

Don't get left behind - Start using Phenyx today!

GENEBIO PHENYX

Phenyx is GeneBio's renowned software platform for the identification and characterization of proteins and peptides from mass spectrometry data. Phenyx goes far beyond single search engine capabilities:

Advanced result comparison tool - Increase your chance to cope with the heterogeneity of your results:

- Combine/compare/validate multiple runs and results from Phenyx or other search engines (Mascot, SEQUEST, and XITandem) in one single interface
- Visualize runs in various levels of granularity (protein groups, proteins, peptides, and interpreted spectra)
- Align proteins from searches in different databanks
- Link to dynamic views, graphics and reports
- One-click export for quick publication

One result, many export possibilities:

- Access original XML and text Phenyx files
- Export as XML or a complete four-page spreadsheet report
- Export full Phenyx results for archiving

Quick result sharing - Export your results and share them with clients, colleagues and partners:

- Core facilities, service labs and any users can now provide a quick and professional solution to share reports and results with third parties
- With one click you can assign a result to another user along with different levels of permission (read-only the result, re-submission...)
- Also available for Mascot, SEQUEST, and XITandem results

Plug Phenyx into any proteomics pipeline:

- Create reports that integrate with third-party software (Scaffold, TPP, MSight, etc.)
- Generate customized reports that incorporate external parsers, statistics and other post-processing software
- Possibility to automate import and export activities for transparent data flow in your lab
