Brown Dwarfs	153
	References	154
<b>8</b>	<b>Exoplanet Chemistry</b>	157
	<i>Katharina Lodders</i>	
8.1	Introduction	157
8.2	A Goodly Gallery of Planets	157
8.3	Elemental Ingredients of Planets	160
8.3.1	Diagnostics from Elemental Abundance Fractionations	161
8.4	Planetary Building Blocks	162
8.5	Similarities between Gas-Giant Planets and Brown Dwarfs	169
8.5.1	Chemistry in Gas-Giant Planets	173
8.5.2	Condensate Clouds	176
8.5.3	The Effects of Varying the C/O Ratio on Gas-Giant Planet Chemistry	181
8.5.3.1	Gas Chemistry Variations through Changes in C/O Ratio	181
8.5.3.2	Possible Scenarios to Alter C/O Ratios during Planetary Formation	182
8.6	Outlook	183
	Acknowledgments	184
	References	184
	Further Reading	186
<b>9</b>	<b>Migration and Multiplicity Effects During Giant Planet Formation</b>	187
	<i>Edward W. Thommes</i>	
9.1	Introduction	187
9.2	Type I Migration	188
9.3	Type II Migration	191
9.4	“Exotic” Migration Scenarios	192
9.5	Planet–Planet Interactions During Migration	193
9.6	From Disk to Planets: Putting the Pieces Together	194
9.7	Summary and Discussion	199
	References	200

<b>10</b>	<b>Planets in Mean-Motion Resonance</b>	<b>203</b>
	<i>Wilhelm Kley</i>	
10.1	Introduction	203
10.2	Extrasolar Systems in Mean-Motion Resonance	203
10.3	Planetary Migration	207
10.3.1	Planet–Disk Interaction	207
10.4	Resonant Capture through Convergent Migration	209
10.4.1	Hydrodynamical Studies	209
10.4.2	Forced Migration	212
10.5	Matching Observed Systems	213
10.5.1	GJ 876: A Case of Adiabatic Migration	213
10.5.2	Formation of Systems HD 128311 and HD 73526 through Mixed Scenarios	214
10.5.3	Capture in 3:2 Resonance	216
10.5.4	Destruction of Resonances	217
10.6	Summary	217
	Acknowledgments	218
	References	218
	Further Reading	222
<b>11</b>	<b>Planet–Planet Gravitational Scattering</b>	<b>223</b>
	<i>F. Marzari</i>	
11.1	Introduction	223
11.2	Onset of Instability in Multiplanet Systems: the Gas-Free Scenario	224
11.2.1	The Stability Limit	224
11.2.2	Planet–Planet Scattering Dynamics	227
11.2.3	Tidal Interaction with the Star and Formation of “Hot” Jupiters	231
11.2.4	Kozai Oscillations	231
11.3	Planet–Planet Scattering in Presence of the Gas Disk	232
11.4	Planet–Planet Scattering in Binary Stars	237
11.5	Summary	239
	References	240
	Further Reading	241
<b>12</b>	<b>Tides and Exoplanets</b>	<b>243</b>
	<i>Brian Jackson, Rory Barnes, and Richard Greenberg</i>	
12.1	Introduction	243
12.2	Tidal Physics	244
12.3	Tidal Effects on Gaseous Exoplanets	249
12.3.1	Orbital Evolution	249
12.3.2	Tidal Heating	252
12.4	Tidal Effects on Rocky Exoplanets	253
12.4.1	Orbital Evolution and Habitability	254
12.4.2	Effects of Tidal Heating	255
12.4.3	Rotation and Habitability	259
