List of Contributors *XV*

### Volume 1 Silicon Carbide: Growth, Defects, and Novel Applications

#### Part A Growth of SiC

**1 Bulk growth of SiC – review on advances of SiC vapor growth for improved doping and systematic study on dislocation evolution 1**

*Sakwe Aloysius Sakwe, Mathias Stockmeier, Philip Hens, Ralf Müller, Desirée Queren, Ulrike Kunecke, Katja Konias, Rainer Hock, Andreas Magerl, Michel Pons, Albrecht Winnacker, and Peter Wellmann*

- 1.1 Introduction 1
- 1.2 Experiments 2
- 1.3 Results and discussions 7
- 1.4 Spatial distribution of dislocations in SiC 26
- 1.5 Conclusions 28
- References 29

**2 Bulk and epitaxial growth of micropipe-free silicon carbide on basal and rhombohedral plane seeds 33**

*Boris. M. Epelbaum, Octavian Filip, and Albrecht Winnacker*

- 2.1 Introduction 33
- 2.2 Search for stable rhombohedral facets in 6H- and 4H-SiC 35
- 2.3 PVT growth of bulk 6H- and 4H-SiC on rhombohedral (011 $\bar{n}$ ) facets 36
- 2.4 Homoepitaxial Liquid Phase Epitaxy growth on basal and rhombohedral plane seeds 43
- 2.5 Conclusions 59
- References 60

*Silicon Carbide, Vol. 1: Growth, Defects, and Novel Applications*

Edited by Peter Friedrichs, Tsunenobu Kimoto, Lothar Ley, and Gerhard Pensl

<b>3</b>	<b>Formation of extended defects in 4H-SiC epitaxial growth and development of a fast growth technique</b> 63 <i>Hidekazu Tsuchida, Masahiko Ito, Isaho Kamata, and Masahiro Nagano</i>
3.1	Introduction 63
3.2	Experimental 64
3.3	Formation of extended defects in 4H-SiC epitaxial growth 65
3.4	Fast epitaxial growth of 4H-SiC 88
3.5	Conclusions 92
	References 93
<b>4</b>	<b>Fabrication of high performance 3C-SiC vertical MOSFETs by reducing planar defects</b> 95 <i>Hiroyuki Nagasawa, Masayuki Abe, Kuniaki Yagi, Takamitsu Kawahara, and Naoki Hatta</i>
4.1	Introduction 95
4.2	Reduction of planar defects in 3C-SiC 96
4.3	Performance of vertical MOSFETs 106
4.4	Conclusions 111
	References 112
<b>Part B</b>	<b>Characterization of Defects and Material Properties</b>
<b>5</b>	<b>Identification of intrinsic defects in SiC: Towards an understanding of defect aggregates by combining theoretical and experimental approaches</b> 115 <i>Michel Bockstedte, Adam Gali, Alexander Mattausch, Oleg Pankratov, and John W. Steeds</i>
5.1	Introduction 115
5.2	Assessing the identity of defects in SiC 116
5.3	Vacancy-related defects 119
5.4	Vacancy aggregation and its consequences 131
5.5	Carbon interstitial-related defects and high-frequency vibrations 133
5.6	The carbon aggregation and its implications 140
5.7	Summary and outlook 142
	References 143

- 6 EPR identification of intrinsic defects in SiC 147**  
*J. Isoya, T. Umeda, N. Mizuochi, N. T. Son, E. Janzén, and T. Ohshima*
- 6.1 Introduction 147  
6.2 Isolated vacancy 152  
6.3 Pulsed ELDOR of  $T_{V2a}$ : Observation of missing central line 162  
6.4 Divacancy 168  
6.5 Antisites and antisite–vacancy pairs 172  
6.6 Conclusion 176  
References 177
- 7 Electrical and topographical characterization of aluminum implanted layers in 4H silicon carbide 181**  
*Martin Rambach, Anton J. Bauer, and Heiner Ryssel*
- 7.1 Introduction 181  
7.2 Experimental 182  
7.3 Electrical characterization 183  
7.4 Topographical characterization 193  
7.5 Summary 201  
References 202
- 8 Optical properties of as-grown and process-induced stacking faults in 4H-SiC 205**  
*Jean Camassel and Sandrine Juillaguet*
- 8.1 Introduction 205  
8.2 Structural aspects 206  
8.3 Imaging techniques 210  
8.4 Optical SFs signature 216  
8.5 More realistic type-II QW model 224  
8.6 Transfer matrix method 232  
8.7 Focussing on a single QW 237  
8.8 Conclusions 239  
References 240
- 9 Characterization of defects in silicon carbide by Raman spectroscopy 243**  
*Martin Hundhausen, Roland Püsche, Jonas Röhl, and Lothar Ley*
- 9.1 Introduction 243  
9.2 Experimental setup 243  
9.3 Polytype conversion in 3C-SiC grown by chemical vapor deposition 244

VIII | Contents

- 9.4 Electronic Raman studies of shallow donors in silicon carbide 253
- 9.5 Graphene layers on SiC-surfaces 259
- 9.6 Summary 264  
References 265
  
- 10 Lifetime-killing defects in 4H-SiC epilayers and lifetime control by low-energy electron irradiation 267**  
*Tsunenobu Kimoto, Katsunori Danno, and Jun Suda*
- 10.1 Introduction 267
- 10.2 Experimental 268
- 10.3 Results and discussion 269
- 10.4 Conclusion 284  
References 285
  
- 11 Identification and carrier dynamics of the dominant lifetime limiting defect in n<sup>-</sup> 4H-SiC epitaxial layers 287**  
*Paul B. Klein*
- 11.1 Introduction 287
- 11.2 Defects in 4H-SiC epilayers 290
- 11.3 Identification of the lifetime killer 297
- 11.4 Carrier dynamics at the Z<sub>1/2</sub> defect 302
- 11.5 Summary 314  
References 315
  
- 12 Optical beam induced current measurements: principles and applications to SiC device characterization 319**  
*Christophe Raynaud, Duy-Minh Nguyen, Nicolas Dheilily, Dominique Tournier, Pierre Brosselard, Mihai Lazar, and Dominique Planson*
- 12.1 Introduction 319
- 12.2 Theory and principle of OBIC: calculation of the current 320
- 12.3 Description of the experimental set-up 328
- 12.4 Study of device termination technique 329
- 12.5 Determination of carrier lifetime 333
- 12.6 Determination of ionization coefficients 336
- 12.7 Conclusion 340  
References 340

- 13 Measurements of impact ionization coefficients of electrons and holes in 4H-SiC and their application to device simulation 341**  
*Tetsuo Hatakeyama*
- 13.1 Introduction 341
- 13.2 Experiments 343
- 13.3 Modeling of anisotropic impact ionization coefficients 348
- 13.4 Application to device simulation of power devices 352
- 13.5 Summary and conclusions 356
- Appendix A: Interpolation formula for anisotropic impact ionization coefficients 357
- Appendix B: Scaling properties in the design of power devices 359
- References 360
- 14 Analysis of interface trap parameters from double-peak conductance spectra taken on N-implanted 3C-SiC MOS capacitors 363**  
*Michael Krieger, Svetlana Beljakowa, Lia Trapaidze, Thomas Frank, Heiko B. Weber, Gerhard Pensl, Naoki Hatta, Masayuki Abe, Hiroyuki Nagasawa, and Adolf Schöner*
- 14.1 Introduction 363
- 14.2 Experimental 363
- 14.3 Experimental results 365
- 14.4 Model 367
- 14.5 Discussion 370
- 14.6 Summary 373
- References 374
- 15 Non-basal plane SiC surfaces: Anisotropic structures and low-dimensional electron systems 375**  
*Ulrich Starke*
- 15.1 Introduction 375
- 15.2 Crystal structure and bulk truncated surface termination 376
- 15.3 Experimental procedures 379
- 15.4 Hydrogen etching 379
- 15.5  $a$ -plane and  $m$ -plane surfaces 381
- 15.6 Surface phases on SiC (1  $\bar{1}$ 02) 383
- 15.7 The SiC( $\bar{1}$ 10 $\bar{2}$ ) surface 391
- 15.8 Summary 391
- References 392

**Part C Novel Applications**

**16 Comparative columnar porous etching studies on n-type 6H SiC crystalline faces 395**  
*Yue Ke, Robert P. Devaty, and Wolfgang J. Choyke*

- 16.1 Introduction 395
- 16.2 Experimental 395
- 16.3 Results and discussion 397
- 16.4 Summary 407
- References 408

**17 Micro- and nanomechanical structures for silicon carbide MEMS and NEMS 411**  
*Christian A. Zorman and Rocco J. Parro*

- 17.1 Introduction 411
- 17.2 Single crystalline SiC 412
- 17.3 Polycrystalline SiC 427
- 17.4 Amorphous SiC 436
- 17.5 Conclusions 444
- References 445

**18 Epitaxial graphene: a new material 453**  
*Th. Seyller, A. Bostwick, K. V. Emtsev, K. Horn, L. Ley, J. L. McChesney, T. Ohta, J. D. Riley, E. Rotenberg, and F. Speck*

- 18.1 Introduction 453
- 18.2 Experimental aspects 455
- 18.3 Comparison of graphene and FLG on SiC(0001) and SiC (000 $\bar{1}$ ) 457
- 18.4 Band structure of FLG near the K-point 462
- 18.5 Summary and outlook 468
- References 468

**19 Density functional study of graphene overlayers on SiC 473**  
*Oleg Pankratov and Alexander Mattausch*

- 19.1 Introduction 473
- 19.2 Method 478
- 19.3 Structural properties 479
- 19.4 Electronic structure 482
- 19.5 Conclusions 489
- References 490

**Index 493**
