ADVANCED ENGINEERING MATERIALS

Profile:

Advanced Engineering Materials is an international journal published by Wiley-VCH in close cooperation with the German, Swiss and French Materials Societies, DGM, SVMT and SF2M.

This interdisciplinary journal appears twelve times a year and deals with all aspects of modern engineering materials such as metals, alloys, composites, ceramics, plastics, and innovative processing methods. The scientific content comprises a mix of reviews, communications and research news. This is supplemented by news from industry, academia, politics (in particular research politics), etc. and is further enhanced by such useful information as book reviews, product news and a conference calendar.

New: Advanced Biomaterials

Advanced Biomaterials, edited by Klaus D. Jandt, Uni. Jena, GER, is an international, interdisciplinary forum of original peer-reviewed contributions in the area of biomaterials used in medicine or biological engineering. Starting in autumn 2008, the new section will be issued initially four times per year in *Advanced Engineering Materials*.
